

Postal Service Technical Specification

Mail.dat

Version 4
Release 38, 39, 40

February 6, 2015

PREFACE

This document is a comprehensive technical guide that outlines steps for exchanging electronic data with the *PostalOne!*[®] system using the Mail.dat[®] file format. The intended audience is business mailers who create or use mailing data in the preparation or production of business mail and who also want to conduct business electronically in lieu of the hardcopy forms and processes that were traditionally used in business mail acceptance. For the purpose of conduct business electronically although this technical specification provides an overview of the *PostalOne!* system, the intended recipient of this document is the person or team that will make necessary technical infrastructure preparations/alterations and conduct testing to ensure Mail.dat electronic data is consistently and reliably sent to the *PostalOne!* system. This document only discusses this form of electronic data exchange.

This technical specification is organized as follows: Section 1 provides an overview of the *PostalOne!* program benefits, the basic requirements for participation in the program, and how to apply for participation. Chapters 2 and 3 provide detailed technical information about the *PostalOne!* application. Section 1.6 provides information on who to contact for help. Sections 4, and 5 contain technical information about the electronic data used by or returned by the system. Section 11 contains error messages. Section 6 details how to perform necessary Periodicals calculations, Section 7 notes issues specific to Customer/Supplier Agreement (CSA) contracts, and Section 8 includes mappings of the Mail.dat input to the postage statements.

On behalf of the *PostalOne!* team, we welcome you into the program. You will be joining many other business mailers who are successfully using the *PostalOne!* system to improve the collaboration with the U.S. Postal Service[®]. We welcome your feedback and look forward to working with you.

Document Changes	xi
1. Program Overview	1
1.1 IDEAlliance and USPS.....	1
1.2 Releases Addressed.....	1
1.3 PreProduction Environment.....	2
1.4 Test Environment for Mailers (TEM).....	2
1.5 Production Environment.....	2
1.5.1 Interfacing with Mail.XML.....	2
1.6 PostalOne! System Help Desk	2
2. <i>PostalOne!</i> Mail.dat Client Software	3
2.1 Installation and Configuration	3
2.1.1 Overview of the <i>PostalOne!</i> Mail.dat Client.....	3
2.1.2 System Requirements	3
2.1.3 Performance Considerations	4
2.1.4 <i>PostalOne!</i> Mail.dat Client Memory Settings	4
2.1.5 How Much Memory to Allocate.....	4
2.1.6 How to Allocate More Memory	5
2.1.7 Troubleshooting Memory Allocation	6
2.1.8 Sources for Information on Memory Allocation	6
2.1.9 Mail.dat Client 64 Bit Mode.....	6
2.1.10 How to Use a Web Proxy	7
2.1.11 Batch Client Automatic Updates.....	9
2.1.12 Supporting Multiple <i>PostalOne!</i> Environments.....	9
2.1.13 Installation (Windows and Solaris UNIX).....	9
2.2 Program Setup For Windows.....	10
2.2.1 General Settings Tab.....	12
2.2.2 Program Updates.....	12
2.3 Transferring Files Manually.....	12
2.3.1 Validating Files	12
2.3.2 Validation Log Errors	12
2.3.3 Performing the File Transfer Manually	13
2.3.4 Additional Logging	14
2.4 Batch Processing	15

2.4.1 Batch Mode	15
2.4.2 Receipt Polling	15
2.4.3 Status Receipt File Naming	16
2.4.4 Setting Up the <i>PostalOne!</i> Windows Mail.dat Client to Work in Batch Mode	16
2.4.5 Receipt Polling Configuration	18
2.4.6 References	21
3. Mail.dat File Definitions	26
3.1 File Naming Conventions	27
3.2 Files Not Supported	27
4. Sending Properly Configured Mail.dat Files	28
4.1 Key Technical Requirements	28
4.1.1 Internet Connection	28
4.1.2 Formatted Mail.dat files	29
4.1.3 Methods of Transferring Files (Manual and Batch)	29
4.1.4 Batch mode for Mail.dat 13-1 and later	29
Customers must download and configure the new software client. See Section 2 <i>PostalOne!</i> Mail.dat Client Software for instructions to download the <i>PostalOne!</i> Mail.dat Client used for all versions of Mail.dat in batch mode. When using batch mode, the <i>PostalOne!</i> servers return file transfer status feedback to the senders workstation automatically. The feedback information (receipt file) is written to the client's workstation in either XML or ASCII text formats. A third format, enhanced XML, is supported. The receipt files may be loaded into a spreadsheet or your own database for storage and viewing. For more information on the receipt file format and its contents, see Status Receipt File Layout, Section 9.	
4.1.5 Technical/Operational Prerequisites	29
4.2 Configuring Mail.dat files for Processing	31
4.2.1 Mail.dat Submission Process	31
4.2.2 Seamless Acceptance	32
4.2.3 Required Files and Fields	33
4.2.4 Relationship Constraints Description	34
4.2.5 Copalletization Validation Constraints	45
4.2.6 MLOCR Validation Constraints	48
4.2.7 Mail Anywhere	49
4.2.8 Periodicals Validations	49
4.2.9 Full-service	56
4.2.10 Flats Sequencing System (FSS) Preparation	59
4.2.11 Unsupported Mailing Cases	63
4.2.12 Simple Mailing Constraints	64
4.2.13 Shipping Services File Generation	64
4.2.14 Start-the-Clock	66
4.2.15 Value Added Refunds (VAR)	69
4.3 Postage Payment	69
4.3.1 Postage Statement Generation	69

DOCUMENT CHANGES

The Change History Logs for Previous versions are found in the Section 12, Change History Archive.

Section	Title	Release Functionality	Description
4.2.4.5	Incentives	40/January	Removed references to 2014.
4.2.14	Start-the-Clock	40/January	Added a new section for start-the-clock functionality
4.2.15	Value Added Refunds	40/January	Added a new section that describes eDoc fields to populate in order to generate a VAR transaction
5.1	Header Record (HDR)	40/January	Removed “required” from .hdr Licensed Users Job Number field
5.2	Segment Record (SEG)	40/January	Added more information regarding Move Update Method – SM and FC
11	Error Messages	40/January	Modified: 4676 to include W = Science of Agriculture Limited Circulation

1. Program Overview

The *PostalOne!*[®] system is an electronic suite of services being developed for business mailers by the United States Postal Service[®] to dramatically improve the mailing process. The system takes advantage of the advances in technology and leverages them to significantly improve and simplify the mailing experience.

One of the ways the system enables customers to electronically send detailed information is using the mailing industry's standardized Mail.dat[®] format. Customers using Mail.dat files no longer have to complete manual qualification reports (standardized documentation) or postage statements because these can be automatically generated by the *PostalOne!* System using the information in the Mail.dat files. Much of the acceptance and verification process has been automated, enabling a faster and more accurate method of verifying, accepting, and finalizing postage statements.

Applying for and obtaining access to the *PostalOne!* System is quick and easy. For information on how to apply and obtain access see the User Access to Electronic Mailing Information and Reports Guide available on RIBBS at Intelligent Mail Guides & Technical Specifications.

Customers with access to the *PostalOne!* system can download the estimated postage, view individual postage statements within a mailing, see a running total of postage statement activity, and view the reconciliation of the information at the end of a mailing information exchange process (mailing job). By automating and incorporating payment processing into the *PostalOne!* System, payments for mailing jobs can be electronically processed with local trust accounts, Centralized Account Payment System (CAPS) trust accounts or CAPS debit accounts. See [Centralized Account Processing System](#) website for more information on CAPS.

1.1 IDEAlliance and USPS

IDEAlliance is a not-for-profit membership organization. IDEAlliance advances core technology to develop standards and best practices to enhance efficiency and speed information across the end-to-end digital media supply chain – creation, production, management, and delivery of knowledge-based multimedia content – digitally and in print

The Mail.dat File Specification is a key document from IDEAlliance. A nonprofit organization, IDEAlliance charges a nominal fee to license the file specification. The fee covers the costs of changes, updates, printing, and notifications to customers. The current copy of the Mail.dat specification is available to download at [IDEAlliance Mail.dat Specifications](#).

The IDEAlliance Mail.dat Working Group collaborates with the Postal Service to find solutions for new business needs in future releases. All Mail.dat licensees may participate in the Mail.dat Discussion Forum on the [IDEAlliance](#) collaborative Web site. Any *PostalOne!* system user may join the Mailers Technical Advisory Committee (MTAC) User Group 1 for the *PostalOne!* system, SASP and Intelligent Mail, by contacting the leaders of the group.

1.2 Releases Addressed

This technical specification version covers the following *PostalOne!* releases and Mail.dat versions. Detailed information about the Mail.dat Versions used for each *PostalOne!* release is available at [USPS[®] Support of IDEAlliance[®] Specifications](#) on RIBBS.

Date	Release	Mail.dat Versions Available
August 2014	38	13-1 (updates), 14-1 and 14-2
October 2014	39	14-1 and 14-2
January 2015	40	14-1 and 14-2

Table 1-1 Releases and Mail.dat Versions

Date in 2014	Mail.dat Versions
August 24th and onwards	<ul style="list-style-type: none">14-1 (new submissions and updates) Aside from the statement products and new pricing structure changes introduced in 14-2, all prices currently supported in 14-1 will continue to be supported.14-2 (new submissions and updates) New statement pricing products and new pricing structure changes. The .csm Postage Statement Mailing date must be on or after the price change date (September 7th)

This technical specification discusses Mail.dat versions 14-1, and 14-2 which support the full-service option.

All Mail.dat versions use the same upload client as described in Section 2, *PostalOne!* Mail.dat Client Software.

Mailers must successfully complete testing Mail.dat, 14-1, and 14-2 in the Test Environment for Mailers (TEM), before files can be submitted in the Production Environment.

1.3 PreProduction Environment

This environment will contain pre-release software and is intended for mailer testing software development testing with production data. This environment will be available typically one month prior to Production and TEM release using a different client download from both TEM and Production.

1.4 Test Environment for Mailers (TEM)

This environment is part of the software approval process for all mailers prior to moving into the production environment. Mailers must work with the *PostalOne!* Help Desk to start the approval process for their software, and must be approved in the TEM environment, prior to sending Mail.dat transactions to the Production environment. For further information, see the Test Environment for Mailers: Checklist and Troubleshooting Guide, available on RIBBS at [Intelligent Mail Guides & Technical Specifications](#).

1.5 Production Environment

This environment will be used by all customers that have been approved in the TEM environment by the USPS to start sending Mail.dat transactions for postage payment.

1.5.1 Interfacing with Mail.XML

The Mail.dat files may be used with some full-service and profile management Mail.XML messages. See the Postal Service Mail.XML Technical Specification for Profiles and Full-service Feedback (MID-CRID), available on [Intelligent Mail Guides & Technical Specifications](#).

Mail.dat files may be used with some postage payment-related Mail.XML messages. See the Postal Service Mail.XML Technical Specification for Postage Payment and Reporting (eDoc), available on [Intelligent Mail Guides & Technical Specifications](#).

The Transportation Management functions of the *PostalOne!* system provides users with the ability to make surface and air transportation assignments, and to route mail in the mailers own plant. This capability is a great benefit to many of the larger First-Class Mail® customers because they can track mailings more accurately with detailed routing information. This capability includes, but is not limited to, information found in Mail.dat files.

Mail.dat files may be used with Mail.XML to schedule appointments. See the Postal Service Mail.XML Technical Specification for Appointment Scheduling (FAST), available on [Intelligent Mail Guides & Technical Specifications](#).

1.6 PostalOne! System Help Desk

The *PostalOne!* program has a staffed *PostalOne!* System Help Desk to assist customers who may have questions or need assistance with a problem or technical issue with the *PostalOne!* system. The *PostalOne!* System Help Desk is available Monday through Friday from 8:00 a.m. to 5:00 p.m., CST, and can be contacted via e-mail or telephone. The phone number below is available for after-hours assistance with some issues. Our after-hours staff will forward unresolved issues to the *PostalOne!* System Help Desk at the beginning of the next workday.

PostalOne! System Help Desk Telephone (800) 522-9085

PostalOne! System Help Desk e-mail postalone@email.usps.gov

If you experience any difficulties when using the *PostalOne!* systems, have questions, or need more information about the *PostalOne!* system, contact the *PostalOne!* System Help Desk. Your calls will be answered by the *PostalOne!* System Help Desk in a priority order, with preference given to fully enrolled customers having a signed *PostalOne!* user agreement on file.

If you have comments or suggestions regarding this technical specification, e-mail the *PostalOne!* System Help Desk.

2. PostalOne! Mail.dat Client Software

2.1 Installation and Configuration

2.1.1 Overview of the *PostalOne! Mail.dat Client*

The *PostalOne! Mail.dat Client Software* is used to validate and upload Mail.dat files to the *PostalOne!* system. All file versions must use the Mail.dat Client Software described in detail in this section. By doing most of the validation at the mailers site, it can reduce the workload of the servers and improve end-to-end processing time. It will also give mailers an earlier indication of problems with their Mail.dat files so they can be corrected before uploading. The Windows version of the *PostalOne! Mail.dat Client* has a user interface that allows mailers to select files for validation and uploading as well as viewing validation errors and file statuses. In Windows and Solaris UNIX, it can also be operated in batch mode to provide automated validation and uploading as well as status receipt polling. Unlike the previous batch upload program, the *PostalOne! Mail.dat Client* does not need a SSL Certificate to do batch processing.

Currently, there are separate versions of the program for the TEM and Production Environments. The letters after the program version on the title bar will indicate which environment the *PostalOne! Mail.dat Client* is communicating with. Mailers can install multiple versions of the *PostalOne! Mail.dat Client* on a computer to support multiple environments. Care should be taken to process production jobs in the Production environment.

Note: Participants must successfully transfer version 14-1, 14-2 Mail.dat files to the Testing Environment for Mailers (TEM) *PostalOne! System* before transferring Mail.dat files to the Production *PostalOne! System*.

2.1.2 System Requirements

Operating Systems Supported:

Microsoft Windows 2000 Professional, Windows XP, Microsoft Server 2000, Windows 7

Sun Solaris x 86: 32 bit versions 8, 9 or 10

Sun Microsystems' Java 2 Runtime Environment, Standard Edition or Java 2 SDK, Standard Edition, versions 1.6 or greater ([Oracle Products - Java](#)) – this download supplies the installation and the batch files that invoke the program that will set search paths to the supplied version.

Internet Requirements: a fast continuous connection to the Internet is required with port 443 available. The faster the upload speed, the faster the data will reach *PostalOne!*

Note: These memory requirements are for a single instance of the program; when validating multiple simultaneous jobs, use the sum of all net sizes to estimate memory requirements.

JVM HeapSize	Recommended Sun HotSpot JVM Options	Recommended HP/IBM JVM Options
512 MB	-Xms512m -Xmx512m -XX:NewSize=256m -XX:MaxNewSize=256m	-Xms512m -Xmx512m -XX:NewRatio=2
1024 MB	-Xms1024m -Xmx1024m -XX:NewSize=512m -XX:MaxNewSize=512m	-Xms1024m -Xmx1024m -XX:NewRatio=2
2048 MB	-Xms2048m -Xmx2048m -XX:NewSize=1024m -XX:MaxNewSize=1024m	-Xms2048m -Xmx2048m -XX:NewRatio=2
4096 MB and above	-Xms4096m -Xmx4096m -XX:NewRatio=2	-Xms4096m -Xmx4096m -XX:NewRatio=2

Table 2-1 JVM Option Recommendations for Different JVM Heaps

2.1.2.1 Using Sun Hotspot JVM only

Please note changes in JVM Settings for optimal performance. Windows users can check available memory in the Performance tab of Task Manager. See Options for usage examples.

The Mail.dat client includes Java Runtime Environment (JRE) version 1.6 update 30. Users who modified their configuration to use alternate JREs should apply these changes again after installing the new version of the client. Users utilizing the Solaris version of the Mail.dat client must ensure they have downloaded and installed version 1.6 update 30.

NOTE: Users utilizing the Solaris version of the Mail.dat client must ensure they have downloaded and installed version 1.6 update 30. The version can be downloaded from [Oracle, Java Archive Downloads](#)

2.1.3 Performance Considerations

The speed of the validation process will depend on the amount of available system memory (not disk space), CPU speed and CPU type. If you are using separate instances of the *PostalOne!* Mail.dat Client to concurrently validate multiple files, each instance (in Windows) can use up to 2 GB of RAM and CPU count may impact performance as well. The speed of the upload process will depend on the upload speed of your Internet connection. Many Internet service providers provide much faster download speeds than upload speeds and it is the upload speed that counts. If you need to improve validation speeds, you can upgrade your computer. If you need to improve file transfer speeds, you can upgrade your Internet connection.

This program can also be run on multiple workstations at a mailers site, but each workstation must have its own log file.

The Mail.dat client can be run in a Graphical User Interface (GUI for manual upload) or in batch mode. The deployment package comes with separate scripts to run the appropriate mode. It's recommended to use the GUI mode for relatively smaller submissions on windows desktops. Use the batch upload for larger submissions and more efficient processing from windows desktops or UNIX machines. Below are some general guidelines that can be followed for choosing which mode to operate in.

Mail.dat Job Characteristics	Recommendation
Contains less than 500,000 PDR records	Use GUI or Batch
Contains less than 100,000 PQT records	Use GUI or Batch
Contains less than 100,000 CQT records	Use GUI or Batch
Contains greater than 500,000 PDR records	Use Batch for efficient processing
Contains greater than 100,000 PQT records	Use Batch for efficient processing
Contains greater 100,000 CQT records	Use Batch for efficient processing

Table 2-2 PDR, PQT, and CQT and Requirements for Optimum Performance

2.1.4 *PostalOne!* Mail.dat Client Memory Settings

The *PostalOne!* Mail.dat Client Application is written in Java and runs on the Java Virtual Machine, which is a program that runs on several operating systems including Microsoft Windows, Solaris, MacOS, and Linux. The Java Virtual Machine is allocated a chunk of memory by the host operating system.

Memory allocated to Java is used mostly for heap, which can be thought of as scratch space, where variables (copies of data) are temporarily held while work is done on them. If there is not enough memory available to the application, such as when processing a very large job with a lot of records, the program may run very slowly, and could run out of memory before completing validation of your files. If Java runs out of memory, the application will halt in the middle of whatever its doing and die. If this happens, you need to try to allocate more memory to the application and attempt to validate your job all over again.

The *PostalOne!* Mail.dat Client Application ships with a default heap setting of 512 megabytes. This amount of memory should be sufficient for most small-to-medium size Mail.dat jobs processed using the Mail.dat client in GUI mode. However, larger jobs can require more memory. Unfortunately, there is no hard and fast rule of thumb for determining how much memory to allocate to process a particular job - it all depends.

2.1.5 How Much Memory to Allocate

If you have two gigabytes or more of physical RAM in your workstation, and are not running many other applications, allocate a full gigabyte to the Mail.dat Client. If you have only one gigabyte of RAM, you probably won't be able to allocate more than the default of 512 megabytes.

The amount of memory you can allocate to Java is limited by the amount of available memory on your PC and by the architecture of your hardware. Most desktop PCs use a 32 bit architecture, which means that the size of a memory address is 32 bits. This means that each application running on your computer could theoretically address up to four gigabytes (two to the power of 32) of memory, with each memory location containing one byte. However, other factors limit this to a much smaller amount of memory (the operating system itself, as well as resources needed by the Java virtual machine). This means that the maximum you could reasonably allocate to Mail.dat client on a standard (32-bit) PC is one and a half gigabytes (-Xmx1536m). Some computers accommodate a size of a memory address that is 64 bits. In this case there is the option to use the 64 bit memory. The instructions for this are in Section 2.1.9 Mail.dat Client 64 Bit Mode.

It's best to try to allocate only as much memory as you will need, to allow for a little breathing room on your workstation. If you regularly run large data sets and have at least two gigabytes of RAM, try allocating one gigabyte to the application and only increase it to one and a half if you find that a gigabyte isn't sufficient.

If you are able to allocate a gigabyte (and doing so enables your large jobs to be processed), but your machine acts sluggish, you might try scaling back your heap allocation to 768 megabytes (the setting for this is -Xmx768m).

On the other hand, if a gigabyte and a half still is not enough, and you're running the application in GUI mode, try running the application in batch mode, which uses memory more efficiently (the user-friendly interface eats up a fair amount of memory).

The Mail.dat client is designed to handle high volume processing before the files are transferred to *PostalOne!* providing quick turnaround on validation errors that may occur on the submitted files. For jobs containing large numbers of PDR, PQT or CQT records, more memory may be required for processing efficiently. The Mail.dat client scripts come with a few predefined heap configurations to choose from. With larger jobs it's recommended a higher heap configuration is used. Some of these configurations may require moving to a 64-bit operating system that supports larger memory allocation. That will speed up very large submissions and make a significant improvement in processing time.

The following table contains minimum recommended heap configuration and RAM for processing Mail.dat files

Mail.dat Job Characteristics	JVM Heap Setting	Minimum Free RAM
Up to 500,000 PDR records	1024MB	2GB
500,000 – 2 Million PDR records	2048MB	3GB
2 – 5 Million PDR records	3072MB	4GB
5 – 10 Million PDR records	4096MB	5GB
Up to 100,000 PQT records	1024MB	2GB
Up to 500,000 PQT records	2048MB	3GB
1 – 2 Million PQT records	3072MB	4GB
2 – 3 Million PQT records	7168MB	8GB
4 – 5 Million PQT records	11G	12GB
Up to 100,000 CQT records	1024MB	2GB
Up to 500,000 CQT records	2048MB	3GB
1 – 2 Million CQT records	3072MB	4GB

Table 2-3 PDR, PQT, and CQT and Memory for Optimum Performance

A combination of any of the job characteristics will require additional heap for efficient processing.

2.1.6 How to Allocate More Memory

To allocate more memory to the Java virtual machine, you need to pass it two parameters - the initial heap size (-Xms) and the maximum heap size (-Xmx). This is done by editing the .bat file that you use to launch the application, which may be done using any text editor such as Notepad, Textpad, Notepad++, and so forth. Do not use Microsoft Word or any other word processor – use an editor designed for editing plain text.

The easiest way to go about this is to use one of the preset memory configurations defined in the .bat file.

1. First, disable the default memory settings. Open the .bat file and find the line that starts with

SET MEMALLOC= -Xms64m -Xmx512m

2. Change that line to read

REM SET MEMALLOC= -Xms64m -Xmx512m

3. Next, enable a somewhat larger memory configuration: find the line that reads

REM SET MEMALLOC= -Xms512m -Xmx1024m

4. Delete the REM so that the line now reads:

SET MEMALLOC= -Xms512m -Xmx1024m

5. Now save the .bat file (File>Save), close the text editor, and try running the application again.

2.1.7 Troubleshooting Memory Allocation

If the Mail.dat client still runs out of memory after setting your maximum heap size, double-check your settings.

A common mistake is to introduce spaces where there shouldn't be spaces. Another one is leaving off the memory unit indicator (m or M for megabyte, g or G for gigabyte), or using an incorrect indicator.

Example	Problem	Corrected Version
-Xmx768	missing memory unit indicator	should read -Xmx768m
-Xmx 768m	extra space	should read -Xmx768m
-Xmx768 m	extra space	should read -Xmx768m
-Xmx=1024m	includes an equals	should read -Xmx1024m

Table 2-4 Examples of incorrect settings

Other common errors include

Changing both initial and maximum heap size so that initial is greater than maximum heap size: -Xms1024m -Xmx512m
WRONG!

Not including both parameters; you must specify both the initial heap size (-Xms) and the maximum heap size (-Xmx).

Heap size is larger than your computers physical memory or larger than the maximum addressable space (1.5 gigabytes on most PCs) e.g. -Xmx1024g WRONG!

Incorrect memory unit (again, use m or M for megabyte, g or G for gigabyte): -Xmx768mb WRONG!

Value is not expressed as a whole number. For example, -Xmx1.5g WRONG!

2.1.8 Sources for Information on Memory Allocation

[JAVAWORLD](#)

[Informix](#)

[Java How To](#)

2.1.9 Mail.dat Client 64 Bit Mode

If desired, the Mail.dat client software can be configured to run in 64 bit mode with the current 32 bit installation packages as follows:

1. Download and install the 64-bit JRE. The version which should be downloaded is the equivalent of the JRE which comes "pre-packaged" in the MDRClient-win32-PROD.zip (or MDRClient-solarissparc-PROD). The version of pre-packaged JRE version can be obtained from the folder name e.g. jre1.6.0_30. Be sure to record the installation location of the JRE, typically 'C:\Program Files\Java' for a windows user, as it will be used in the next set.

2. Edit the run-mdclient.bat shell script (or runBatchUpload.bat) which is used to invoke the Mail.dat client. The line which needs to be modified is instruction which defines the location of the Java installation. This completed by setting the

JAVA_HOME system environment variable to point to the new 64-bit JRE installation location. Replace c:\Program Files\java\ with your installation location from above.

```
SET JAVA_HOME= .\jre1.6.0_30
```

becomes

```
SET JAVA_HOME=c:\Program Files\java\jre1.6.0_30_x64
```

3. In 64 bit architecture, the same data occupies more space in memory due to longer pointers and alignment padding, etc. This increases the memory requirements of any given process, so plan on increasing the memory allocation settings by approximately 50%. For instance, if you normally run the Mail.dat client app on a 32-bit machine with a minimum heap size of 1G and a maximum of 1.5G, you'll want to run it on 64-bit hardware with a minimum heap size of 1.5G and a maximum of 3G. However, follow the guide on Table 3-3 as additional RAM may be needed depending on the size of the Mail.dat job files being processed.

```
REM 512 megabytes (default)
SET MEMALLOC= -Xms64m -Xmx512m
```

becomes

```
REM 512 megabytes (default)
REM SET MEMALLOC= -Xms64m -Xmx512m
```

and

```
REM 1.5 gigabytes
REM use this setting only if you have at least 2.5G of RAM
REM SET MEMALLOC= -Xms512m -Xmx1536m
```

becomes

```
REM 1.5 gigabytes
REM use this setting only if you have at least 2.5G of RAM
SET MEMALLOC= -Xms512m -Xmx1536m
```

4. If running the Mail.dat client on Solaris rather than windows, then also edit the shell script used to invoke the Mail.dat client, adding the -d64 option to the line that actually launches the app. For instance

```
$JAVA_HOME/bin/java -server -Xms2048m -Xmx2048m -XX:NewRatio=2 -XX:NewSize=1024m -
XX:MaxNewSize=1024m
```

```
-classpath $CLASSPATH gov.usps.mdr.client.controller.CmdController uploadMode
```

becomes

```
$JAVA_HOME/bin/java -server -d64 -Xms2048m -Xmx2048m -XX:NewRatio=2 -XX:NewSize=1024m -
XX:MaxNewSize=1024m
```

2.1.10 How to Use a Web Proxy

Many networks have a proxy server that sits between a workstation and the Internet. A proxy server acts as an intermediary for requests from a web client application, such as a web browser or the *PostalOne!* Mail.dat Client Application. A web client connects to the proxy server, requesting information from a server on the Internet. The proxy server evaluates the request according to its filtering rules, and either sends the request to its intended destination or blocks the request. The response from the remote server also passes back through the proxy server to the web client that

originally made the request. A proxy may implement a firewall and unless the web client is configured to work through it, a connection cannot be established with the servers (e.g. *PostalOne!* servers) on the Internet.

Like a web browser, the *PostalOne!* Mail.dat Client uses the HTTP protocol to communicate with *PostalOne!* servers. If your network requires a proxy, you will likely need to configure the Client Application to use the proxy server to upload files into the *PostalOne!* system.

There are two ways of configuring the *PostalOne!* Mail.dat Client Application to use a web proxy.

The first option is to use the *PostalOne!* Mail.dat Client user interface to allow use of a proxy server, using the Settings screens. See the steps below for instructions on use of this option:

1. Launch the MDR Client Application in GUI mode using the run-mdclient.bat or run-mdclient.sh shell script.
2. Click the SETTINGS link in the upper right-hand corner of the logon screen.
3. On the General tab, enter the host name and port number for your web proxy. Click OK.

The screenshot shows a 'Settings' dialog box with a title bar containing a close button. The dialog has three tabs: 'General' (selected), 'Batch Configuration', and 'Receipt Files'. The 'General' tab is divided into three sections: 'Proxy Server', 'Log File', and 'Time Zone'. The 'Proxy Server' section has two input fields: 'Address' with a placeholder '[Enter address here]' and 'Port Number' with a placeholder '[Enter #]'. The 'Log File' section has a 'Log File Location' label, a required field indicator (*), an input field with a placeholder '[Enter file path here]', and a 'Browse...' button. The 'Time Zone' section has a 'Zone' label and a dropdown menu currently set to 'CST'. Each section has a help icon (?) to its right. At the bottom right of the dialog are 'Cancel' and 'OK' buttons. A red asterisk and the word '*Required.' are in the top right corner of the dialog area.

Figure 2-1 Web Proxy Settings

4. Restart the application.

The second way is to edit your mdrsettings.conf file. See the steps below for instructions on use of this option.

1. Ensure the MDR Client Application is not currently running.
2. Using a text editor (not a word processor) such as Notepad, open config/mdrsettings.conf and find the lines that read `http.proxy.port=` and `http.proxy.host=`.

3. Change these lines to include the proxy host name or IP address, and the IP port. The example below shows the relevant lines for a web proxy with a host name of yoyodyne.proxy.server with a port of 8080:
4. http.proxy.port=8080
5. http.proxy.host=yoyodyne.proxy.server
6. Save the file.
7. Restart the application.

2.1.11 Batch Client Automatic Updates

The Mail.dat client application, when run in batch mode (validation/upload and/or receipt polling modes), may be configured to automatically update itself after it has passed its expiration date and when a new version of the application is released. Automatic updates are useful because batch processes typically are run using a scheduling utility, with little or no human supervision, and overnight runs are not uncommon. The Mail.dat client can be configured to allow automatic updates using a configuration entry in mdrsettings.conf file. By default, automatic update is turned off.

1. To turn automatic update on, add the following line to the mdrsettings.conf file:automatic.updates=Y
2. To turn automatic update off, delete the mdrsettings.conf entry, automatic.updates=Y or change it to:
automatic.updates=N.

The key points to be noted for automatic update functionality are:

- The automatic upgrade functionality is restricted to batch processing. Running the client in manual mode will never trigger an automatic upgrade.
- The ability to upgrade automatically is controlled by two factors:
 - The release version being upgraded to must be marked to support automatic updates, which is controlled by the *PostalOne!* system.
 - The client itself must be configured to allow automatic updates, which is controlled by the user. This feature is turned off by default.
- The update process is simple and straightforward – certain types of files in the distribution are replaced with newer ones.
- The automatic update process is non-reversible. Once the new files are copied over the old ones, the old files are gone forever. You cannot get the old version back.
- This process does not support user-modified shell scripts.
- The runBatchUpload and runReceiptPoller scripts will trigger the automatic upgrade process if the version is outdated, but the runBatchVersionCheck script will not.
- The entire update process is largely invisible to the user, aside from a few minutes spent downloading the new client and copying the files. All status messages pertaining to the update process are written to the client.log and debug.log files.
- The update process itself uses very little memory.
- The update process requires that the user have write access to the entire installation directory. It will fail if the user does not have these privileges, or if any files are locked or read-only.

2.1.12 Supporting Multiple *PostalOne!* Environments

Many mailers may need to work with both *PostalOne!* TEM and production environments. Separate installations of the *PostalOne!* Mail.dat Client will be needed for each *PostalOne!* environment. It is important to keep them in separate folders during installation procedures and when installing updates. The title bar at the top of the program will indicate the *PostalOne!* environment and version being supported by that installation of the program.

2.1.13 Installation (Windows and Solaris UNIX)

The *PostalOne!* Mail.dat Client is completely contained in a zip file that can be unzipped into a program folder on a workstation hard drive. A new user must login to the Business Customer Gateway and access the Electronic Data

Exchange page before they use Mail.dat client to upload files. (See the step referencing the Electronic Data Exchange page below.)

Note: No space should exist in the directory path.

1. Create an install directory where the batch processor will be located. Example: C:\postal1
2. Depending on which environment you want to work with, log onto either the production or TEM *PostalOne!* system.
3. On the left menu bar, click on Electronic Data Exchange (*PostalOne!*) in the Mail and Transport section
4. Select Electronic Data Exchange on the left side of the screen.
5. Download links appear for the Windows and Solaris versions of the Client Application under the Mail.dat heading.
6. Click on the link to download the desired version. Be sure to save and extract the selected version into the correct folder for each environment.
7. Extract the files from the archive using PKzip, WinZip, Windows or any Zip file extraction program. If an option to preserve the directory structure of the ZIP file is shown, please select it.
8. The contents of the install directory should now contain the following sub-folders:
 - a. Installation folder: contains batch files for executing the program
 - b. Program folder: will contain batch files (Windows) or shell scripts (UNIX) to execute the *PostalOne!* Mail.dat Client and supplied utilities and the following subfolders:
 - i. Subfolder: jre 1.6.0 - Java Runtime Environment (Windows only – Unix users must supply their own Java Runtime Environment. To link to the JRE, run setup_jre_link.sh shell file.)
 - ii. Subfolder: lib - *PostalOne!* Mail.dat Client program files
 - iii. Subfolder: Config – includes mdrsettings.conf file which contains most settings.
9. Create a repository directory where the Mail.dat files are to be collected. Example: C:\postal1\data
10. Create a directory where the batch processor can place successful Mail.dat transmissions. Example: C:\postal1\successful
11. Create a directory where the batch processor can place unsuccessful Mail.dat transmissions. Example: C:\postal1\unsuccessful
12. Create a directory where the batch processor can place status receipt files. Example: C:\postal1\receiptfile
13. Once the installation file is unzipped, invoke the program by calling the run-mdclient.bat (Windows) or the run-mdclient.sh shell file (UNIX).
 - a. It is recommended that Windows users create a desktop shortcut to that file to make access easy for the user.
14. Windows users can start the *PostalOne!* Mail.dat Client to do program setup.
15. UNIX users manually configure the mdrsettings.conf file with the appropriate values as described in the UNIX setup section below.

2.2 Program Setup For Windows

Enter your *PostalOne!* login and password in the Existing Users section of the Sign In screen:

1. Click the Sign In button to be taken to the main screen of the *PostalOne!* Mail.dat Client, see Figure 2-2 *PostalOne!* Mail.dat Client Sign In Screen.

Note: The characters & and / allowed in the Business Customer Gateway username and password are not currently supported for the Mail.dat Client username and password.

Figure 2-3 PostalOne! Mail.dat Client Main Screen

When you start using the program to validate and upload Mail.dat files, you will see a list of all those files on the *PostalOne!* Mail.dat Client Main Screen, refer to Figure 2-3 *PostalOne!* Mail.dat Client Main Screen.

The first thing you must do is to select the settings by selecting Preferences at the top of the screen.

2.2.1 General Settings Tab

1. If you are using a proxy server, enter the address and port number that is being used.
2. Next specify a folder for your log file that will list all the Mail.dat files validated and uploaded and display their statuses. If you are planning to install the *PostalOne!* Mail.dat Client on multiple computers, this should be a local folder or a folder on your network that only this workstation will access. You should not use a shared folder for the log file. You can click the Browse Button to select a folder.
3. Select your time zone in the list.
4. If you do not wish to setup Batch Mode operation or Receipt File options, click the OK button to save your settings.

2.2.2 Program Updates

From time to time updates to the *PostalOne!* Mail.dat Client may be available. The version of the Mail.dat Client that is used for each *PostalOne!* environment may be different. Users can download new versions and re-install according to the above instructions but no additional setup will usually be needed.

2.3 Transferring Files Manually

The *PostalOne!* Mail.dat Client can be used to validate and upload Mail.dat files using its user interface to transfer files individually. The individual file transfer described in this section includes the steps for validating files, correcting validation errors if any occur, and transferring the file to the *PostalOne!* system.

2.3.1 Validating Files

The File Validator checks your Mail.dat files to ensure that all required fields are populated and contain the correct character format. This section explains how to use the File Validator feature.

Before using the File Validator, verify that the Physical Memory (RAM) available meets the recommendations listed in Section 2.1.5, How Much Memory to Allocate.

To validate your Mail.dat files

1. Open the *PostalOne!* Mail.dat Client and sign in.
2. Click Job Validation / Upload.
3. Click Add Jobs.
4. Select the Mail.dat jobs to validate from your file system.
5. Leave the Just Validate Jobs option selected and click Validate.
6. To change the location of the Validation Log File, click Settings.

2.3.2 Validation Log Errors

If your job fails the validation process, an error message appears.

To determine why the validation failed, write down the error message, and then inspect the log file written by File Validator.

If you have not changed the name and location of the Validation Log file, its default is C:\Validation.log.

1. Use a text editor or other tool to view the log file.

Note: The Validation Log file is a simple (flat) ASCII file. To view it, use a text editor, such as Microsoft® WordPad.

2. To use WordPad to view the Validation Log file, follow these steps:
 - a. Click Start and select Run. The Run dialog box opens.
 - b. In the Open box, type WordPad and click OK to open the WordPad window.

- c. From the File menu, select Open to open the Open dialog box.
 - d. Ensure that C: appears in the Look in box. If it does not, select it from the list.
 - e. In the File name box, type validation.log, then click Open. WordPad opens the file and displays error messages from the oldest to most recent.
3. Scroll through the list of error messages and write down the error message you received for your job.
 4. If the File Validation Log entry indicates that your mailing job (Mail.dat file) did not pass validation, you will need to analyze the Mail.dat file.
 - a. If you produced your mailing file using a third-party vendor's software product, you will probably need to contact them for help in resolving the problem.
 - b. If you produced the mailing file using in-house software, you will probably need to analyze the file or contact technical resources to help you resolve the problem.

Some customers use a third-party Mail.dat viewer to analyze their Mail.dat files to resolve problems.

Other customers analyze the Mail.dat file using a text editor capable of counting lines and character positions.

For a complete listing of error messages that appear in the Validation.log file, see Section 11 Error Messages.

2.3.3 Performing the File Transfer Manually

Before transferring your jobs to the Postal Service, you should first validate your files. For more information, see Section 2.3.1, Validating Files.

To transfer job files manually:

1. On the left menu bar, click **File Transfer**. A Security Warning message may open. If you do not see it, minimize or move the browser window, it may be hiding the message. Click Yes. If you do not click Yes, you cannot transfer files to the *PostalOne!* system. The File Transfer page displays the All Folders and File Contents of panes.
2. The All Folders pane on the left displays your computer's local hard drives (usually A, C and D). Click the plus sign (+) next to the drive on which your jobs are saved.
3. In the All Folders pane, scroll up or down to locate the folder in which your job is saved.
4. Select the proper folder by clicking the folder name. The File Contents pane on the right displays the job header files.

Note: If the folder containing your job is in a subfolder, click the plus sign (+) next to the main folder to display the subfolders. From the subfolders, locate and select the appropriate folder.
5. In the File Contents pane, select the header file of the job you want to transfer.

Note: All files associated with a mailing job are transferred as a result of selecting the header file. To transfer multiple jobs simultaneously, hold down the CTRL key and click the header files of the jobs one at a time to select them.
6. Once you have selected the job header files, determine the location and name of the log file, just as when using the File Validator. To do this, click Validation Log File. By default, the File Validator writes the results to C:\Validation.log.
7. Click Transfer files to begin the transfer. While the file is transferring, you see a status bar beneath the File Contents pane indicating transfer progress.
8. After your job has transferred, a message indicating the transfer status appears. Click OK to close the message and continue working. If you are transferring multiple jobs, the transfer message appears after each job is transferred. When each message appears, click OK to continue working.

Note: If you do not click OK to close the message, the remaining jobs will continue to transfer in the background.
9. To check the status of your transferred jobs, click Transfer Summary.

Check File Transfer and Upload Status

To check transferred job and file upload status for files:

1. Click Home.
2. Search by entering one or more of the following:
 - a. Date Range
 - b. Job ID
 - c. Mailing Facility IDs
3. Click Submit. Each mailing job submission is listed with the following information:
 - a. Job ID
 - b. File ID
 - c. Mailing Facility ID
 - d. Submission Date
 - e. # of Files
 - f. File Status
 - g. Submission Type
 - h. Submission Status
 - i. Postage Statement Generation Indicator
 - j. Qual Report Generation Indicator
4. To analyze each job submission in detail, click that job submission. The Job Validation / Upload Details screen will show the following information for the job submission:
 - a. Error Location
 - b. Submission Time
 - c. File Size
 - d. Message Type
 - e. Record ID
 - f. Field Name
 - g. Field Position
 - h. Message Description

2.3.4 Additional Logging

In addition to the Validation Log, by default the Mail.dat Client will create two other log files, the Client Log file (default location: C:\client.log) and the Debug Log (default location: C:\debug.log).

The Client Log file will contain informational messages, warnings and errors that occur while the Mail.dat Client is running.

The Debug Log file contains the same information as the Client log file, as well as debugging level information. If users are interested in monitoring logging of the Mail.dat Client, they can monitor the Client Log file for events. The Debug Log is used by the *PostalOne!* Help Desk while investigating issues.

Users may also find it useful to monitor the Standard Out and Standard Error streams when the Client is running. All Debug level and above events are outputs to Standard Out.

The Mail.dat Client uses the log4j logging system to generate log events. These settings can be customized by modifying the log4j.properties files in the config folder. The log4j system is an industry standard Java logging library. More information can be found here: [Apache log4j™](#)

2.4 Batch Processing

2.4.1 Batch Mode

The *PostalOne!* Mail.dat Client can be used to validate and upload Mail.dat files using an unattended batch mode. Batch mode also makes it possible to receive Status Receipt files. The Status Receipt files provide information about which stage of the *PostalOne!* process each Mail.dat file is in.

PostalOne! Mail.dat Client allows two methods of batch load:

One-time validation and upload of all Mail.dat files in a specified folder.

The RunBatchUpload batch file or script file will do this when run by another program such a Commercial Mail.dat manipulation program or a scheduler. Command line options even allow specific Mail.dat files to be specified for validation and upload.

Automated Batch Processing

Automatically validates and uploads any Mail.dat files placed in the jobs repository folder at user-specified intervals.

The Run Time and Sleep time settings must be set to do automated batch processing.

There can only be one instance of the *PostalOne!* Mail.dat Client Application doing automated validation and upload at any one time.

If large Mail.dat files are being transferred to the Jobs Repository Folder for processing, it is advised to zip them before transferring them or transfer the HDR files last. This ensures that it is not possible for the program to start validation of an incomplete set of Mail.dat files.

In all cases, Mail.dat files will be moved from an input folder to one of three output folders, one for files that successfully validate, another for files that fail validation and another that are rejected prior to validation. Files are placed in the rejected folder if there are files that are not listed in the HDR file, files that are not recognized as standard Mail.dat files (HDR, SEG, SEG, etc.) or files that are identified as a non-supported Mail.dat spec.

The *PostalOne!* Mail.dat Client can also check for and download new receipt files, either while uploading and validating Mail.dat files or in as separate process (RunReceiptPoller batch or script file)

Mail.dat files processed in batch mode can only be validated and uploaded. There is no Validate Only option like there is with the manual user interface.

Upon successful validation, the batch processor immediately uploads the Mail.dat file. If there is more than one Mail.dat file to validate and upload, the next file will begin validation while the first is being uploaded.

If a Mail.dat file fails validation, the user interface can be used to view validation error logs, just as if the validation was done using the user interface.

Batch processing will queue original and update jobs if both are in the batch repository folder. The original job (with the higher Header History Sequence Number) will be processed first, and subsequent processing will pick up the update jobs.

2.4.2 Receipt Polling

When files are uploaded in batch mode, the *PostalOne!* System can return Status Receipt files that can be extremely useful to the mailer. For Mail.dat 09-1 and later releases, receipt polling does not take place automatically after Mail.dat files are uploaded. Users can use a command line option to download receipts after upload. It is better to use a separate instance of the *PostalOne!* Mail.dat Client Application in batch mode to do automated, continuous polling so that receipt data can be available close to real-time without interference from validation and upload activities. These receipt files will indicate the status of the Mail.dat file that was uploaded based on the following events:

- Validation— at either the server or using the *PostalOne!* Mail.dat Client
- Job Acceptance
- Insert
- Postage Statements Generation
- Postage Statements Cancellation

- Postage Statements Finalization /Acceptance
- Postage Statements Reversal

Additional events with the Enhanced XML format:

- Reject – for a fatal error prior to functional validation
- Qualification Report Generation

These statuses can be very useful to inform the mailer of what is happening to their submitted Mail.dat files. The automated return of this data combined with its automated use by mailer applications can provide important alerts to different parties that have an interest in the outcome of a Mail.dat submission.

Section 4.5 Sending Job Updates describes how various job statuses and container statuses affect subsequent processing given the current job or container status available in the receipts.

Server validations will be reflected in the receipt file with a failed Validation event, passed Insert event, and the appropriate error code and message. Fatal errors will also include more accurate text in receipt files.

2.4.3 Status Receipt File Naming

Status Receipt files are available in XML, flat file formats or Enhanced XML. The current naming convention is root file name with a 3 digit file extension that increments with each receipt, specified in the MDRSETTINGS.CONF file. When the extension reaches 999, it will restart at 001. These files are placed in a receipt folder also specified in the MDRSETTINGS.CONF file.

Warning: Mailers using this naming method should clean out the receipt files out of their receipt download folder frequently. Receipts will stop downloading if a file with the same name already exists in that download folder. Mailers can match the receipt to the Mail.dat file based on the Job ID in the file.

This version of the *PostalOne!* Mail.dat Client offers a new file naming option. This new naming convention will be triggered automatically if the Receipt File Name in MDRSETTINGS.CONF is blank. The file name is status_receipt_job-id_HDR-historical-sequence-no_creation-date/timestamp. The extension is either .xml or .txt depending on the format. This format allows the mailer to match up the receipt not only to the Job ID but also to the Header Historical Sequence Number which must be unique for each submission for that Job ID. If the mailer sent an original file and three updates, the result is four different Header Historical Sequence numbers submitted. Learn more about these naming options and token values in Section 2.4.5, Receipt Polling Configuration.

2.4.4 Setting Up the *PostalOne!* Windows Mail.dat Client to Work in Batch Mode

No matter which batch mode you use, the login, password and folder structure that will be used must be configured in the *PostalOne!* Mail.dat Client. To do this:

1. Start the *PostalOne!* Mail.dat Client.
2. Click on the Settings option on the menu bar.
3. In the General tab do the following:
4. If you must work through a proxy server, enter the proxy server address and port number.
5. Select a folder to place your log file in. This log file is a list of all Mail.dat files that have been processed for validation and/or upload.
6. Select your time zone from the pull down.
7. Click on the Batch Configuration tab.
8. Enter the *PostalOne!* user name and password that will be used to transfer validated files. This information allows the *PostalOne!* Mail.dat Client to upload files in batch mode without the SSL Security Certificate that had previously been required on the original Batch Upload program.

Settings

Failed Jobs * D:/Maildat/Failed Browse... ?

Successful Jobs * D:/Maildat/Successful Browse... ?

Cancel OK

Figure 2-4 PostalOne! Mail.dat Client Batch Settings Screen

This information will be populated in the MDRSETTINGS.CONF file that is in the CONFIG sub-folder under the program folder where the *PostalOne! Mail.dat Client* is installed. The password and login information will be encrypted.

To edit this encrypted information outside of the *PostalOne! Mail.dat Client Setup* Screen invoke the RUN-CLIENT_CREDENTIALS.BAT batch file in the *PostalOne! Mail.dat Client* program folder. This program will prompt you for a new login name and password then encrypt it in the MDRSETTINGS.CONF file.

UPLOAD Settings:

To do automated batch processing, populate the required upload settings. The Run Time specifies the number of minutes the program will run. 1410 minutes represents 23.5 hours. After that time the program will automatically terminate. In this case, execute the scheduler every 24 hours to process Mail.dat files all but 30 minutes per day leaving time for system maintenance or backup. The Sleep Time indicates the interval that the program will be checking for new Mail.dat files. It should not be set to less than every 5 minutes.

Batch File Locations:

1. Select the Job Repository folder which will hold the Mail.dat files you wish to validate and/or upload. When doing automated batch processing, this folder will act as a hot folder.
2. Select the folders where these files will be moved based on the outcome of the validation
 - a. Choose a folder for files that fail validation
 - b. Choose another folder for files that validate successfully
 - c. Choose a folder for files that cannot be validated at all (rejected files)

2.4.5 Receipt Polling Configuration

2.4.5.1 Configuration and Setup

It is recommended that mailers using Status Receipt files schedule a separate instance of the *PostalOne!* Mail.dat Client to poll receipts. Automated polling can be implemented by populating the Receipt Run Time and Sleep Time settings.

- Windows users set a sleep time of 30 minutes (will retrieve receipt data every 30 minutes).
- In the Receipt Files tab, populate the following fields:
- Receipt Event Generation – choose Enable or Disable to turn on or off receipt file generation
- Receipts Repository – select the folder to which you want to save your receipt files.
- Receipt Format – choose Enhanced XML, XML, or ASCII
- Delimiter - If you selected the ASCII format, select the character to use for a delimiter. You can also enter your own delimiter if you select other
- Postage Statement Filter – if you selected the Enhanced XML format, choose Submission Level or Billable Statements Only.
- Submission Level: one receipt record will be generated for all related events for that Job ID and Historical Header ID level.
- Billable Statements Only: only receipt records for postage statements with a USPS Processing Due, Finalized, Reversed, or Cancelled status will be provided
- Receipt File Name - You can leave blank for the default format or populate it with a naming convention you wish to use that includes tokens to represent different data elements. Tokens can be used to define a unique file name. These tokens are surrounded by brackets {}. The following substitution tokens are recognized in the receipt filename:
 - {0} The current date (YYYY_MM_DD)
 - {1} The current time (HH_MM_SS_SSS)
 - {4} The receipt file sequence (001-999)
 - {5} The file extension: xml or txt depending on the receipt type.

Example: *StatusReceipt_{0}_{1}.{5}* generates a file such as *StatusReceipt_2009_06_12_12_28_10_581.txt*
- The default name format if you leave the file name blank is status_receipt_{2}_{3}_{0}_{1}.{5}
- The receipt file name sequence increments from 001 to 999, and wraps to 001 after reaching 999. If this token is used without the date token, the receipt directory should be periodically emptied out. Note that if the directory already contains a receipt file with the requested name, it is not overwritten unless the overwrite Files flag was set on application startup. If this value is not set, the system will generate a receipt file name using the default format: status_receipt_{0}_{1}.{5}
- Receipt Poll Run Time – If automated receipt downloading is desired, this is the number of minutes the Receipt Poller will run before terminating. If scheduling the program to run once per day this should represent less than 24 hours. Using 1410 lets the program run 23 hours and 30 minutes before shutting down.
- Receipt Poll Sleep Time - this is how often the program will check for new receipts. You should not check too often since this may overload the *PostalOne!* server. Do not use a value of less than 5 minutes.
- Click OK to save your settings

Settings *Required.

Figure 2-5 Receipt File Settings

Additional Usernames for Receipt Download

When the batch application starts, it uses the batch username/password credentials to log into the *PostalOne!* system. These entries are also used by the receipt processor to log into the *PostalOne!* system and to determine which users receipts to download. Only receipts produced by jobs that were uploaded by this user will be downloaded. To use a single receipt processor instance to download receipts produced by jobs uploaded by more than one user, you may add up to ten additional username and password pairs in this section. You do not need to re-enter the username and password entered on the Batch Configuration tab as receipts produced by jobs uploaded by this user are always downloaded.

Important Considerations:

- This version of the *PostalOne!* Mail.dat Client creates Status Receipts but does not create Postage Statement Receipt files.
- Run only one instance of a receipt polling process.

2.4.5.2 Invoking Batch Processing or Receipt Polling Using A Scheduler

Invoke the *PostalOne!* Mail.dat Client Application in Batch Mode at specific times of the day to validate all files in the Jobs Repository. To do this:

1. Have the scheduler execute the runBatchUpload batch or script file without any of the Upload Run Time or Sleep Time values populated in your settings. Some versions of this file may have a pause statement at the end, which should be removed.

2. In Windows, use Start/Control Panel/Scheduled Tasks.
3. Select Add a Task and browse to the folder you installed the *PostalOne!* Mail.dat Client.
4. Select the RunBatchUpload.bat file and click Open.
5. Select the frequency. If you want to validate and upload your entire file starting at 11 pm, select Daily, click Next.
6. Enter the time; specify whether you want this to run every day or weekdays.
7. Enter start date.

It is possible to set up multiple scheduled tasks to execute the upload throughout the day. No additional MDRSETTINGS.CONF configuration options are needed. Take care not to schedule batch processes for validation or uploading too close together. Run only one validate and upload process or receipt polling process at the same time.

When running the batch process from a scheduler to validate and upload files, the program captures a list of files in the repository. It will process them in file name order. When processing is complete, the program will terminate. Schedule the validation and upload processes so that only one is running at any one time.

Special Considerations

To transfer and write large files to the Jobs Repository, either zip these files first and transfer the zip files or write the HDR Mail.dat files last. If all of the individual Mail.dat files that belong to a job being validated are open by another process for writing or transfer, validation will fail.

AUTOMATED VALIDATION & UPLOAD

For automated validation and upload, setup the schedule to run the program once per day and set the Upload Run Time to a value of less than 1440. 1410 allows the program to run for 23.5 hours. You also have to populate the Upload Sleep time.

AUTOMATED RECEIPT POLLING

For automated receipt polling, schedule the RunReceiptPoller script or batch file once every day and populate the Receipt Poll Run Time to a value less than 1440 as well. Also populate the Receipt Poll Sleep Time.

2.4.5.3 Invoking Batch from Another Program

Many mailers use either a commercial Mail.dat product or a program they wrote themselves to manage the submission of Mail.dat files. These programs will create Mail.dat files according to *PostalOne!* naming conventions and place them in the Jobs Repository folder. These programs can launch the Mail.dat Client Application just like a scheduler but they can also specify the specific Mail.dat files they want to validate and upload in the command line. This way the program can continue to generate more Mail.dat files for upload but ensure they are not processed until the Mail.dat application instructs the Mail.dat Client to do so.

To add a file list, the Mail.dat application can edit the runBatchUpload.bat batch file, and then invokes the Mail.dat Client. The runBatchUpload.bat contents are shown below.

```
SET JAVA_HOME=.\jre1.6.0
SET PATH=%JAVA_HOME%\bin;%JAVA_HOME%\lib;%JAVA_HOME%\lib\i386;.lib\windows\x86;%PATH%
FOR %%i in (lib\*.*) DO CALL lcp.bat %%i
SET CP=.;./lib/windows;%CP%;
SET CLASSPATH=./config;%CP%
%JAVA_HOME%\bin\javaw.exe -client -classpath %CLASSPATH% gov.usps.mdr.client.controller.CmdController
uploadMode
```

This is the batch file that needs the last line modified at the end of the line to include the HDR or ZIP file names of all Mail.dat files to be validated.

For example, if the Mail.dat Application created four Mail.dat files, the Header names of each of the four files are listed after uploadMode separated by spaces.

Example: *uploadMode ABCD0001HDR ABCD0002HDR ABCD003.ZIP*

This validates and uploads the three Mail.dat files identified by their HDR or ZIP file names. The files are validated in order and upload is started after each validation is completed. If one of the files was large and the other two were small, consider putting the small ones first so they validate and upload quickly without having to wait for the large file to validate first.

If the computer had enough available memory, the Mail.dat program could call separate instances of the Mail.dat Client for each file or one for large files and another for small files. For optimum performance, each instance of the program should have up to 2 GB of system memory (RAM) available. If the computer does not have more than 3 GB of RAM, use a single upload instance. When another program calls the Mail.dat Client and passes one or more file names, no other configuration settings are needed in the MDRSETTINGS.CONF file.

Special Considerations

The length of the entire batch file line in Windows cannot exceed 255 characters. This leaves only 141 characters for the file names. This accommodates ten 8.3 file names separated by spaces. Other operating systems may have larger limits or no limits at all.

2.4.5.4 Stopping the Program

When running the *PostalOne!* Mail.dat Client to automatically do upload and validation or to poll receipts and then to shut it down before the run time is over, do not just end the task or kill the process. This could result in data corruption. The best way to stop the Mail.dat Client when operating in batch mode is to go to the window that executing the program will have opened and typing *CTL-C* on the keyboard. If this fails to work, Windows users can go the Windows Task Manager (*CTL-ALT-DEL*), click on the Processes tab, highlight *Javaw.exe* and click the *End Task* button.

2.4.5.5 Setting Up Batch Mode for Solaris UNIX

Review the installation instructions above for Windows for a description of operation modes and MDRSettings.conf parameters and use Table 2-6 Batch Processing Files to determine the equivalent parameters to populate. The user name and password will have to be populated by running the *run-client_credentials.sh shell* file. In scheduled mode, use the UNIX scheduler to invoke the program or as an alternative download the Windows version of the *PostalOne!* Mail.dat Client Application. Configure it as desired and then transfer the MDRsettings.conf file to the appropriate folder on the Solaris machine.

2.4.6 References

2.4.6.1 Command Line Options

Command line option	Description
Java Options	Should appear after Java executable in command line
-Xmsnm Example: -Xms512m	Initial size of Javas memory allocation pool. This value must greater than 1MB (1024KB). Append the letter k for kilobytes (multiples of 1024) or m for megabytes: The default value if not specified is 2MB. Example shows 512 MB. See requirements section for recommended values.
-Xmxnm Example – Xmx512m	Maximum of Java memory allocation pool This value must a multiple of 1024 kb or greater than 2MB. Append the letter k or K to indicate kilobytes, or m or M to indicate megabytes. The default value is 64MB. Example shows 512 MB. See requirements section for recommended values.
Batch Operation Operations	These arguments appear after gov.usps.mdr.client.controller. CmdController in a command line.
receiptPollMode	Activates receipt polling mode
uploadMode	Activates batch validation and upload mode
uploadMode receiptPollMode	Activates batch upload and receipt polling mode

Command line option	Description
Mail.dat hdr or zip file names	Specifies specific Mail.dat jobs files to validate and upload. Should be in command line after the above command line options. If files are not specified when starting in uploadMode, the program will attempt to upload the entire batch of files found in the upload directory at the time the system starts up. There may be operating system limitations on the length of the command line arguments that can be used, so be aware of this when specifying multiple files.
versionCheckMode	It will check its version against the server to see whether or not it is supported. This option preempts all other behavior - once the check is complete, the application quits.
showVersion	This causes the application to write its version to the console. This option may be used in conjunction with other modes. Note that the version is always written to the log file, no matter the value of showVersion.
overwriteFiles	A file that exists in the success or failed directory will not automatically be overwritten (the file will remain in the repository after processing). To enable overwrite mode, use the overwriteFiles flag.
DMail.dat.settings.file.path= c:\path\filename.extension	When specified in the command line as the first argument, this will allow the mailer to define the location and name of the configuration file. Unlike paths in MDRSettings, the servers, drives and paths are defined using the operating system standards. The full file name and extension should also be defined. If not present, the settings will be maintained in MDRSettings.conf located in the CONF subfolder under the program folder.

Table 2-5 Command Line Options

The following is an example of several of these command line options used at the same time in a modified runBatchUpload batch or shell file (file should be renamed if modified to avoid being overwritten by an update):

```
start %JAVA_HOME%\bin\javaw.exe -DMail.dat.settings.file.path= c:\work\mail\settings.cfg -Xms512m -Xmx512m -client
-classpath %CLASSPATH% gov.usps.mdr.client.controller.CmdController uploadMode overwriteFiles
```

In this example Java will allocate 512MB of memory up-front, get its settings from a file called settings.cfg in c:\work\mail, upload and validate files in batch mode and overwrite any Mail.dat files in the failed or successful output folders.

2.4.6.2 Batch Files (Windows) and Shell Scripts (UNIX)

Batch File/Shell Name	Description
Run-mdclient.bat	Sets the paths to the local installation of Java and executes the PostalOne! Mail.dat Client to display the user interface. Windows Only.
RunBatchUpload	Executes batch verification and upload for all files in the repository folder. Add file names to process selected files.
Run-receiptpoller	Checks PostalOne! server for receipt files and terminates. See instructions for how to enable automated operation.
Run-Client_credentials	Prompts for login name and password and encrypts these in MDRConfig. Required for UNIX users. Windows users can use setup screen of user interface.
RunBatchVersionCheck	Checks to see if version of program is currently supported. If it is not supported, the batch process is terminated and a notice of this is written into the validation log.
setup_jre_link.sh (Unix Only)	Links to Java JRE environment that was installed by the user.

Table 2-6 Batch Processing Files

2.4.6.3 MDRSettings.conf Settings

Setting	Description	Populated by PostalOne! Mail.dat Client User Interface
logfile.path	The location where the log files are going to be stored.	Yes
successful.jobs.path	Mail.dat jobs will be moved to these directories after processing, according to success or failure of processing.	Yes
failed.jobs.path		Yes
rejected.jobs.path		Yes
Dmail.dat.settings.file.path	Optional setting to specify where the MDRSettings.conf user settings file will be written and maintained. Must be manually added to MDRSettings.conf.	No
Uid	User ID for login - encrypted – must be populated by Mail.dat Client User Interface Setup Screen or by using Run-client_credentials_tool utility.	Yes
PW	Password for Login – encrypted must be populated by Mail.dat Client User Interface Setup Screen or by using Run-client_credentials_tool utility	Yes
http.proxy.host	The host name of the http proxy server controlling access to the Internet. Leave blank if no proxy server is required.	Yes
http.proxy.port	The port that should be used for http traffic processing the internet via an http proxy server. Leave blank if no proxy server is required.	Yes
http.connect.retries	The number of times to retry http connections if the initial attempt fails due to timeout.	Yes
repository.location	This specifies the directory that contains the Mail.dat job files to be uploaded. Use a forward slash for the file path separator.	Yes
application.reporting.timezone	The time zone used for receipt file processing. Acceptable values include: EST, CST, MST, PST, GMT-14, GMT-13, GMT-12, GMT-11, GMT-10, GMT-9, GMT-8, GMT-7, GMT-6, GMT-5, GMT-4, GMT-3, GMT-2, GMT-1, GMT, GMT+1, GMT+2, GMT+3, GMT+4, GMT+5, GMT+6, GMT+7, GMT+8, GMT+9, GMT+10, GMT+11, GMT+12, and GST.	Yes
automatic.updates	Setting for batch automatic updates. A value of Y will trigger automatic updates to batch client wherever appropriate. The default setting is N.	No
STATUS RECEIPT FILES		
status.receipt.file.repository.location	The directory that the Status Receipts will be written to.	Yes
status.receipt.enabled	Enabled turns on status receipts Disabled turns off status receipts	Yes
status.receipt.type	The file type of the Status Receipt: A creates ASCII delimited receipt files X creates XML receipt files E creates Enhanced XML receipt files * Enhanced XML Available in Release 24.0	Yes
status.receipt.field.delimiter	If A (ASCII) was set as receipt file type, set the optional character delimiter to be used. If not set, the system will default to comma , delimited.	Yes

Setting	Description	Populated by PostalOne! Mail.dat Client User Interface
*status.receipt.filter	The level of detail on the Status Receipt: *Submission indicates one receipt record will be generated for all related events for that Job ID/Historical Header ID *Billable indicates receipt records will only be generated for postage statements with a USPS Processing Due (UPD), Finalized (FIN), Reversed (REV), or Cancelled (CAN) status *Available in Release 24.0	Yes
status.receipt.filename	The Status Receipt file name. This is for legacy backwards compatibility naming convention support. The following substitution tokens are recognized in the receipt filename: {0} The current date. {1} The current time. {4} The receipt file sequence. {5} The file extension: xml or txt depending on the receipt type. The Receipt File sequence increments from 001 to 999, and wraps to 001 after reaching 999. If this token is used without the job or date tokens, the receipt directory should be periodically emptied out. Note: that if the directory already contains a receipt file with the requested name, it will not be overwritten unless the <i>overwriteFiles</i> flag was set on application startup. If status.receipt.filename is not set, the system will generate a receipt file name using the default format: status_receipt_{2}_{3}_{0}_{1}.{5}	Yes
status.receipt.poll.run.time.minutes	Time in minutes the receipt poller should run for.	Yes
status.receipt.poll.sleep.time.minutes	Time in minutes receipt poller should sleep between pollings. The system will not allow a time less than 5 minutes to prevent overloading the server with pollings	Yes
count.additional.username	Indicates the number of additional usernames When the batch application starts, it uses the batch username/password credentials to log into the <i>PostalOne!</i> system. These entries are also used by the receipt processor to log into the <i>PostalOne!</i> system and to determine which users receipts to download. Only receipts produced by jobs that were uploaded by this user will be downloaded. If you want to use a single receipt processor instance to download receipts produced by jobs uploaded by more than one user, you may add up to ten additional username and password pairs in this section. You do not need to re-enter the username and password entered on the Batch Configuration tab as receipts produced by jobs uploaded by this user are always downloaded.	Yes
additional.username.X	Additional User Id for downloading receipts - encrypted – must be populated by Mail.dat Client User Interface Setup Screen. X should be incremented to indicate which additional username it is.	Yes
additional.password.X	Additional Password for downloading receipts - encrypted – must be populated by Mail.dat Client User Interface Setup Screen. X should be incremented to indicate which additional password it is (corresponds to the additional username x).	Yes

Setting	Description	Populated by PostalOne! Mail.dat Client User Interface
VALIDATION AND UPLOAD SETTINGS FOR AUTOMATED BATCH PROCESSING		
upload.run.time.minutes	Time in minutes the batch upload should run for. This is optional, and is only used if setting up a hot batch folder (Automated Mode).	No
upload.sleep.time.minutes	Time in minutes the batch upload should sleep between batch runs. This is optional, and is only used if setting up a hot batch folder (Automated Mode).	No

Table 2-7 Batch Processor Settings

3. Mail.dat File Definitions

This section contains the names and definitions of the seventeen files used in Mail.dat by the *PostalOne!* system.

File	Definition
Header (HDR) <i>File name.hdr</i>	The Header file is an introduction to the entire Mail.dat. It identifies who created the file, what version of the IDEAlliance standard was used (ensuring compatibility with other users), and when the file was created. Most importantly, it identifies the total file record count for each file type. If the quantity fields in the Header record say there are a differing number of records than received, it is the first indication that the file is incomplete and, therefore, invalid. The presort software used; history of who has touched this Mail.dat, and other information is also in the Header.
Segment (SEG) <i>File name.seg</i>	The Segment file is used to identify all of those addresses within presort that are considered as a group. It separates parts of a mailing that require different processing. The specification notes: In general, the fewer the segments in a Mail.dat job, the better. It is only appropriate to create a segment file when it is needed to separate part of a mailing for different processing. Segmenting should not be used to differentiate among entry points unless they will need to be processed in some fundamentally different fashion. Similarly, segment files should not be used to create reporting categories from information that is otherwise available in Mail.dat. The Segment file identifies the class and characteristics of the mail preparation for each segment.
Mailpiece Unit (MPU) <i>File name.mpu</i>	The Mailpiece Unit file contains the physical description of the whole mailpiece in terms of physical attributes, such as dimensions and ad percentages. Often, there is a single MPU within a Segment. Each Mail Piece Unit ID must be defined in each Segment ID. A particular Mail Piece Unit ID may be defined as identical to that same Mail Piece Unit ID in a different segment (SEG ID 0001, MPU ID 00001 = SEG ID 0002, MPU ID 00001). A particular Mail Piece ID may be defined as different from that same Mail Piece Unit ID in a different Segment (SEG ID 0001, MPU ID 00001 <> SEG ID 0002, MPU ID 00001). However, co-mingled mail, selectively inserted letters, and selectively bound catalogs/periodicals can have multiple Mailpiece Units associated with one segment. Another example of where there might be multiple Mailpiece Units in one segment is if multiple editions are produced in separate processes, but staged onto the same pallets on the backend in order to be presented as part of one mailing.
Mailer Postage Account (MPA) <i>File name.mpa</i>	The Mailer Postage Account file describes the mailers permit and account information, including the payment method to be used and any special authorizations.
Component (CPT) <i>File name.cpt</i>	The Component file is used to define those parts of a Mailpiece Unit by the mail class for which they qualify. For example, a magazine is in the mail class of Periodicals. However, the publisher may decide to have a mailpiece that's ineligible for Periodicals rates to be attached to the front of the magazine. The ineligible mailpiece might be a Standard Mail™ piece. Each of these parts would be identified with a separate Component record that is linked to the appropriate MPU.
Component Characteristic Record (CCR) <i>File name.ccr</i>	The component characteristics record is used to define zero to many characteristics of a component record. The characteristics may be content of mail, incentives, or fees.
MPU/Component Relationship (MCR) <i>File name.mcr</i>	The MPU/Component Relationship file is a table relating the two variables. Like the MPU and Segments relationships, often there is a one-to-one relationship with an MPU and a Component. However, as described in the above file definition, there are exceptions. Periodicals with First-Class Mail attachments and Periodicals with Standard Mail enclosures are two examples.
Container Summary (CSM) <i>File name.csm</i>	The Container Summary file identifies each container, its level, its destination, the point of entry and the contents in terms of rates, copies, pieces and weight. Pallets, sacks, and trays are containers. There will be one Container Summary per container.

File	Definition
Container Quantity (CQT) <i>Filename.cqt</i>	The Container Quantity file supplies quantitative details about the content of each container. It summarizes the contents of each container in terms of MPUs, zones, and rate categories. It also supplies copy and piece counts at this level of detail. Unlike the usually limited relationship of MPU/Segment, and Component /MPU, it is expected that there will be a great number of Container Quantity records linked to the same Container Summary.
Package Quantity (PQT) (optional) <i>File name.pqt</i>	The Package Quantity file presents a finer level of detail defining the quantity, rate, weight, and package destination for every package in a container. This file is required for MLOCR mailings, or to generate a USPS Qualification report and/or provide input to the USPS <i>PostalOne!</i> system. For mailings, this file is required for production of the PS Form 3541 postage statement, qualification report, and Outside County container and bundle report.
Walk Sequence (WSR) (optional) <i>File name.wsr</i>	The Walk Sequence file provides detail for carrier route packages in a Walk Sequence mailing: package ZIP Code, carrier route number, walk sequence type, total stops made, and total possible stops.
Piece Detail (PDR) (optional) <i>File name.pdr</i>	The Piece Detail file is used by the individual manifest mailing procedures. For non-manifest mailings, PDR files should be used to identify individual wasted pieces in a mailing, or for full-service mailings that lack sequentially numbered IM barcodes or a single mailing ID for all pieces in the mailing.
Postage Adjustment (PAR) (optional) <i>File name.par</i>	The Postage Adjustment file defines any postage adjustments required to be made, as compared to the anticipated production specifics as supplied within the Mail.dat. An example would be a penalty for too many unreadable barcodes. To specify spoilage and shortage use either a PAR, PDR, or PBC file. If using the PAR file, submit only one PAR file per Mail.dat job.
Original Container Identification (OCI) <i>File name.oci</i>	The OCI file links a new container with an original container and allows customers to tie or link container information between Jobs from Mail.dat and Mail.XML.
Piece Barcode (PBC) (optional) <i>File name.pbc</i>	The Piece Barcode files is used as an alternative to the PDR file.
Special Fees/Charges (SFR) (optional) <i>File name.sfr</i>	The SFR file is used to define zero to many service types of a single mail piece.
Un-coded Parcel Address Record (UPA) <i>File name.upa</i>	The UPA file is used to provide addresses for uncoded parcels.

Table 3-1 Mail.dat Files and Definitions

3.1 File Naming Conventions

The file name consists of eight alphanumeric characters plus a 3-character file-specific extension. The file name component is the User License Code, a four digit alphanumeric code unique to Mail.dat licensed user and the File Set ID a four digit alphanumeric identifier designated by licensed user.

3.2 Files Not Supported

For a file that is not supported, the *PostalOne!* system will allow the file to be included in a file set; however it will not perform any validations, upload or store those records. The *PostalOne!* system does not support the following six IDEAlliance files.

- Postage Statement Record
- Seed Name Record
- Package Label Record
- IJ / Container Relationship Record

- Manifest Individual Record (use the PDR file instead)
- Manifest Summary Record (use the PDR file instead)

4. Sending Properly Configured Mail.dat Files

To successfully conduct business electronically in the *PostalOne!* system, the Mail.dat files sent via the Internet must be in the mailing industry format maintained in the IDEAlliance specification for Mail.dat.

Mail.dat files are processed and stored in the *PostalOne!* system. Postal Service personnel access these files over the Internet to conduct business and to support verification and acceptance procedures. The *PostalOne!* System uses the Mail.dat files to generate postage statements, qualification reports, reconciliation reports, induction reports and other reports for customers who have presented mailings to the Postal Service and displays that generated information back to the customers. Postal Service™ acceptance clerks review the generated qualification reports and postage statements together with the physical mail in the mail verification and acceptance process.

The figure below illustrates the relationship between the system and its users. It shows how business mailers submit mailing data to the *PostalOne!* System and how that data is retrieved by Postal Service Business Mail Entry Units (BMEU).

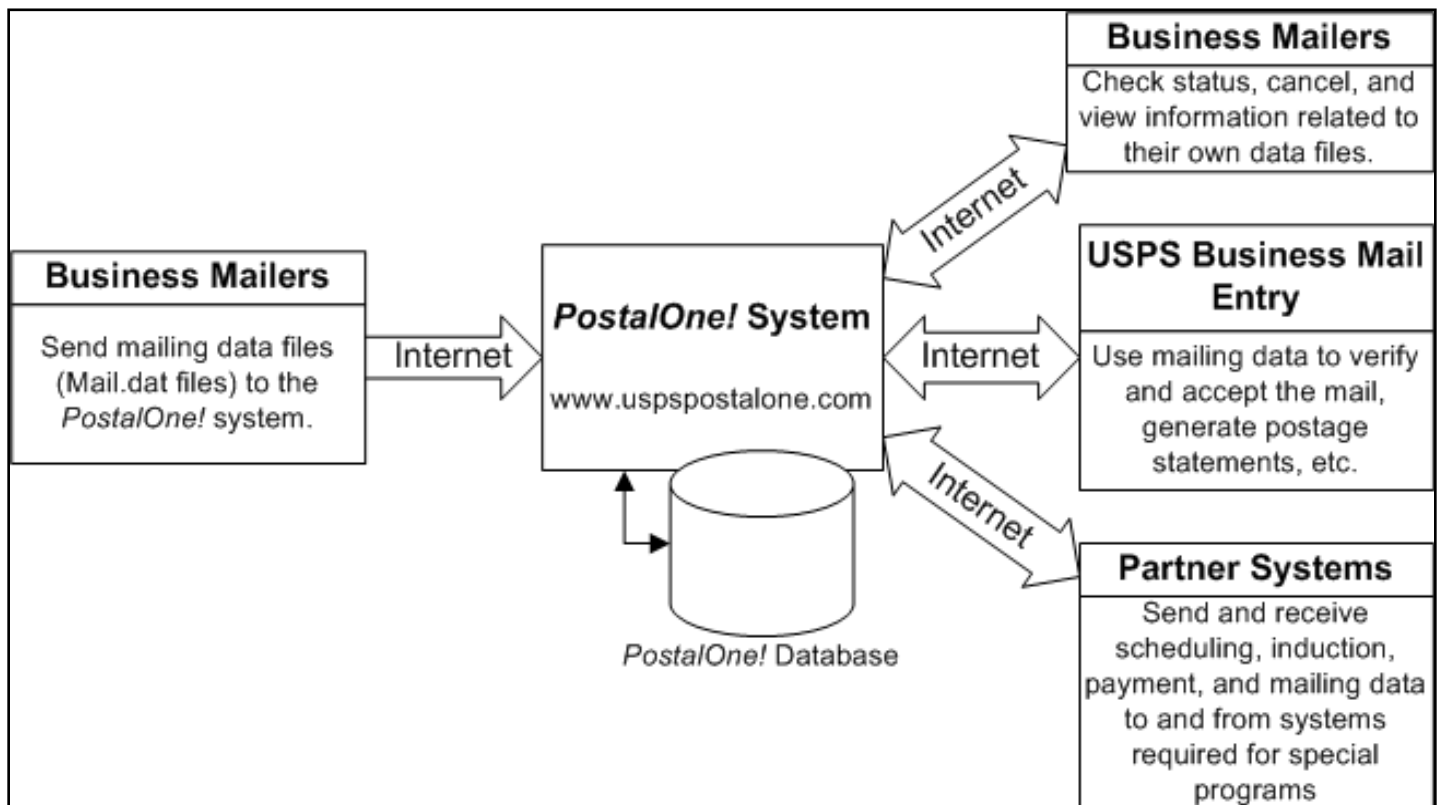

Figure 4-1 The *PostalOne!* System - Electronic collaboration via the Internet

4.1 Key Technical Requirements

4.1.1 Internet Connection

The minimum required speed for connectivity is 56 kps. For optimal performance, the *PostalOne!* suggests using a broadband internet connection.

Note: Some service providers grant users faster download than upload speeds. As the file transfer tool is uploading, rather than downloading, files, limits placed on upload speed may impact performance. Users with long upload times may want to review their Internet connection speeds to see if the issue is the upload limits placed by their service providers.

4.1.2 Formatted Mail.dat files

To participate in the *PostalOne!* program, the files and fields must comply with the *PostalOne!* implementation of the Mail.dat File Specification. *PostalOne!* validation and business rules for Mail.dat may differ from what is identified in the IDEAlliance Mail.dat specification. Additional technical details concerning Mail.dat file format and content, as used by the *PostalOne!* system, are provided in Section 4.2, Configuring Mail.dat files for Processing.

Note: Participants must successfully transfer supported versions of Mail.dat files to the Testing Environment for Mailers (TEM) *PostalOne!* System before transferring Mail.dat files to the Production *PostalOne!* System.

4.1.3 Methods of Transferring Files (Manual and Batch)

The *PostalOne!* system provides a choice of transfer methods for Mail.dat files. Mailing data files can be transferred manually (manual) or unattended (batch).

Manual mode for Mail.dat 13-1 and later. In manual mode, customers log on to their client application, select the files they want to send, and then upload them. This mode is called manual because a person must actively use the software client provided by the *PostalOne!* system and be present while the files are transferred. See the *PostalOne!* Mail.dat Client Software for instructions to download the *PostalOne!* Mail.dat Client used for all Mail.dat versions in manual mode.

4.1.4 Batch mode for Mail.dat 13-1 and later

Customers must download and configure the new software client. See Section 2 *PostalOne!* Mail.dat Client Software for instructions to download the *PostalOne!* Mail.dat Client used for all versions of Mail.dat in batch mode. When using batch mode, the *PostalOne!* servers return file transfer status feedback to the senders workstation automatically. The feedback information (receipt file) is written to the client's workstation in either XML or ASCII text formats. A third format, enhanced XML, is supported. The receipt files may be loaded into a spreadsheet or your own database for storage and viewing. For more information on the receipt file format and its contents, see Status Receipt File Layout, Section 9.

Note: If network failure prevents validation from completing, the system will attempt to reconnect to the network and resubmit the batch job a configurable number of times, currently set to three times. A delay, currently set to five minutes, will occur between each submission to provide time for the network issue to resolve. Files will not fail validation until all resubmissions have failed.

4.1.5 Technical/Operational Prerequisites

As previously discussed, the system is Internet-based and the basis for conducting business electronically for the successful exchange of mailing data information between business mailers and the Postal Service. As a result, an Internet-based infrastructure must exist that is compatible with the *PostalOne!* system.

This section provides details on all of the technical and operational prerequisites necessary to successfully send mailing data files to the system. Topical areas include:

4.1.5.1 Hardware prerequisites.

The base requirements for the hardware elements of the computer system that will access and send mailing data files to the *PostalOne!* system such as the recommended physical memory amounts.

The minimum workstation requirements to send data files are a PC with a Pentium IV 1 GHz processor, Microsoft® Windows® 95/98/2000/XP/Windows 7 operating systems, and 256 MB RAM. Depending on the size of the Mail.dat job, RAM requirements vary. The table below details the RAM requirements.

Net Size of Mail.dat Job (MB) *	Recommended Physical RAM
0 – 10	64 MB
11 – 25	128 MB
26 – 50	256 MB
> 50	>1024 MB
Note: * The net size of a Mail.dat job is calculated as the total size of all files associated with a job, minus the size of the PQT, SNR, and PDR files.	

Table 4-1 RAM Requirements Based on Net Job Size

For Mail.dat jobs with a large total file size, file transmission may result in an Out of Memory error on the Mail.dat client software. To resolve this issue, modify the Java™ Virtual Machine (JVM) memory arguments, and then retry the transmission. For more information on how to modify the JVM memory settings, see Section 4.1.3. For detailed information on physical RAM and JVM memory recommendations with *PostalOne!* Mail.dat client software, see How Much Memory to Allocate , Section 2.1.5.

Note: UNIX workstations can also be used to send mailing data files in Batch processing mode. For more details, see Section 2.3.4, Additional Logging.

In addition to the Validation Log, by default the Mail.dat Client software will create two other log files, the Client Log file (default location: C:\client.log) and the Debug Log (default location: C:\debug.log). The Client Log file will contain informational messages, warnings and errors that the Mail.dat Client outputs while running. The Debug Log file contains the same information as the Client log file, as well as debugging level information. If users are interested in monitoring logging of the Mail.dat Client, they can monitor the Client Log file for events. The Debug Log is used by the *PostalOne!* Help Desk while investigating issues.

Users may also find it useful to monitor the Standard Out and Standard Error streams when the Mail.dat Client software is running. All Debug level and above events are outputs to Standard Out.

The Mail.dat Client uses the log4j logging system to generate log events. These settings can be customized by modifying the log4j.properties files in the confer folder. The log4j system is an industry standard Java logging library. More information can be found at this online site: [Apache log4j 1.2](#).

4.1.5.2 Software prerequisites.

The base requirements for the software elements of the computer system that will access and send mailing data files to the *PostalOne!* system. Windows workstations used for transferring files should be configured with the following software:

A text editor or third-party Mail.dat viewer. This software is necessary to analyze the contents of the Mail.dat files and resolve any file format or content problems reported by the *PostalOne!* system.

Java 1.6 or greater. For Mail.dat versions 09-1 and above, Java is automatically installed, if necessary.

PostalOne! Mail.dat Client Software. See Section 2, *PostalOne!* Mail.dat Client Software.

The Batch Processor has a different requirement. For information about batch mode requirements, see Section 2, *PostalOne!* Mail.dat Client Software.

4.1.5.3 Networking prerequisites.

The base requirements for the networking elements of the computer system that will access and send mailing data files to the system, such as firewall settings.

The File Transfer software (Manual mode) uses http/https protocol to communicate through ports 80 and 443. The destination address is mdx.usps.com which corresponds to a virtual IP which is accessible to the internet and redirects to servers to a USPS secure enclave in a data center in Eagan MN. If firewall settings prevent http/https communication through ports 80 and 443, reconfigure the firewall to allow this traffic. Port 443 is the standard port for https communication.

The *PostalOne!* Mail.dat client software can be configured to work through a proxy server when needed. See Section 2.1.10, How to Use a Web Proxy for proxy-related configuration steps.

4.1.5.4 Mail.dat prerequisites.

The base requirements for the actual files sent are in the IDEAlliance Mail.dat File Specification. Submitted Mail.dat files must comply with the IDEAlliance Mail.dat File Specification and the additional business and validation rules implemented by the *PostalOne!* system and noted in this technical specification. This document notes any instances where the *PostalOne!* system differs from the Mail.dat specification, and supersedes the specification in all such instances.

Note: Participants must successfully transfer Mail.dat files to the Testing Environment for Mailers (TEM) *PostalOne!* System before transferring Mail.dat files to the Production *PostalOne!* System.

To accurately configure the Mail.dat files, use this technical specification and the appropriate IDEAlliance Mail.dat File Specification; refer to **Error! Reference source not found.** The current copy of the Mail.dat specification is available to download at [IDEAlliance Mail.dat Specifications](#).

For technical support, contact the *PostalOne!* Customer Support team. See Section 1.6 for contact information.

4.1.5.5 User License Code (ULC) prerequisites.

To participate in the *PostalOne!* program; obtain a valid User License Code (ULC) (sometimes called a provider code) from IDEAlliance, who assigns a ULC to each Mail.dat user. The ULC uniquely identifies the customer to the Postal Service. Customers who generate, update, or pass along Mail.dat files for subsequent use must have a ULC. The Postal Service systems treat the User License Code as case sensitive.

4.1.5.6 CRID and MID prerequisites.

To use Mail.dat, a Customer Registration ID (CRID) is required; a Mailer ID (MID) is optional.

Mail.dat uses the Customer Registration ID (CRID) and Mailer ID (MID) assigned by the USPS to track individual customer locations and to track a mailer within an Intelligent Mail Barcode (IMb). For a Full-Service option mailing, the mailer will provide these IDs to the *PostalOne!* system through the Mail.dat file.

Users who do not log into the Business Customer Gateway (BCG) once a month could have their account disabled due to inactivity.

4.1.5.7 Optional digital certificate prerequisites.

Security certificates are not required for Mail.dat transmissions in either batch or manual submissions.

The *PostalOne!* system uses Secure Sockets Layer (SSL) Version 3.0 to transfer files safely over the Internet.

SSL is a secure enhancement to the standard Transmission Control Protocol/Internet Protocol (TCP/IP). It uses a combination of cryptographic processes to authenticate the host computers, and to encrypt and decrypt data transferred between them.

4.1.5.8 Log Files

In addition to the Validation Log, by default the Mail.dat Client will create two other log files, the Client Log file (default location: C:\client.log) and the Debug Log (default location: C:\debug.log). The Client Log file will contain informational messages, warnings and errors that the Mail.dat Client outputs while running. The Debug Log file contains the same information as the Client log file, as well as debugging level information. If users are interested in monitoring logging of the Mail.dat Client, they can monitor the Client Log file for events. The Debug Log is used by the *PostalOne!* Help Desk while investigating issues.

Users may also find it useful to monitor the Standard Out and Standard Error streams when the Client is running. All Debug level and above events are outputs to Standard Out.

The Mail.dat Client uses the log4j logging system to generate log events. These settings can be customized by modifying the log4j.properties files in the confer folder. The log4j system is an industry standard Java logging library. More information can be found here: [Apache log4j](#).

4.2 Configuring Mail.dat files for Processing

This section provides details about the Mail.dat File Specification relating to data elements used by the *PostalOne!* system. Specifically, it covers required files and fields, typical problems, sending job updates, and file processing.

4.2.1 Mail.dat Submission Process

The Mail.dat submission process involves five steps. These steps are file validation and upload, server validation and upload, report and postage statement generation, verification of the mailing, and finalization (billing) of postage. Payment for postage occurs as a separate process. At the time of postage statement finalization, funds must be available in either a Centralized Account Payment System (CAPS) account or a local trust account.

4.2.1.1 File Validation and Upload

Customers must download the Mail.dat Client to their machine. The Mail.dat Client validates the fields in the files and uploads the files to the database after successful validation. If validation is not successful, error messages are returned to indicate which fields have incorrect values. The validations performed are listed in Section 11.

4.2.1.2 Server Validation and Upload

Server validations are performed to verify the correct values in the fields. Some fields may only be checked for correctness with processing on the server side. If the file passes server validation, it is uploaded to the database. If the file messages are returned to the user. The error messages for both the client and the server validation appear in Section 10. The Postal Wizard Tables are populated using the Mail.dat data. These tables are the same tables used to generate postage statements no matter if the data is entered by Postal Wizard, BMEU manual entry, Mail.XML or Mail.dat.

4.2.1.3 Reports and Postage Statement Generation

The Mail.dat client software displays upload status, Qualification Report generation status, and Postage Statement generation status. The CSM Container Status determines what reports to generate. The original status generates Qualification Reports and the Container and Bundle report for Periodicals. In addition to the reports generated for the original status, the preliminary status generates the estimated postage statements. Estimated postage statements are provided for customer convenience and are not used by the Postal Service. The ready-to-pay status requires the original or preliminary status to be sent before generating the postage statements to be finalized and billed. A transportation status to update container information and detailed shipping information may be sent after the ready-to-pay status.

4.2.1.4 Verification

The Postal Service mail acceptance personnel perform the initial mail verification. Based on the evaluation of the performance based verification module, the Postal Service mail acceptance personnel perform an In-Depth Verification, if applicable. The Postal Service and the mailer then resolve any outstanding issues. Some issues, if left unresolved, result in additional postage charges applied on the postage statement or a requirement to change the postage claimed (for example from automation to non-automation).

4.2.1.5 Finalization

The Postal Service mail acceptance personnel finalize the postage statements. Finalization prevents further changes to the postage statement and debits the account. However for Centralized Postage Payment publishers there is still the ability to change the Advertising Percentage and to add the postage statement to a payment request. The postage statement debits the account on the date stated in the payment request.

The finalization causes the Mail.dat file information to be sent to the Seamless Acceptance and Service Performance (SASP) system for processing if the Mail.dat job contained any full-service mailpieces, non-full-service containers or an origin submission which was checked in via the Self Service Terminal. The SASP system delivers the start-the-clock information and the Address Change Service information to the Postal Service and the mailers.

4.2.2 Seamless Acceptance

The Seamless Acceptance process is designed to leverage Intelligent Mail Barcodes to achieve a seamless entry and automated verification approach for mail entered into the USPS. Mail presented to acceptance employees at postal and mailer facilities currently are subject to a manual verification process designed to validate proper postage is paid and collected.

4.2.2.1 Seamless Acceptance Mailing

A mailing is identified as a Seamless Acceptance or Seamless Parallel Run mailing when the .seg eDoc Sender CRID field is designated in *PostalOne!* and the .seg Bypass Seamless Acceptance field is blank. When these initial conditions are met Seamless Acceptance validations are run on the eDoc to qualify it for automated postage statement finalization on the mailing date.

4.2.2.2 Seamless Acceptance validations

1. Customer Registration ID (CRID) profile - .seg eDoc Sender CRID must be configured for the mailings processing categories, postage statement types, service levels.
2. Mail.dat validations - The eDoc must meet both eInduction and Seamless Acceptance specific validation including unique container (IMcb) and tray (IMtb) barcodes which meet length and formatting standards. Validation failures will trigger an error message for Seamless Acceptance or a warning message for Seamless Parallel Run mailings. For the complete list of Seamless Acceptance Mail.dat validations see Section 11.
3. Balance check - The payment account balance must be sufficient.
4. Seamless and Seamless Parallel Run Non-full-service and Non-Mixed Full-Service submissions are required to provide a .pdr or .pbc file, and the following fields are required in the .csm file:

- a. .csm Scheduled Ship Date
- b. .csm Scheduled Ship Time
- c. .csm Scheduled Induction Date
- d. .csm Scheduled Induction Time
- e. .csm USPS Pick Up
- f. .csm eInduction Indicator

4.2.2.3 Seamless Acceptance Processing

SASP will compare Seamless Acceptance eDocs against SV, MPE and FS IMD scan results to perform the following Seamless Acceptance verifications:

- Postage Payment
- Content
- Piece Weight
- Presort
- Barcode Quality
- Undocumented Pieces
- SASP will calculate the sampling errors, determine if they are statistically significant, and calculate the postage adjustment factor (PAF) of each error, and apply applicable postage impacts to the mailers mailings for the current assessment period.

4.2.3 Required Files and Fields

A Mail.dat job sent to the *PostalOne!* system consists of a maximum of twenty one files. Each file in the set consists of a different record type. Key fields within each record type provide links from one file to another, thus creating a hierarchical relationship between the files. The *PostalOne!* system uses the standards as specified within the IDEAlliance Mail.dat specification, with a few exceptions. The rules specific to USPS and the *PostalOne!* system have been copied from the IDEAlliance Mail.dat specification, and placed in this technical specification. In any instance where there is a difference between this technical specification and the IDEAlliance Mail.dat specification, the rules in this technical specification take precedence.

The *PostalOne!* system supports seventeen files with details on the relationship constraints described below. The *PostalOne!* system does not support the following six files.

- Postage Statement Record
- Seed Name Record
- IJ / Container Relationship Record
- Manifest Individual Record (use the PDR/PBC file instead)
- Manifest Summary Record (use the PDR/PBC file instead)

Note: Only the Conventional Presort and the MLOCR Mail.dat presentation categories are implemented and tested in the *PostalOne!* system.

For a listing of the files available for Mail.dat processing in the *PostalOne!* system and their purpose, see Section 3,

Mail.dat File Definitions. To review the field level validation performed by the *PostalOne!* system, see Section 5, Section 5 also notes any fields required by the *PostalOne!* system, but not marked in the Mail.dat specification. To review the error messages, see Section 11, Error Messages.

4.2.4 Relationship Constraints Description

The relationship constraints validated by the validation module, based on the different Mail.dat presentation categories for all presentation categories are:

- All key field relationships between the different records of the Mail.dat file are validated, based on the presentation category.
- All Mail.dat records are validated to ensure that no duplicate records exist based on the key field combinations.
- Mail.dat records are validated to ensure that all referenced related records are present, for any given record of a Mail.dat job.

4.2.4.1 Header File

HDR: (Required for all presentation categories)

- The Header File is the highest file of the single submission. The Job ID is the key field contained in the Header File.
- The Job ID field in the header must be unique within the *PostalOne!* system for 13 months. After 13 months Job IDs can be reused.
- The header file identifies the total file record count for each file type. The record count must match the number of records received, or else file is incomplete (invalid).
- All header records present in a HDR file must belong to a single job.
- Each *PostalOne!* submission for a Job ID must have a current header record with a unique Header History Sequence Number. All previously submitted header records have to be updated so they are history rather than current records.
- There must be only one current header record having HDR Header History Status set to value C = Current.
- The *PostalOne!* system does not load or validate any header record having HDR Header History Status set to value H = History.
- To successfully pass Mail.dat validations, the Mail.dat Presentation Category field in the Header record must be populated with one of the following: P = Conventional Presort, M = MLOCR, N = Single Piece, C = Consolidated Internal Copal Job with MLOCR and Conventional Presort, or E = Consolidated External Copal Job with MLOCR and Conventional Presort.
 - The value of N is used for Priority Mail submissions using .mpu Mail Piece Unit Rate type of T, E, E1, E2, E4, E5, E6, E7, E8, E9, G, J, O, K, T1, T2, T3, T4, and T5
 - P is used to denote logical trays, sacks, and pallets in a conventional presort. Sibling trays will be tied to logical trays and sibling pallets will be tied to logical pallets in a presort job.
 - M is used to denote physical tray, sack, or pallet in a logical mailing.
 - Mixing of physical and logical handling units and containers in internal copalletization and third party (external) copalletization processes should use a value of C and E respectively.
- The *PostalOne!* system will accept a First-Class Commercial Plus mailing when the following conditions are met:
 - .seg Class Defining Preparation field is populated with 1 (First-Class)
 - .seg Principal Processing Category is populated with PF (Parcel First-Class)
 - .mpu Rate Schedule is populated with P (Commercial Plus)

- The .mpa Permit number used must be associated to Commercial Plus Pricing rates.

4.2.4.2 Segment File

SEG: (Required for all presentation categories)

The Segment File separates parts of a mailing that require different processing. A Header File may contain multiple Segment Files (except MLOCR mailers must have only one Segment File).

- There must be one or more segment records present in the SEG file for the unique Job ID present in the header file.
- No duplicate segment records should be present in the SEG file based on the key fields of this record. If there is a new combination of field values for a segment record this must be designated with a different Segment ID.
- If there are all full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is F and for the job a PDR file is expected to document the full-service mailpieces. If there are some full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is M and for the job a PDR file is expected to document all mailpieces. If there are no full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is blank and a PDR or PBC file may be submitted but is not processed for full-service. For the non-full-service mailing the PDR/PBC Wasted or Shortage Piece Indicator values X, T, W and S are processed. For a non-full-service mailing, the PDR/PBC file can be submitted for all mailpieces or only the mailpieces with PDR/PBC Wasted or Shortage Piece Indicator values X, T, W and S.
- The .seg Container and Bundle Charge Method 2 (Charge all to one of the publications) will no longer be supported.

4.2.4.3 Mailer Postage Account

MPA: (Required for all presentation categories)

The MPA file designates the preparer (optional), the owner (optional in some cases) and the permit holder for the postage statement.

- The number of mailer postage account records present must match the number in the header file.
- No duplicate mailer postage account records should be present in the MPA file based on the key fields of this record. If there is a new combination of field values for a Mailer Postage Account record this must be designated with a different MPA - Unique Sequence/Grouping ID.
- For metered or precanceled stamp postage, *PostalOne!* validation requires an MPA file detailing the permit to be charged for additional postage. The additional postage MPA ID must be used in the Additional Postage MPA ID field of the MCR file. Additional postage may only be charged to a permit imprint account.
- For mailings including full-service pieces SEG Full-Service Participation Indicator set to M for mixed or F for full-service. For Metered: Lowest MPA Postage Payment Method set to L = Metered: Lowest, the *PostalOne!* system will calculate the postage affixed as the lowest applicable piece price in the mailing minus the Full-Service discount. Example: If the lowest level presort is 5-digit, the calculated postage affixed is 5-digit minus the full-service discount. If the lowest level presort is 3-digit, the postage affixed is the 3-digit minus the full-service discount. When using Metered: Lowest, only the piece rate applies. Metered: Neither should be used to include the pound rate as well. (Business rule: Metered: Lowest will never result in a refund.)
- The .mpa Postage Payment Method field cannot be populated with L = Metered: Lowest for a non-identical weight mailing.
- For mailings including full-service pieces SEG Full-Service Participation Indicator set to M for mixed or F for full-service. For Metered: Correct MPA Postage Payment Method set to C = Metered: Correct, the *PostalOne!* System will calculate postage affixed as equal to the price for the each mailpiece in the mailing (including the full-service discount if applicable). (Business rule: Metered: Correct will never result in a refund or the mailer owing postage.)
- If the Primary MPA ID in the MPU/Component Relationship (MCR) file of an update job is different from the original MPA ID, the new MPA ID must match the MPU – Unique Sequence/Grouping ID in the Mailer Postage Account (MPA) file of the first submission (original or preliminary).

- The Postage Payment Option field in the MPA file is required. Jobs that do not have this field populated fail validation.
- The USPS Publication Number, Permit Number, and Mail Owners Lcl Permit Ref Num / Intl Bill Num cannot have leading zeroes and the job will fail validations if those fields are submitted with leading zeroes.
- The Account Number field is supported for Mail.dat version 13-1 files and above, in addition to the Permit Number for payment processing. If the Account Number field is populated, it indicates that the customer wishes Mail Anywhere processing and validations.

4.2.4.4 Component File

CPT: (Required for all presentation categories)

The component record designates the content of the mailpiece. There may be one or more components in a mailpiece.

- There must be one or more component records present in the CPT file for the unique Job ID present in the header file.
- No duplicate component records should be present in the CPT file based on the key fields of this record. If there is a new combination of field values in a Component record this must be designated with a different Component ID.
- The .cpt Component – Class field must match the .mpu Mailpiece Unit – Class field except for when enclosures are included in the mailing.
- Support for Rate Type: V = FCM Election Mail ended with Release 37.

4.2.4.5 Component Characteristics Record File

CCR: (Optional for all presentation categories)

The component characteristics record designates the content of the mailpiece, applicable incentive and/or applicable fee.

- There may be from zero to many component characteristics for a component in a mailpiece.
- No duplicate characteristic records should be present in the CCR file based on the key fields of this record.
- The Postal Service tracks the following content for letters or flats in First-Class Mail postage statements, reply card or reply envelope, only contents that are not required to be mailed FCM, DVD/CD or other disk, and round trip only: one DVD/CD or other disk.
- The Postal Service tracks the following content in Standard Mail postage statements, product sample or letter-size or flat mailpiece containing a DVD/CD or other disk.
- A mailing will be processed as round trip only if there is one DVD/CD or other disk when the .mpu Mailpiece Unit – Processing Category field is populated with LT or FL and the .ccr Characteristics field is populated with RT.
- To claim an incentive populate the Characteristic Type = I and the appropriate Characteristic. Program specific conditions are available in each Program guide (search by Promotions on RIBBS). Any Full Service discount will be deducted first then the incentive will be applied to derive the total postage for each line.

Incentive Programs Enrollment

- All participants can enroll in incentive programs through the Business Customer Gateway (BCG). Enrollment is recommended to be completed at least two hours prior to presenting the first qualifying mailing. During enrollment, mailing agents may select the Mail Service Provider (MSP) designation. Selecting the MSP designation enables mailing agents to use the eDoc enrollment feature (refer to next section). If a participant is also a mail owner, the MSP designation should be selected. A mail owner is defined as the business entity, organization, or individual who makes business decisions regarding the mailpiece content, directly benefits from the mailing, and ultimately pays for postage on the mailpiece directly or by way of a mailing agent)
- eDoc enrollment using Mail.dat (or Mail.XML) requires the MSP to accept the MSP legal declaration and promotion terms through the BCG at least two hours prior to presenting the first qualifying mailing. An MSP can subsequently enroll their clients in real-time when submitting eDocs which are claiming an incentive discount. During postage statement finalization, *PostalOne!* will validate that the MSP CRID in the eDoc is enrolled as an

MSP, proceed to enroll the client(s) in the incentive program based on the Mail Owner field data in the eDoc. *PostalOne!* will only then calculate the discount if there are no system Warnings. *PostalOne!* will perform validations and generates a Warning for MSP CRIDs that are not registered (Preparer field) and for invalid CRIDs or MIDs. *PostalOne!* will process the eDoc in the case for Warnings (i.e., not fail files and not extend the promotion claimed in the eDoc). Note: Mail Owner (clients) need not be pre-registered if the MSP is pre-registered and the MSP purposely intends to use the eDoc enrollment functionality.

Promotions and Incentives

- The .cpt Content of Mail field is not supported.
- Enrollment is based on the Customer Registration ID (CRID). CRIDs which have permits linked to them must be enrolled.
- The incentive discount will accrue to the permit populated in the (.mpa) Permit Holder field. It must be linked to an enrolled CRID, unless the (registered) mailing agent uses the eDoc enrollment feature whereupon the *PostalOne!* system will apply the discount to the permit populated in the (.mpa) Permit Holder field.
- The *PostalOne!* system will apply only one percentage promotional discount to a given mailpiece at the postage statement line level.
- For all promotions that provide a discount at the time of mailing, pieces claiming the incentive must bear the mobile barcode or technology and be submitted on a separate Postage Statement.
- For the Earned Value program, the permit in the Permit Holder must be registered for the Earned Value program. The Earned Value program is not supported by eDoc enrollment. When redeeming Earned Value credits, submit the .CCR with the RR Characteristic value.
- The *PostalOne!* system shall be enabled such that the Earned Value can be combined with promotions that provide an upfront discount at the time of mailing. Both discounts will be applied to the same Form 3600, 3602 Regular or Non-profit if they are indicated in the eDoc. If a mailer claims both the Emerging and Advanced Technology and the Color Transpromo Promotion in the proposed promotions for the 2015 calendar year, the highest yielding discount will be applied at the time of mailing since both discounts are at the piece level.
- The *PostalOne!* system will account any incentives awarded on shorted or spoiled pieces. When the pieces are shorted or spoiled, the *PostalOne!* system will provide the total number of pieces and account for any incentive given to the pieces on the postage statement.
- For more detailed information on current promotions see the Promotions and Incentives page online on RIBBS.

4.2.4.6 Mailpiece Unit File

MPU: (Required to describe characteristics of the mailpiece)

A mailpiece must contain one or more components.

- There must be at least one or more mailpiece unit records present in the MPU file for each segment record present in the segment file.
- No duplicate mailpiece unit records should be present in the MPU file based on the key fields of this record. If there is a new combination of field values for a MPU record this must be designated with a different Segment ID and/or MPU ID combination.
- Rate Type: V = FCM Election Mail support is no longer supported
- The .mpu Rate Type will not be used as a postage statement generation variable when the .hdr Presentation Category is populated with N = Single Piece for Priority Mail.
- The .mpu Standard Flat Type field is not supported in IDEAlliance version 14-2 and above. To identify a mailing as Catalog populate the .ccr Characteristic Type with C = Content and .ccr Characteristic with CT = Catalog.
- When the .mpu Surcharge field is populated with D = Dim Weight, the .mpu Length, Width, and Thickness must be populated. The *PostalOne!* system will use the greater of the calculated Dimensional Weight or the provided .mpu Mail Piece Unit Weight to determine postage calculations.

4.2.4.7 Mailpiece Component Record File

MCR: (Required to relate MPU to CPT and MPA)

The Mailpiece Component file is required to indicate what components are in what mailpieces.

- There must be at least one or more mpu/component relationship records present in the MCR file for each mailpiece unit record present in the MPU file.
- There must be at least one or more mpu/component relationship records present in the MCR file for each component record present in the CPT file.
- No duplicate mpu/component relationship records should be present in the MCR file based on the key fields of this record. There must be a MCR record for every combination of Segment ID and/or MPU ID and/or Component ID. The Primary MPA ID must match an MPA ID submitted in the MPA file.

4.2.4.8 Postage Account Record File

PAR: (The optional PAR record is not allowed for the SEG Mail.dat Presentation category value MLOCR, or the SEG Class Defining Preparation value Periodicals)

The postage account record is used to make adjustments to postage while the Mail.dat file CSM Container Status is ready-to-pay and before finalization of postage.

- The *PostalOne!* system allows mailers to indicate shorted pieces (listed in the postage statement, but never created) and spoiled or wasted pieces (listed in the postage statement and created, but removed prior to mailing), and indicate how postage should be adjusted. Claims for spoiled or wasted pieces after finalization require the mailer to follow the existing refund request process using PS Form 3533 Application for Refund of Fees, Products and Withdrawal of Customer Accounts (see Postal Bulletin 22252, 2-12-09).
- Multiple PAR records can be submitted to account for spoilage, but they must be submitted at the same time and can only be submitted once per job. All PAR records must be submitted when all non-sibling CSM files have a container status of R or X. Using the PAR record will correctly deduct the postage amounts. The PAR piece count is not available for verification purposes to the BMEU or on the CAPS statement. The postage will still be correct. A single postage statement may have no more than one adjustment; however, multiple PAR records can apply to the same postage statement. Adjustments can only be applied to postage statements with USPS Processing Due (UPD)) status.
- The .par Adjustment types of 3= Spoilage and 4 = Shortage are not supported for Periodicals, Standard/Periodical Co-Mailings, Package Services Parcels (Non Machinable, Machinable, Irregular) or Priority Mail. An adjustment will not be applied.
- To support the spoilage and shortage process in the *PostalOne!* systems, the postage statements (including the downloadable versions) display the summarized data for spoiled, wasted, or shorted pieces on a specific line.
- Because the PAR records are optional, there can be zero or more postage adjustment records present in the PAR file for each mailpiece unit record present in the MPU file.
- Because the PAR records are optional, there can be zero or one postage adjustment record present in the PAR file for each component record present in the CPT file.
- Because the PAR records have a PAR Sequence Number, there can be one or more postage adjustment records present in the PAR file for each MCR record present in the MCR file.
- For each PAR file submitted with Ready to Pay Adjustment Status = R, there must be an associated CSM file with Container Status set to R = Ready to Pay.
- The MPA – Unique Sequence/Grouping ID in a PAR record must refer to a permit in an MPA file with Postage Payment Method set to P = Permit Imprint or G = OMAS Imprint.
- No duplicate postage adjustment records should be present in the PAR file based on the key fields of this record. If there is a new combination of field values for a PAR record this must be designated with a different Segment ID and/or MPU ID and/or Component ID and Sequence Number combination.
- Only one PAR file submission is allowed per Mail.dat job.

- The PAR piece count data will be available for verification purposes to the BMEU on Reconciliation reports. The reconciliation report will show spoiled piece counts and will reconcile correctly.
- The CAPS system will receive the total number of pieces minus spoiled/wasted pieces that did not pay postage for postage statement piece counts.
- The system deducts the adjustment amount from the first postage statement found for that same permit holder that can accommodate the adjustment. The system will reject the PAR file if no postage statement exists for the identified Permit Number that can accommodate the full adjustment. When an incentive is claimed, the incentive amount on the spoiled pieces should be deducted from the Adjustment Amount.

4.2.4.9 Container Summary Record File

CSM: (This record type contains a record for each container and handling unit)

The Container Summary provides information about both Containers and Handling Units at the container or handling unit level. Container Summary records contain one or more Container Quantity records.

- The .csm is required for all update or change submissions.
- No duplicate container summary records should be present in the CSM file based on the key fields of this record. The container summary includes records for both containers and handling units in the mailing. If there is a new combination of field values for a CSM record this must be designated with a different Container ID.
- For all presentation categories, there must be at least one or more container summary records present in the CSM file for the unique Job ID present in the header file.
- The .csm Entry Point – Actual/Delivery – Locale Key will be used to assign a Locale Key to a facility on the Postage Register instead of a Zip Code.
- If the Sibling Container field in the CSM record is set to Y, the following fields must have values for the Sibling Container:
 - Job ID
 - Segment ID
 - Container ID of the Sibling Container
 - Container Type
 - Sibling Container Indicator
 - Sibling Container Reference ID
- Optionally, the fields in the CSM record that may have values for the Sibling Container are:
 - Label IM Container or IM Tray Barcode
 - Label: Destination Line 1
 - Label: Destination Line 2
 - Label: Contents Line 1
 - Label: Contents Line 2
 - Label: Entry (Origin) Point Line
 - Label: User Information Line 1
 - Label: User Information Line 2
 - Label: Container Label CIN Code

Note: All other fields in this CSM record for the sibling container **MUST** be left blank.

- The Original/Sibling Container relationship is validated if a Sibling Container record exists, its original must be present (stating all the required values that are attributed to the sibling container).

- If a container references a parent container, the parent container must be a valid Container ID in the Container Summary Record.
- Individual container counts and the total container count cannot exceed the total number of pieces in a submitted postage statement.
- For Package Services the .csm Number of Copies can be greater than the .csm Number of Pieces when the .pqt Package Level is S = Multi-PC Parcel and .pqt has copies greater than pieces.
- Container and Tray barcodes are required for Full or Mixed Service mailings. These must be provided in the Label: IM Container or IM Tray Barcode. For sacks or trays containing full-service mailpieces, there is a threshold of 1% for duplicate barcodes compared to the total trays or sacks in the job. For containers containing full-service mail, there is no threshold (0%) for duplicate barcodes. The choice is to obtain the unique barcodes to meet this threshold for full-service or mixed full-service mailings or to make the mailing non-full-service
- For full-service or mixtures of full-service with non-full-service mail, there are two methods for handling convenience pallets (a.k.a. parent pallets) in a Mail.dat file:
 - Do not include the convenience pallet in the Mail.dat file
 - Include the convenience pallet in the Mail.dat file, populate the CSM Label: IMContainer or IMTray Barcode field, and put a barcode placard on the pallet. Do not deviate from these two alternative procedures. Including the convenience pallet in the file and not populating the CSM Label: IM Container or IM Tray Barcode field results in an error code which states, Full-Service Processing, the .csm Label: IM Container or IM Tray Barcode field contains an invalid value: it must contain a 21 character IMcb.
 - Including the convenience pallet in the file, populating the CSM Label: IM Container or IM Tray Barcode field and not placing the barcode placard on the pallet results in noncompliance with required container scans.
- For copalletization, when the Included in Other Documentation field is L an OCI file must be submitted.
- For copalletization, when the Included in Other Documentation field is O the container type must be a sack container type, V, S, 1, 2, 3, 4, or 5 for bundles on pallets or a tray container type for trays on pallets.
- The system will use the CSM Container Type, CSM Container Level, SEG Processing Category, and CSM Number of Pieces to identify trays that do not meet minimum piece requirements or exceed maximum piece requirements for automation mail in the PS Form 3600 First-Class Mail Postage Statement – Part A. These trays will be highlighted in the Qualification Report on the Dashboard, based on the field combinations in the table Requirements for Number of Pieces in trays for the CSM file Container Type field values: O = 1 Tray, T = 2 Tray, E = EMM Tray, and L = Logical Tray.
- The system will process the CSM Included In Other Documentation field value: I = Internal co-palletization indicator from the Origin Job - Original Container. The value of I will indicate to the system that will postage statements shall not be required to be finalized prior to submission of the consolidator file set. A CSM update cannot contain both values O and I in the CSM Included in Other Documentation field in the same mailing/presort. If the original Included in Other Documentation field in the CSM contains O, then I is not an acceptable value; If the original Included in Other Documentation field in the CSM contains I then O is not an acceptable value.
- The CSM Included In Other Documentation field is a postage statement variable and generates unique Postage Statements for origin submissions of tray based copal or consolidator submission of bundle based copal. See Table 4-1 Requirements for Number of Pieces in Trays

CSM Container Level	SEG Processing Category	CSM Number of Pieces
AC = Mixed AADC AA = AADC	LT = Letters CD = Cards	Greater than 149
AB = Mixed ADC Z = ADC	FL = Flat	Greater than 89
G = 5 Digit (Auto/Presort) I = 5 Digit (Presort Only) J = 5 Digit (Barcode Only)	LT = Letters CD = Cards	Less than 150

M = 5D Scheme (Presort) N = 5D Scheme (Auto, Presort) P = 5D Scheme (Barcode) R = 3 Digit (Auto, Presort) S = 3 Digit (Barcode) T = 3 Digit (Presort) U = 3 Digit (CR, Auto, Presort) V = 3 Digit Scheme		
G = 5 Digit (Auto/Presort) I = 5 Digit (Presort Only) J = 5 Digit (Barcode Only) M = 5D Scheme (Presort) N = 5D Scheme (Auto, Presort) P = 5D Scheme (Barcode) R = 3 Digit (Auto, Presort) S = 3 Digit (Barcode) T = 3 Digit (Presort) U = 3 Digit (CR, Auto, Presort) V = 3 Digit Scheme	FL = Flat	Less than 90

Table 4-1 Requirements for Number of Pieces in Trays

- For Mail.dat files, the CSM Postage Statement Mailing Date field values cannot span the price change date; within a job, these dates must be all before or all after the price change.
- When the eInduction indicator is set to Y, the job must meet the following criteria to pass client validations regardless of Full-Service Participation Indicator:
 - All pallets with Container Types P, H, A, G, D, R, C, or Z must have the .csm Label: IM Container Or IM Tray Barcode populated with a 21 character value starting with 99M.
 - The .csm eInduction Indicator field is not required at the handling unit (sack/tray) level, neither is the .csm Entry point - Actual / Delivery - Locale Key field. If you do mark a handling unit for eInduction then you must provide a Locale Key value.
- Containers allocated to virtual sacks will map parent pallets to the pallet lines on the Periodicals 3541 Postage Statement.
- Physical containers can link to logical containers in presort mailings.
- Sibling containers allocated to logical trays are allowed to populate the Label: IM Container Or IM Tray Barcode, for a Container Summary Record.

4.2.4.10 Container Quantity Record

CQT: (Describes characteristics required for qualification reports and postage statements)

The Container Quantity file supports reporting of mailpiece piece count and copy count at both the container and bundle level. This file contains information required to generate postage statements including price levels, and surcharges. For periodicals, information on subscribers and non-subscribers is included.

- There must be at least one or more container quantity records present in the CQT file for each container summary record present in the CSM file.
- No duplicate container quantity records should be present in the CQT file based on the key fields of this record.

- The CQT rate category determines the price on the postage statement. For a CQT representing full-service mailpieces, the rate category must be allowed for full-service mailings. To view rate categories accepted by class and presentation category, see Section 3, Mail.dat File Definitions
- The .cqt Rate Category field value S = Single Piece will be accepted for Standard Mail Flats. Single Piece is not valid for full-service
- For Package Services the .cqt Number of Copies can be greater than the .cqt Number of Pieces when at least one .pqt Package Level record is S = Multi-PC Parcel and the .pqt has copies greater than pieces.
- The warning message indicating that the Total Number of Copies and Total Number of Pieces from all .pqt child handling unit records must equal the .cqt parent records Number of Copies will be turned into an error message. If this condition is not met, the job will fail validation.
- The .cqt Rate Category values NG, NK, N5, or N6 are not supported.

4.2.4.11 Package Quantity Record

PQT: (This record type contains a record for each bundle.)

The Package Quantity record provides bundle information.

- There can be one or more package quantity records present in the PQT file for each container quantity record present in the CQT file.
- No duplicate package quantity records should be present in the PQT file based on the key fields of this record. If there is a new combination of field values for a PQT record this must be designated with a different CQT DB ID and Package ID (unique within the container).
- For Outside-County Periodicals, the package quantity records are required to determine applicable bundle charges, and to produce the qualification and bundle reports.
- All PQT records with the Saturation – ECR Rate Category of A require one or more associated Walk Sequence (WSR) records or the job will fail validation.
- The warning message indicating that the Total Number of Copies and Total Number of Pieces from all .pqt child handling unit records must equal the .cqt parent records Number of Copies will be turned into an error message. If this condition is not met, the job will fail client/server validations.
- For Package Services the .pqt Number of Copies can be greater than the .pqt Number of Pieces when at least one .pqt Package Level record is populated with S = Multi-PC Parcel.

4.2.4.12 Piece Detail Record

PDR: (The PDR is required for full-service)

The Piece Detail Record provides information for full-service at the mailpiece level for each individual mailpiece.

- A PDR or PBC is required when the SEG Full-service Participation Indicator in the segment record value is F or M. This file fulfills the full-service requirement to report the nesting of pieces in the handling units and containers. If there are no full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is blank and a PDR or PBC file may be submitted but is not processed for full-service.
- If this optional file is included, the header file must have the correct record count and file status.
- No duplicate PDR records should be present in the PDR file based on the key fields of this record. If there is a new combination of field values for a PDR record this must be designated with a different Piece ID.
- The *PostalOne!* system allows mailers to indicate shorted pieces (listed in the postage statement, but never created) and spoiled pieces (listed in the postage statement and created, but removed prior to mailing), and indicate how postage should be adjusted. These options are only available for Mail.dat statements pending finalization; shortage and spoilage after finalization require the mailer to follow the existing refund request process using PS Form 3533 Application for Refund of Fees, Products and Withdrawal of Customer Accounts (see Postal Bulletin 22252, 2-12-09).

- Do not deduct the pieces having PDR field Wasted or Shortage Piece Indicator values X, T, W or S from the CQT or CSM or PQT piece counts.
- Spoiled and shorted pieces may be included in a planned job or an update job, so long as they are included prior to the Ready to Pay container status submission. Pieces marked spoiled or shorted cannot be updated to not spoiled or not shorted. The job must be cancelled and resubmitted to change pieces marked spoiled or shorted to not spoiled or not shorted.
- PDR spoilage and shortage cannot be applied to Periodicals, Standard/Periodical Co-Mailings, Package Services Parcels (Non Machinable, Machinable, Irregular), or Priority Mail. It may be claimed with the refund request PS Form 3533 for these types of mail.
- The CAPS system will receive the total number of pieces minus spoiled/wasted pieces that did not pay postage for postage statement piece counts.
- For full-service pieces, there is no threshold (0.5%) for duplicate barcodes. Duplicate values in the IM Barcode field will result in the job being rejected. The choice is to obtain the unique barcodes to meet this threshold for full-service or mixed full-service mailings or to make the mailing non-full-service
- The STID portion of the Intelligent Mail Barcode in the .pdr file must match the .mpu Mailpiece Unit – Class.
- The PostalOne! system will account for an incentive given on a postage statement when the pieces are spoiled or shorted via the .pbc or .pdr.
- A PDR file is required in order to receive Tracking Services.
- For IMpb Non-Compliance processing the .pdr IM Barcode must be:
 - 34 characters in length with a 9 or 11 digit .pdr Piece Barcode
 - 34 characters in length or less and the .up Address must be populated for the corresponding .pdr Piece ID, or the .sfr Service Type must be populated with NP for the corresponding .pdr Piece ID
 - 31 characters in length with a 9 or 11 digit .pdr Piece Barcode
 - 31 characters in length or less and the .up Address must be populated for the corresponding .pdr Piece ID, or the .sfr Service Type must be populated with NP for the corresponding .pdr Piece ID

4.2.4.13 Piece Barcode Record

PBC: (The PBC is required for full-service)

The Piece Barcode Record provides select information for full-service at the mailpiece level for each individual mailpiece.

- A PDR or PBC is required when the SEG Full-service Participation Indicator in the segment record value is F or M. This file fulfills the full-service requirement to report the nesting of pieces in the handling units and containers. If there are no full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is blank and a PDR or PBC file may be submitted but is not processed for full-service.
- The STID portion of the Intelligent Mail Barcode in the .pbc file must match the .mpu Mailpiece Unit – Class.
- The PostalOne! system will account for an incentive given on a postage statement when the pieces are spoiled or shorted via the .pbc or .pdr.
- The *PostalOne!* system allows mailers to indicate shorted pieces (listed in the postage statement, but never created) and spoiled pieces (listed in the postage statement and created, but removed prior to mailing), and indicate how postage should be adjusted. These options are only available for Mail.dat statements pending finalization; shortage and spoilage after finalization require the mailer to follow the existing refund request process using PS Form 3533 Application for Refund of Fees, Products and Withdrawal of Customer Accounts (see Postal Bulletin 22252, 2-12-09).
- Do not deduct the pieces having PDR field Wasted or Shortage Piece Indicator values X, T, W or S from the CQT or CSM or PQT piece counts.

- Spoiled and shorted pieces may be included in a planned job or an update job, so long as they are included prior to the Ready to Pay container status submission. Pieces marked spoiled or shorted cannot be updated to not spoiled or not shorted. The job must be cancelled and resubmitted to change pieces marked spoiled or shorted to not spoiled or not shorted
- PBC spoilage and shortage cannot be applied to Periodicals, Standard/Periodical Co-Mailings, Package Services Parcels (Non Machinable, Machinable, Irregular), or Priority Mail. It may be claimed with the refund request PS Form 3533 for these types of mail.
- The .pbc Barcode field cannot be populated with an IMpb. Imps may only be submitted via a .pdr file using the .pdr IM Barcode.

4.2.4.14 Original Container Information Record

OCI (Optional and used for copalletization):

- The Container ID field in the OCI file must match a Container ID that exists in the CSM file.
- No duplicate package quantity records should be present in the OCI file based on the key fields of this record. There must be an OCI record for each different Container ID. (This container is the tray placed on a pallet or a virtual sack containing bundles placed on a pallet.
- The Original Job ID field in the OCI file must match the Job ID of the corresponding job submitted at the origin site.
- The Original User License Code field in the OCI file must match the User License Code field submitted in the HDR file of the corresponding job submitted at the origin site. The Postal Service systems treat the User License Code as case sensitive.
- The Original Segment ID field in the OCI file must match the Segment ID field submitted in the HDR file of the corresponding job submitted at the origin site.
- The Original Container ID field in the OCI file must match the Container ID field submitted in the CSM file of the corresponding job submitted at the origin site for records in the origin CSM file where the Included in Other Documentation field is O and I.
- The Original Display Container ID field in the OCI file must match the Display Container ID field submitted in the CSM file of the corresponding job submitted at the origin site for records in the origin CSM file where the Included in Other Documentation field is O and I.
- The Original Label IM Container or IM Tray Barcode field in the OCI file must match the Label IM Container or IM Tray Barcode field in the CSM file of the corresponding job submitted at the origin site for records in the origin CSM file where the Included in Other Documentation field is O and I.

4.2.4.15 Un-coded Parcel Address Record

UPA (Optional and used to provide addresses for uncoded parcels)

- No duplicate Piece ID may be presented.
- Provides address information for uncoded parcels.
- The .up Piece ID must match .pdr Piece ID or the .pbc PBC Unique ID.
- The .up file is required to populate address information when the .pdr Piece Barcode does not contain an 11 digit Delivery Point Zip for the corresponding .pdr Piece ID.

4.2.4.16 Special Fees/Charges Record

SFR (Optional and used to provide special fees/charges)

- Provides extra services for Bound Printed Matter, Priority Mail, First Class, and Standard Mail parcels.
- No more than five Service Types can be claimed for a single Piece ID.
- A Piece ID and CQT Database ID in the Special Fees/Charges Record file must match the Piece ID and CQT Database ID in submitted Piece Detail Record file.

- A Piece ID and CQT Database ID in the Special Fees/Charges Record file must match the Piece ID and CQT Database ID in submitted Piece Barcode Record file.

4.2.5 Copalletization Validation Constraints

Comail or copalletized mail contains mail from one or many Mail Owners. The copalletized portion of a mailing job is one of the following:

- Bundles (flat-size mailpieces) of multiple Periodicals publications or issues on pallets
- Bundles (flat-size mailpieces) of Standard Mail
- Trays containing First-Class Mail letters, First-Class Mail cards or First-Class Mail flats
- Trays containing Standard Mail letters

In bundle-based copalletization, the Container Type field in the original Mail.dat CSM file may contain physical sack values S, 1, 2, 3, 4, or 5 and Virtual Sacks if the CSM file Included in Other Documentation field is set to O and I, when at the original site. The CSM file Container Type field for the consolidated Mail.dat file must be populated with V for Virtual Sack.

Consolidated (copalletized) jobs with different presentation categories will be accepted when submitted through Mail.dat. For those cases where MLOCR mail is consolidated with other mail, Client validations will allow consolidated jobs to claim Presentation category P = Presort, C = Consolidated Internal Copal Job with MLOCR and Conventional Presort, or E = Consolidated External Copal Job with MLOCR and Conventional Presort, when the consolidated job includes one or more original MLOCR jobs and/or presort jobs with Presentation Categories M = MLOCR) and/or P = Presort.

In tray-based copalletization, the party doing the copalletization and submitting the OCI file must submit the MPA file in addition to the HDR, SEG, CSM, and OCI files. The MPA file must include the Permit ZIP+4, CRID and account number, if required, of Preparer fields. No other fields in the MPA are required. If there are multiple records included in the MPA file, the Permit ZIP+4 and CRID of Preparer must be the same for each record. The CRID of Preparer and Permit ZIP+4 will be used to display the Original Container Information (OCI) Report on the *PostalOne!* Dashboard.

Copalletized pallets may contain a mixture of any combination of Full-Service, Basic, and Non-Automation mailpieces. Further details describing these scenarios are available at [A Guide to Intelligent Mail Letters and Flats](#) on RIBBS. In some cases the consolidator job of a copalletized mailing can be deleted.

- For tray-based jobs, the consolidator job can only be deleted if it fails server validation.
- Once the tray-based consolidator job is accepted, a delete job cannot be submitted.
- For bundle-based jobs, the consolidator jobs can be deleted if it is submitted with no postage statements or all postage statements in EST, submitted with ready-to-pay (UPD) postage statements that have been cancelled via Mail.dat or submitted with ready-to-pay (UPD) postage statements that have been cancelled via the Dashboard.
- These scenarios allow the job to be deleted before the postage statement data has been sent to SASP. Once the postage statement data has been sent to SASP, the job cannot be deleted

A .csm Container Type of F = Flat Tubs will be accepted for a tray based copalletization mailing. The .mpu Mailpiece Unit – Class must be set to 1 = First-Class or 3 = Standard Mail for a copalletized mailing with a .csm Container Type of F = Flat Tubs.

All origin job trays/bundles that have not been linked with an OCI file or an OriginalContainerLinkageCreateRequest message after fourteen days from the Postage Statement Mailing Date will generate warnings on the BIDS system.

4.2.5.1 Example of Virtual Bundle Assignment in the OCI File for Bundle-based Copalletization

The original Mail.dat file includes the following records:

- Header HDR
- Segment SEG
- Mailpiece Unit MPU

- MPU/C Relationship MCR
- Mailer Postage Account MPA
- Component Record CPT
- Container Summary Record CSM
- Container Quantity Record CQT
- Package Quantity Record PQT
- For full-service, the Piece Detail Record PDR

The consolidators Mail.dat file for bundles assigned to pallets and paid at the consolidator contains the following records:

- Header HDR
- Segment SEG
- Mailpiece Unit MPU
- MPU/C Relationship MCR
- Mailer Postage Account MPA
- Component Record CPT
- Container Summary Record CSM
- Original Container Identification OCI
- Container Quantity Record CQT
- Package Quantity Record PQT

In the example for the Original Job ID C12BO121, the original containers were container type set to virtual sacks for bundles to be placed on pallets. In the Original Job ID, the Original Containers all had the CSM field Included in Other Doc set to O. In the CSM file at the consolidator for this OCI file, the Included in Other Doc field will be set to L for each of the new Container IDs. Each of the new Container IDs will have a Parent Container Reference ID in the CSM file.

File	Job ID	Container ID	Original Job ID	Original Segment ID	Original Container ID
OCI	C12BC331	000001	C12BO121	0001	100001
OCI	C12BC331	000002	C12BO121	0001	100002
OCI	C12BC331	000003	C12BO121	0001	100003
OCI	C12BC331	000004	C12BO121	0001	100004
OCI	C12BC331	000005	C12BO121	0001	100005
OCI	C12BC331	000006	C12BO121	0001	100006
OCI	C12BC331	000007	C12BO121	0001	100007

Table 4-2 Example OCI File (Selected Values) at the Consolidator

File	Job ID	Container Type	Container ID	Parent Container ID	Container Status
CSM	C12BC331	P	000341		R
CSM	C12BC331	V	000001	000341	R
CSM	C12BC331	V	000002	000341	R
CSM	C12BC331	V	000003	000341	R
CSM	C12BC331	V	000004	000341	R
CSM	C12BC331	V	000005	000341	R
CSM	C12BC331	V	000006	000341	R
CSM	C12BC331	V	000007	000341	R

Table 4-3 Example CSM File (Selected Values) at the Consolidator

The container assignment for trays on pallets is similar. The container type must be a tray type. In the case of trays to be placed on pallets already paid using the origin file, the consolidated file assigning the trays to the pallets must contain the following records:

- Header HDR
- Segment SEG
- Container Summary Record CSM
- Original Container Identification OCI
- Mailer Postage Account MPA (Only the Permit ZIP+4 and CRID of Preparer fields are required)

4.2.5.2 Mixed eDocumentation Copalletization Scenarios

Users are allowed to submit origin files through either form of eDocumentation (Mail.dat and Mail.XML) for a single consolidated mailing to be submitted with consolidators Mail.XML file. One option is all origin files are submitted via Mail.dat and the consolidator submits a Mail.XML file for the consolidated job. Another option is some origin files are submitted via Mail.dat and other origin files are submitted via Mail.XML and the consolidator submits a Mail.XML file for the consolidated job. A consolidator can combine Mail.dat origin containers with Mail.XML origin containers onto the same pallet. In this case, the Consolidators OriginalContainerLinkageCreateRequest message shall reference the origin mailings previously submitted by including the Original Container and Maildat Container blocks, and the Original Container and MailXMLContainer blocks.

4.2.5.3 Internal and External Copalletization

Internal copal is defined as a process where a mailer within a plant is combining multiple mail streams onto pallets for palletization. The Mail.dat Presentation Category of C should be used when mixing physical and logical handling units and containers in the internal copalletization processes.

The third party copal process (also known as external copalletization) is defined as an operation where mail is moving from origin mailer's mailing facility to a consolidator's mailing facility for consolidation. In the third party copal process, letter-based mail is verified at origin and flat-based mailings are verified at the consolidation facilities. Third party copal requires knowing exactly which piece is in which tray or bundle and which tray or bundle is on which pallet. The .hdr Presentation Category of E should be used to identify logical origin mailings tied to logical consolidated copal jobs.

4.2.5.4 FSS within Mixed Class Mailings and Copals

Users are allowed submit FSS lines within Mixed Class co mail mailings and Standard Mail and Periodical Copal mailings beginning in August2014.

For FSS within Mixed Class mailings the following must be populated

- .seg Class Defining Preparation is populated with 6 = Std/Periodicals Co-Mailings
- .csm Container Level is populated with E = FSS Sort Plan and/or F = FSS Facility
- .cqt Destination Entry is populated with P = DFSS
- .pqt Package Level is populated with X = FSS Sort Plan
- .cqt Zone must is populated with W = FSS
- .csm Entry Point For Entry Discount – Facility Type is populated with W = DFSS
- .cqt Rate Category is populated with FS = BPM FSS Scheme and/or FC = BPM FSS Carrier Route

For FSS within Standard Mail Copal Mailings mailings the following must be populated

- .seg Class Defining Preparation is populated with 3 = Standard Mail
- .csm Included in Other Documentation is populated with O = Original Container
- .hdr Mail.dat Presentation Category is populated with P = Conventional Presort, M = MLOCR, C = Consolidated Internal Copal Job with MLOCR and Conventional Presort, or E = Consolidated External Copal Job with MLOCR and Conventional Presort

- .csm Container Level is populated with E = FSS Sort Plan
- .cqt Destination Entry is populated with P = DFSS

For FSS within Periodical Copal Mailings the following must be populated

- .seg Class Defining Preparation is populated with 2 = Periodicals
- .csm Included in Other Documentation is populated with O = Original Container
- .hdr Mail.dat Presentation Category is populated with P = Conventional Presort, M = MLOCR, C = Consolidated Internal Copal Job with MLOCR and Conventional Presort, or E = Consolidated External Copal Job with MLOCR and Conventional Presort
- .csm Container Level is populated with E = FSS Sort Plan and/or F = FSS Facility
- .pqt Package Level is populated with X = FSS Sort Plan
- .cqt Zone is populated with W = FSS
- .csm Entry Point for Entry Discount –Facility Type is populated with W = DFSS

4.2.6 MLOCR Validation Constraints

In addition to the standard file validations, the *PostalOne!* system validates the following for Multi-Line Optical Character Reader/Barcode Sorter (MLOCR/BCS) mailings and fails jobs that do not comply with the following:

- There must be one and only one Segment ID if the Header Mail.dat Presentation category is MLOCR.
- The Barcode Verifier Indicator field in the Segment record is required.
- Class can be First-Class Mail or Standard Mail, but not both.
- Processing Category must be correct. For First-Class Mail, Processing Category must be Letter LT, Card CD, or Flat FL. For Standard Mail, Processing Category must be Letter LT or Flat FL.
- Piece-weight must be correct for the class of mail and category. For example, the *PostalOne!* system verifies weights of 3.3 ounces for First-Class Mail Letters, 13 ounces for First-Class Mail Flats, and 3.3 ounces for Standard Mail Letters for postage meter affixed mailings.
- Precanceled stamps can only be used for 1 ounce First-Class Mail letter pieces and Standard Mail letters.
- For MLOCR mailings:
 - Link logical parent pallets to logical handling units.
 - Link physical sibling handling units to logical handling units (If using the full-service option and if the physical tray is unknown, populate Job ID, Segment ID, Container ID, and Sibling Container ID. Container Type must be T and populate IM Container or Tray Barcode with 24 digits of 9.
 - Link sibling physical containers to logical containers.
- The submitter may not combine in a Mail.dat job Standard Mail presorted price pieces on Standard Mail postage statements together with Single Piece from Standard Mail price pieces on First-Class Mail postage statements.
- The submitter may combine in a Mail.dat job Standard Mail presorted price pieces on Standard Mail postage statements together with Single Piece from Standard Mail price pieces on First-Class Mail postage statements. In this case, mailpieces claim a Single Piece price CQT Rate Category S = Single Piece. The CSM Container Level must be AJ = Single Piece or AN = Single Piece – First Class. For metered or precanceled stamps, the Qualification report shall display the single piece price pieces.
- All MPA files must pass validation. All jobs are rejected if one file fails.
- Updates to MLOCR mailings must limit changes to piece counts, rate categories, container status, presentation category, number of copies, and the parent container reference ID. If the mailing includes changes in any other fields, validation rejects the file.

- Updates to MLOCR mailings must not result in a greater discount due to a rate category change.
- Containers with fewer than 150 pieces must also have a change in rate category that decreases the discount claimed from the original file.
- An MLOCR mailing with Postage Payment Method (MPA) values G = Government, S = Precanceled stamps, C = Metered: Correct, L = Metered: Lowest, or M = Metered: Neither must have one Additional Postage MPA ID in the MPU/C Relationship (MCR) record. Only one account is allowed for additional postage payment for this type of mailing, even if the mailing includes multiple statements.
- When sibling containers are used to identify a logical/physical container relationship in an MLOCR mailing, mailers should comply with the information in the Physical/Logical Trays and Pallets section of the Mail.dat specification.
- An MLOCR mailing cannot include a postage adjustment record (PAR) file.
- When applicable use a new segment record in a single Job ID rather than sending multiple Job IDs. A new segment record will generate a new qualification report but still allow consolidation into the same Master Postage Statement.
- Bundle preparation is supported for First-Class and Standard Mail Flats. Bundles are allowed to be tied to logical trays; bundles in logical trays can only be linked to the physical tray type of Flat Tub.
- First Class and Standard Mail bundles in logical trays are not required to have CQT records if they are linked to logical trays with CQT records via the Supplemental Physical Container ID (The Supplemental Physical Container ID on the logical tray with the .cqt records must contain the linkage).
- The Supplemental Physical Container ID must reference a container of the same level, logical containers must link to logical containers and physical containers must link to physical containers.
- Containers without CQT records are not required to populate .csm Container Gross Weight, .csm Container Gross Weight - Source, .csm Number of Pieces, or .csm Number of Copies when the container is referenced in a Supplemental Physical Container ID by a container with a CQT record.

4.2.7 Mail Anywhere

The Mail Anywhere option allows mailers to pay for postage at a mailing facility other than the mail entry point. Postage is paid via a permit which is not local to the verification facility

4.2.7.1 Mail Anywhere Mailings

A mailing is identified as a Mail Anywhere mailing when the .mpa Payment Account Number and .seg Verification ZIP+4 are populated. When these conditions are met, additional Mail Anywhere validations are run on the eDoc

Mail Anywhere validations;

- Postage statements are finalized at the mailing facility associated to the .seg Verification Facility ZIP+4.
- The .mpa Payment Account Number must be linked to the .mpa Permit Number or .mpa USPS Publication Number.
- A single eDoc may contain Mail Anywhere and non-Mail Anywhere records in a single submission; however the .mpa Permit ZIP+4 of records without .mpa Payment Account Number must match the .seg Verification ZIP+4.
- Periodicals support .mpu Processing Categories of FL = Flats and LT = Letters.

4.2.8 Periodicals Validations

- If the required field Issue date is missing from the CPT record for a Periodicals mailing, the file is rejected with the following error message: For Periodical Statement # (#) Issue Date is required for 3541. If Issue Frequency is missing, the *PostalOne!* system treats the field as blank and continues processing.
- The Flat Machinability field cannot be blank if Mailpiece Unit – Processing Category is FL= Flat Machinability. The Flat Machinability field in the MPU file accepts the value Y for flats machinable under DMM 301.1.3 and the value U for flats machinable under DMM 707.26.
- Determination of prices for Outside-County prices for bundles and containers is described as follows.

- The prices for the Outside County Bundles depend on the Package Quantity - Package Level and the Container Summary - Container Level. For specific mappings, see Section 8,
- The prices for the Outside County Containers depend on the Container Summary fields Container Type, Entry Point for Entry Discount – Facility Type and Container Level. For specific mappings, see Section 8.
- Include a value in the required SEG field Container and Bundle Charge Method as follows.
 - If the mailing does not include any Periodicals Mail, this required field must be filled with a 0 (zero).
 - If this field is set to the value 1 = Charge all to a 3rd party, the SEG file MPA ID for Container and Bundle Charge Method field becomes required. If the field is set to value 1 the third-party statement for parts D and E must be entered manually.
 - Do not use the value 2 = Charge all to one of the publications, the container and bundle charges are not determined correctly. Value 2 will not be supported.
 - If the value is set to 3 = Proportion by copies to each of the publications, the SEG file MPA ID for Container and Bundle Charge Method field is not required.
- If there are multiple segments, validation uses the first Container and Bundle Charge Method for the entire job. This differs from the IDEAlliance Mail.dat specification.
- For postage statements paying the Standard Mail price using Pending Periodicals permits, the field Class Defining Preparation in the SEG file must be 2 = Periodicals and Class must be 5 = Periodicals Pending as applicable in the CPT file and the MPU file. The field Postage Payment Method in the MPA file must be T = Per Pend. The client validator will validate that the field Postage Payment Method in the MPA file must be T = Per Pend. The pending Periodicals permit number must be in the Permit field of the MPA file.
- Pending Periodicals can include firm bundles, First-Class Mail incidental enclosures, non-incidental enclosures, but do not include special authorizations such as nonprofit, science of agriculture, or classroom prices.
- Validation accepts firm bundles for Outside-County Periodicals. For all mailings claiming firm bundles, Package Level of the PQT must be set to A. Pieces must be greater than zero if firm bundles are claimed, but copy number must exceed the piece count. Combinations of firm bundles with enclosures are not supported.
- Periodicals jobs will fail if a Periodicals mailing or an enclosure in a Periodicals mailing claims an unauthorized price category, such as nonprofit, classroom, or science of agriculture.
- Periodicals Loose Addressed Supplements must be associated to a separate MPU which includes a CPT with Mail Class of 2, Rate Type of Z, Ad % Treatment of S. The only other CPT records that may be associated to the MPU are additional Loose Addressed Supplement components, incidental enclosures, ride-alongs or repositionable notes. Loose Addressed Supplements generate a separate child postage statement from their host publication. The child postage statement will be consolidated under the normal business rules. Container or bundle charges are charged for the Loose Addressed Supplements. The Rate Type from the MPU identifies the rates (Regular, Non-Profit, etc.) used for the postage statement. To qualify for full-service, all loose addressed supplements require an associated PDR record. The Copy Count in the CQT records associated to the Loose Addressed Supplements must be greater than or equal to the Piece Count. The Copy Count is not displayed on the postage statement. Addressed supplements may be sent with repositionable notes, ride-alongs, and additional addressed supplement components. The same addressed supplement may be associated with various mailpiece units. A Mail.dat job may contain only addressed supplements.
- The Mail Owner for full-service data distribution cannot be identified through a USPS Publication Number for the Full-service compliance. The Publisher must be identified using a CRID or MID. MPA Mail Owners Lcl Permit Ref Num/ Intl Bill Number if populated must contain a Permit Number not a USPS Publication Number.
- The advertising percentage comes from the Component file and the Ad % Basis is used to compute the advertising percentage of the edition if the advertising percentage is populated on more than one component. The Section 6, Periodicals Procedures contains more details on how to use the Ad % Basis.
- The edition weight worksheet is available for the PS Form 3541 Postage Statement – Periodicals after the Mail.dat file is sent with Container Summary field Container Status with value ready-to-pay. This worksheet is

available on a hyperlink within the postage statement displayed on the dashboard. The worksheet may be updated with the weight per CPT by the postal clerk at the acceptance unit and is available for display by the publisher or mailer. The edition weight used to calculate postage is also displayed on the edition weight worksheet. Some mailers may have arranged to insert the corrected weights into the Mail.dat file update rather than allow the postal clerk to update the edition weight worksheet. There is no method of communicating the need to correct weights to the publisher or mailer. The publisher or mailer must make arrangements with the acceptance office for appropriate communication that the correct weights are updated via Mail.dat and the postage statements are ready for finalization and payment. The edition weights may not be changed after finalization except by reversing the postage statements and resubmitting the Mail.dat job. The edition weight worksheet may be printed or downloaded via Excel (.xls), Comma-Separated Text (.csv), and Portable Document Format (.pdf) formats. The Section 6, Periodicals Procedures contains detailed instructions to display and download the edition weight worksheet.

- The advertising percentage worksheet is available for the PS Form 3541 Postage Statement – Periodicals after the Mail.dat file is sent with Container Summary field Container Status with value ready-to-pay. This worksheet is available on a hyperlink within the postage statement displayed on the dashboard. The worksheet may be updated with the advertising percentage per CPT by the postal clerk at the acceptance unit, or by the publisher or by the mailer, and is available for display by the publisher or mailer. Only components with a Periodical Ad% Treatment value of S will be allowed updates in the Advertising Percentage Worksheet. The edition advertising percentage used to calculate postage is also displayed on the advertising percentage worksheet. Some mailers may have arranged to insert the corrected advertising percentages into the Mail.dat file update rather than update the advertising percentage worksheet. There is no method of communicating the need to correct advertising percentage to the publisher or mailer. The publisher or mailer must make arrangements with the acceptance office for appropriate communication that the correct advertising percentages are updated via Mail.dat and the postage statements are ready for finalization and payment. In the case of a Centralized Periodicals Payment (CPP) publication using the payment request option, the advertising percentages may be changed after finalization and before the payment request is complete. The advertising percentages may not be changed after finalization (or in the case of CPP payment request completion) except by reversing the postage statements and resubmitting the Mail.dat job. The advertising percentage worksheet may be printed or downloaded via Excel (.xls), Comma-Separated Text (.csv), and Portable Document Format (.pdf) formats. Section 6, Periodicals Procedures contains detailed instructions to display and download the advertising percentage worksheet.
- The issue level postage statement report is available in the reports menu. This issue level postage statement combines data from all the PS Forms 3541 Postage Statement – Periodicals from all acceptance offices in the *PostalOne!* system for the selected issue date or issue volume and or issue number. The data is shown in a single issue level postage statement. This postage statement report is useful to many publishers in their accounting systems. The help documentation in the *PostalOne!* system contains detailed instructions on how to display and download the issue level postage statement report.
- The features described above, Ad % Basis edition weight worksheet, advertising percentage worksheet and issue level postage statement, are available for all publications. The payment request feature described in this item is only available to Centralized Periodicals Payment (CPP) publications paying for Periodicals postage in New York by CAPS accounts. CPP publications paying for postage at the CPP Office at the Pricing and Classification Center (PCSC) in New York may not select the full-service option because they do not submit Mail.dat files to the *PostalOne!* System. To receive full-service, these publications must pay for postage at their acceptance offices using Mail.dat files. [eDoc Process A Guide for Centralized Postage Payment \(CPP\) Customers](#) available on RIBBS provides further instructions to pay using Mail.dat files. When using the request payment feature the mailer sets the payment date for the payment request. The full-service reports are not available until after the payment request is paid. If the mailer or publisher does not make the payment request by twenty eight days after the first mailing date found in the payment request the system automatically makes the payment request and debits the CAPS account.
- To configure a Mail.dat file for payment of each Mail.dat job, the mailer shall set the Mailer Postage Account Postage Payment Option to V = PVDS, T = CAPS or C = CPP (if a participant in Centralized Postage Payment for Periodicals).
- To configure a Mail.dat file for the payment request option and pay for all jobs for an issue at the acceptance office up to twenty eight days after the first date of mailing, the postal clerk at the acceptance office must set the

USPS Publication Number to the CPP option. The mailer shall set the Mail.dat Mailer Postage Account Postage Payment Option to C = CPP. The [eDoc Process A Guide for Centralized Postage Payment \(CPP\) Customers](#) on Intelligent Mail Guides & Technical Specifications page of RIBBS contains detailed instructions to perform a Payment Request.

- Comail or Copalletization may not mix CPP paying for postage at the PCSC in New York with other publications paying at the acceptance office in the same ready-to-pay container in the same Mail.dat job. If the CPP publication cannot submit eDoc at the acceptance office, a possible workaround is to put this comail or copalletization data into a separate Mail.dat job. Coordinate with the acceptance office so they may follow special procedures to verify and release this mail.
- The CPT Component Description is an optional field (may be left blank or may have any description convenient to the mailer) and does not determine enclosure type or class. Enclosure type and class is determined by the CPT s Component - Class, Component - Rate Type, and Periodical Ad% Treatment according to the scenario Periodical with First-Class or Standard Mail Enclosure as written in the IDEAlliance Mail.dat Technical Specification available at the [IDEAlliance](#) website. The Component - Rate Type is set to Z for incidental enclosures. For incidental enclosures the Periodical includes the weight of the enclosure. For non-incidental enclosures, the *PostalOne!* system generates the appropriate postage statement for the enclosure: PS Form 3600 Postage Statement – First-Class Mail or PS Form 3602 Postage Statement – Standard Mail.
- The Host Statement Component ID for a ride along or repositionable note will default to the main book, when a ride-along CPT, or repositionable note CPT is in the MPU representing the main book. The Host Statement Component ID for a ride along or repositionable note will default to the addressed supplement, when a ride-along CPT, or repositionable note CPT is in the MPU representing the addressed supplement.
- Government publications may claim In-County pieces for Periodicals postage statements charged to an Official Mail Accounting System (OMAS) account.
- When applicable, to claim the limited circulation discount, use the MPU Mailpiece Unit - Rate Type value Y = Regular Limited Circulation or W = Science of Agriculture Limited Circulation and the same value in CPT Component Rate Type. Limited circulation discount is only applied to mailings with less than 5000 outside county copies per .mpa USPS publication number.
- An Outside County Container Charge is applied for physical containers and physical sibling containers. If the parent container is a physical container, then both the parent and child containers receive the container charge.
- A bundle charge will not be generated for bundles with both In-County and Outside-County pieces when the following requirements are met:
 - Bundles with greater than 6 pieces or bundles are greater than 6 pieces in the Package ZIP Code
 - The .pqt package level is B = Carrier Route, C = 5 – Digit, or U = 5-D Scheme + L007
- For Mail.dat Periodical mailings that include containers with both In-County and Outside-County pieces some container types and levels are exempt from container charges for mixed Periodicals.
 - Container Types exempt: O = 1 ft. Tray, T = 2 ft. Tray, E = EMM Tray, S = Sack (general), P = Pallet, V = Sack (virtual), 1 = #1 Sack, 2 = #2 Sack, 3 = #3 Sack, 4 = 01V Sack, M = Logical Pallet (MLOCR), Z = User Pallet, F = Flat Tub
 - Container Levels exempt: A = CR-Direct, B = Mixed CR in 5-Digit Scheme, G = 5 – Digit (Auto/Presort), H = 5-Digit (Merged), I = 5-Digit (Presort only), J = 5-Digit (Barcode Only), M = 5-Digit Scheme (Presort), N = 5-Digit Scheme (Auto, Presort), P = 5-Digit Scheme (Barcode), Q = 5-Digit Scheme (Merged)
- Periodical publications claiming In-County prices will be exempt from FSS presort.

4.2.8.1 Air Box Constraints

- Container type of AB = Air Box is supported for Periodicals and Pending Periodicals.
- Only Full-Service and Mixed Full-Service submissions are eligible to use container types of Air Box.

- Air Box containers must have the .seg Logical/Physical Container Indicator populated with P = Physical Container. Logical Mailings for Periodical Air Boxes are not allowed because they require the weight of the siblings.
- Each Air Box container may only have a single sibling container.
- Sibling Air Box containers do not require the .csm Total Weight field to be populated.
- Sibling containers will be charged as a sack regardless if the .csm Total Weight is provided for the sibling on container types of Air Box.
- Air Boxes will be charged Sack or Pallet rates depending on the .csm Total Weight.
 - Air Boxes will be considered Sacks if they weigh 70 pounds or less.
 - Air Boxes will be considered Pallets if they weigh more than 70 pounds
 - PostalOne! will validate sortation for an Air Box as a pallet according to the following:

Note: Sack preparation is not allowed.

- Carrier route, required at 70 lbs.
- Carrier route, optional at 20 lbs or above.
- 5-digit scheme carrier routes, required at 70 lbs.
- 5-digit scheme carrier routes, optional at 20 lbs or above
- 5-digit carrier routes, required at 70 lbs.
- 5-digit carrier routes, optional at 20 lbs or above
- 3-digit carrier routes, required at 70 lbs.
- 3-digit carrier routes, optional at 20 lbs or above
- 5-digit scheme, required at 70 lbs.
- 5-digit scheme, optional at 20 lbs or above
- 5-digit, required at 70 lbs.
- 5-digit, optional at 20 lbs or above
- 3-digit, required at 70 lbs.
- 3-digit, optional at 20 lbs or above
- SCF, required at 70 lbs.
- SCF, optional at 20 lbs or above
- ADC, required at 70 lbs.
- ADC, optional at 20 lbs or above.
- Origin mixed ADC, required, no minimum
- Mixed ADC, required, no minimum

4.2.8.2 Periodicals Pricing for Letters

Letters map to Periodicals postage statement lines as follows in this table.

- The .seg Class Defining Preparation has value 2 = Periodicals.
- The .seg Principal Processing Category has value LT = Letters.
- The Version Weight calculated from component weights must be less than 16 oz.

Section	.cqt Periodicals Not County / In County	.cqt Rate Category	.csm Container Level	.pqt Package Level
Part A In-County Non-Automation Letter Piece Prices	I = In-County	G = 5-Digit Non Barcode K = 3-Digit Non Barcode N = Basic Presort D = Carrier Route	N/A	N/A
Part C Outside-County Non-Automation Letter Piece Prices	N = Outside-County	G = 5-Digit Non Barcode K = 3-Digit Non Barcode N = Basic Presort D = Carrier Route	N/A	N/A
Part C Outside-County Firm Bundle Letter Piece Prices	N = Outside-County	FB = Firm Bundles	N/A	N/A
Part D Outside-County Firm Bundle Letter Bundle Prices	N = Outside-County	N/A	As mapped in the Postal Service Mail.dat Technical Specification Table C- 13. Container Level Values	A = Firm Bundle

Table 4-4 Periodicals Pricing for Letters

4.2.8.3 Combined Mail of Periodicals with Standard Mail Flats

The *PostalOne!* system will support Mail.dat submission for combined mail of Periodicals with Standard Mail flats according to the final rule published in the Federal Register June 28, 2011 and available at [Combined Mailings of Standard Mail and Periodicals Flats](#).

The HDR Conventional Presort value is P = Conventional Presort, SEG Class Defining Preparation value is 6 = Std/Periodicals Comailings, SEG Principal Processing Category value is FL = Flat, SEG Logical/Physical Container Indicator value is P = Physical Container, and SEG Log/Phy Package Indicator value is P = Physical Package.

For a Standard Mail mailpiece MPA Permit Number and associated data is required. The MPU Mailpiece Unit – Weight field must qualify as a Standard Mail flat and not exceed 16 oz.

For a Periodicals mailpiece, the MPA USPS Publication Number or the pending Periodicals MPA Permit Number and associated data is required.

The MPU Flat Machinability must be Y = Machinable on ASFM 100 and the Periodicals version weight must not exceed 22 oz.

The CPT Component Weights must be provided for the Periodicals mailpiece for the system to calculate the version weight. The CPT Component-Periodical Ad Percentage and Component - Periodical Ad Percentage: Status must be provided for the system to calculate the advertising pounds. The CPT Component file field Periodical Ad% Treatment must be populated for components that are part of a Periodicals mailpiece. The optional CPT field Ad % Basis is available to describe the advertising pounds for a Periodicals mailpiece. The CPT field Periodical Issue Date must be populated for the host component in the Periodicals mailpiece.

The MPU Mailpiece Unit – Class value is 2 = Periodicals or 3 = Standard Mail or 5 = Per Pending.

The CPT Component – Class must be 1 = First-Class, 2 = Periodicals, 3 = Std Mail, or 5 = Per Pending.

Note: A Periodicals host component may have either or both First-Class component(s) and Standard Mail component(s) for enclosures in the same mailpiece.

The MPU Mailpiece Unit - Rate Type is R = Regular (US/MEX/CAN) or N = Nonprofit for Standard Mailpieces or is R = Regular (US/MEX/CAN), N = Nonprofit, S = Science of Agriculture, C = Classroom, W = Science of Agriculture Limited Circulation, or Y = Regular Limited Circulation for Periodicals mailpieces. The MPU Mailpiece Unit – Processing Category

is value FL = Flat. The MPU Surcharge field is N = Not Oversized. The MPU Postage Affixed Type is blank. The Component file field Component - Rate Type must be R = Regular (US/MEX/CAN) or N = Nonprofit, M = Repositionable Component, or Z - Included, part of host postage for Standard Mailpieces. The Component file field Component - Rate Type must be R = Regular (US/MEX/CAN), N = Nonprofit, S = Science of Agriculture, C = Classroom, W = Science of Agriculture Limited Circulation, Y = Regular Limited Circulation, H = Per Ride-Along, Z - Included, part of host postage, or M = Repositionable Component for Periodicals mailpieces. The CPT Component-Processing Category must be FL = Flat, but could be FL = Flat, LT = Letter or CD = Card for enclosures on either a Standard Mailpiece or a Periodicals mailpiece.

The MPA File field Postage Payment Option accepts values C = CPP or T = CAPS or D = Debit for a Periodicals mailpiece; T = CAPS or D = Debit for a Standard Mail mailpiece; and D = Debit for a pending Periodicals mailpiece. The Mail.dat Job may contain any combination of allowed Postage Payment Methods.

The MPA File field Postage Payment Method (140) must be P = Permit, T = Per Pend (using Permit), or G = Govt – Fed (use Permit).

Each Job ID must contain at least 200 pieces or 50 pounds of Standard Mail.

For any container having Outside County Periodicals mailpieces to support container and bundle charges: the CSM file field Container Type must be mapped in the Table Container Type Values; the CSM file field Container Level must be mapped in the Table Container Level Values, CSM file field Entry Point for Entry Discount - Facility Type must be mapped in the table Entry Point for Entry Discount - Facility Type Values. Facility types DDU and ADC are not allowed for this comail. The PQT file Package Level for a Periodicals mailpiece must be one of the values mapped in the Table Package Level values. (These table references are to the *PostalOne!* Mail.dat Technical Specification and have specific entries for mixed class comail.) The system shall validate that if the PQT file Package Level is A = firm then the bundle may contain only Periodicals flats.

For Periodicals bundle charges, there may be an ADC bundle containing mixed ADCs assigned to that NDC. This bundle will be charged the ADC bundle level price on line D6. For Periodicals container charges there may not be sacks or trays so lines E1 through E24 are not allowed. For Periodicals container charges, pallets may not be origin entry so lines E27, E29, E33, E35, E40, will not be allowed. For Periodicals container charges, destination ADC entry is not allowed so lines E31, E37 and E44 are not allowed. For Periodicals container charges, DDU entry is not allowed so line E46 is not allowed.

For the CQT file field Container Charge Allocation, the system shall ignore the value in this field and if there are multiple titles and/or issues apportion the container and bundle charges.

For a Periodicals mailpiece, the CQT file field Rate Category must be a value mapped for Periodicals flats; for a Standard Mail mailpiece, the CQT file Rate Category must be a value mapped for Standard Mail flats.

The CQT file field Periodicals: Sub/Non-Sub/Requester Indicator must be S = Sub, N = Non-Sub, R = Requester for a Periodicals or Pending Periodicals mailpiece and O = Other for a Standard Mail mailpiece. The CQT file field Periodicals: Not County/In County must be N = Not County I = In-County for a Periodicals or Pending Periodicals mailpiece and O = Other for a Standard Mail mailpiece.

For flats, the CQT file field Barcode Discount Or Surcharge Indicator must be O = Other.

An Outside County Container Charge is applied for physical containers and physical sibling containers, only on the periodical statement. If the parent container is a physical container, then both the parent and child containers receive the container charge.

Allow Non-full-service for Combined Mail of Periodicals with Standard Mail Flats

The system shall allow mixed class Standard Mail carrier route flats and calculate correct postage on the following Part F carrier route flats lines (excluding Saturation CR, entry DDU and detached address labels): F2, F3, F4, F5, F7, F8, F9, F10, F12, F13, F14, F15, F29, F30, F31, F32, F34, F35, F36, F37, F39, F40, F41, F42.

The system shall consider a mailing to be mixed Full-Service when the SEG Full-Service Participation Indicator is M = Mixed.

For mixed Full-Service combined mailing, the Periodicals, Pending Periodicals, or Standard Mail Full-Service pieces shall be accepted in PDR or PBC (Mail.dat_12) and be forwarded to SASP for further processing.

The system shall consider a mailing to not be Full-Service when the SEG Full-Service Participation Indicator is blank.

The system will not accept or forward piece level information to SASP for mailpieces that are not Full-Service.

Spoilage is not allowed in Mail.dat on Standard Mail regular prices or Standard Mail nonprofit prices in mixed class.

Note: Spoilage may be claimed with the refund PS Form 3533.

Copalletization for Combined Mail of Periodicals with Standard Mail Flats

Mailers may use the OCI file to copalletize both Standard Mail and Periodicals Mail in a single copalletized mailing.

For a mixed mailing the OCI file Container ID and Job ID container may contain Standard Mail or Periodicals Mail or a mixture of Periodicals Mail and Standard Mail.

For a mixed class mailing, the OCI file Original Container ID and Original Job ID container may contain Standard Mail or Periodicals Mail or a mixture of Periodicals Mail and Standard Mail.

The original Container report shall accommodate both Standard Mail and Periodicals Mail in the same report

Periodicals Pricing for Combined Mail of Periodicals with Standard Mail Flats

The system shall consider a mailing to be eligible for Periodicals MADC pricing when the combined mailing has CSM Container Level AG = Mixed, NDC and the CSM Entry Point for Entry Discount - Facility Type is O = Origin, C = Origin SCF, E = Origin DU, K = Origin NDC, L = Origin ASF. Other origins will provide error message.

The system shall use the Entry ADC line for the CSM Entry Point for Entry Discount - Facility Type is B = DNDC.

For Mixed class, accept CQT Zone 1-8 for Outside-County mail.

For Mixed class accept CQT Zone 1-8 for In-County.

For CSM Container Level Y = Protected SCF, map the same as SCF Container Level. For AF = Protected NDC, map the same as NDC Container Level.

Optional origin entry is allowed at all pallet levels for Mixed Class Comail

After the Mail.dat file is submitted, the *PostalOne!* system produces postage statements for Standard Mail and Periodicals mail at all origin locations except OADC.

Bundle charges will be apportioned according to the ratio of the Periodicals copies in the bundle to the total copies in the bundle.

Container charges will be apportioned according to the ratio of the weight of Periodicals in the container to the total weight of mail in the container.

4.2.9 Full-service

Full-service provides the Mailers with the option to receive information on the following services: Start-the-Clock, Container Visibility, Address Correction (ACS), Change of Address (COA), ACS Nixie, Performance Based Verification (PBV) Full-Service Compliance Results, eDoc Mail Quality Results, and Confirm[®].

4.2.9.1 Full-service Data Distribution

The dissemination of the data is referred to as full-service Data Distribution. The recipients for the Data Distribution are determined according to the By/For relationship defined in the Mail.dat file submission. If there is a failure of the full-service Data Distribution for Mail.dat files and if the Postal Service decides to use OneCode ACS for the contingency plan, the Address Correction (ACS) Change of Address (COA) and the ACS Nixie shall be provided to the Mailer ID on the affected mailpieces and the Data Distribution designated in the Mail.dat file is ignored.

Submitting the By/For Information

There is one method for submitting the By/For information for Data Distribution. The selection of the appropriate method is determined by the Mail.dat file used to submit the piece information in Mail.dat. The Piece Detail Record (PDR) is the only method available.

Option for Piece Detail Record: If the mailer is submitting the piece information using the PDR Record, the following options can be used for identifying the By/For:

Option A: Component Record and MPU/C Relationship Record

In Component (CPT) record, the Mail Owner can be identified by either a Mailer ID of Mail Owner or a CRID of Mail Owner (only one of the fields needs to be populated, if both are populated, the order of preference is indicated in Table 4-5). In either case, when using the Component record to provide owner identification, the Host Statement Component ID in the MCR must be populated with the Component ID from the host component record. The Host Statement Component ID in the MCR must always be populated even if it is the same as the Component ID in the MPU/C Relationship Record (self-referential).

The PDR record identifies the CQT Database ID and the CQT record identifies the Mailpiece Unit MPU record. The MPU/C Relationship Record (MCR) record for this MPU record where the Component ID is the same as the Host Component ID references the MCR - Primary MPA ID. The *PostalOne!* System finds the MPA - Unique Sequence/Grouping ID that matches the MCR - Primary MPA ID and uses this MPA to find the either a Mailer ID of Preparer or CRID of Preparer (only one of the fields needs to be populated, if both are populated, the order of preference is indicated in the table below).

Mail.dat File	Mail.dat Field name	Identifies	Order of Preference
CPT	Mailer ID of Mail Owner	Owner	First
MPA	Mailer ID of Mail Owner	Owner	Second
CPT	CRID of Mail Owner	Owner	Third
MPA	CRID of Mail Owner	Owner	Fourth
MPA	Mail Owners Lcl Permit Ref Num / Intl Bill Num	Owner	Fifth
MPA	USPS Publication Number (applicable only for Periodicals)	Owner	Sixth
MPA	Mailer ID of Preparer	Preparer	First
MPA	CRID of Preparer	Preparer	Second
MCR	Host Statement CPT ID	Host CPT for MPA record	Required

Table 4-5 Data Distribution Fields (PDR with CPT and MCR)

Option B: Mail Postage Account Record (MPA)

In MPA, Mail Owner can be identified by one of Mailer ID of Mail Owner, CRID of Mail Owner, or Mail Owners Lcl Permit Ref Num/Intl Bill Num. The USPS Publication Number can be used to identify the Mail Owner. (Only one of the fields needs to be populated, if more are populated, the order of preference is indicated in Table 4-6). For Nonprofit Standard Mail, the Mail Owners Lcl Permit Ref Num/Intl Bill Num must be populated with the mail owners permit that is authorized for Nonprofit Standard Mail. USPS Publication Number is only used to identify a Mail Owner for Periodicals mailings.

In MPA record, the Mail Preparer can be identified by either a Mailer ID of Preparer or a CRID of Preparer. (Only one of the fields needs to be populated, if both are populated, the order of preference is indicated in Table 4-6).

Mail.dat File	Mail.dat Field name	Identifies	Order of Preference
MPA	Mailer ID of Mail Owner	Owner	First
MPA	CRID of Mail Owner	Owner	Second
MPA	Mail Owners Lcl Permit Ref Num / Intl Bill Num	Owner	Third
MPA	USPS Publication Number, only for Periodicals Mail)	Owner	Fourth
MPA	Mailer ID of Preparer	Preparer	First
MPA	CRID of Preparer	Preparer	Second

Table 4-6 Data Distribution Fields (PDR with MPA)

By/For Verification

A By/For Verification process occurs during eDoc processing of full-service Mail.dat files. By/For Verification validates that the Mail Preparer (By) and Mail Owner (For) identifiers specified in the eDoc are internally consistent and valid. The Mail Owner determined during By/For Verification is used to confirm the correct profile to be used for Data Distribution.

The result of By/For Verification determines the data recipients for the Data Distribution. The following reference data is used to determine valid By/For:

- The CRID must be valid in Customer Registration.

- The CRID must be associated to the Mailer ID in the Mailer ID system.
- The Permit (Mail Owners Lcl Permit Ref Num/Intl Bill Num from MPA) must be associated to the CRID in the *PostalOne!* System and must be within the same finance number of the Permit and Permit ZIP+4 in the MPA.
- The Publication Number (USPS Publication Number from MPA) must be associated to the CRID in the *PostalOne!* System and must be within the same finance number of the Publication Number and Permit ZIP+4 in the MPA.

The By/For is invalid if there is a conflict between the Mail Owner and Mail Preparer fields within a Mail.dat, identified during By/For Verification. These discrepancies during eDoc processing are returned to the *PostalOne!* system as By/For Conflict messages. A By/ For Conflict message is provided for notification only. It does not prevent mailers from receiving feedback on ACS, Start-the-Clock, Container Visibility, PBV Full-Service Compliance Results, and Confirm. Below the rules for Mail Owner Conflict and Mail Preparer Conflict are described.

Mail Owner CRID Conflict with Piece Detail Record

To avoid CRID conflict, when applicable the following items found using the CQT DB ID in the PDR must match.

- CRID of Mail Owner from MPA
- CRID of Mail Owner from CPT
- CRID of Mailer ID for the Mail Owner in MPA
- CRID of the Mailer ID for the Mail Owner in CPT
- CRID of the Permit (Mail Owners Lcl Permit Ref Num/Intl Bill Num) for Mail Owner in the MPA
- If Periodicals Mail, CRID of the Publication Number for Mail Owner in the MPA

Mail Owner Mailer ID Conflict

Mailer ID of Mail Owner from MPA must match Mailer ID of Mail Owner from CPT.

Mail Preparer CRID Conflict with Piece Detail Record

CRID of Preparer from MPA must match Mailer ID of Preparer from MPA.

Note: The Mail Owner MID and Mail Owner CRID can be used for Full-Service data distribution, but is not used to identify the mail owner on the postage statement.

4.2.9.2 Full-Service, Mixed Full-Service, Basic, and POSTNET Mailings

The *PostalOne!* system supports the mixture of full-service, basic service, and POSTNET mailpieces in a bundle, sack, or tray for a single mailing. Validation processes such mixed mailings and requires the following fields and values as well as the Piece Detail Record (PDR) file:

File	Field Name	Acceptable Values
Header (HDR)	Mail.dat Presentation Category	M, P, N,C, E
Segment (SEG)	Full-service Participation Indicator	F, M
Segment (SEG)	Class Defining Preparation	1, 2, 3, 4
Mailpiece Unit (MPU)	Mailpiece Unit – Rate Type	First-Class Mail: R
Periodicals: R, N, S, C, W, Y		
Standard Mail: R,N		
Package Services: B		
Mailpiece Unit (MPU)	Mail Piece Unit – Processing Category	LT, FL, CD
Mail Piece Unit (MPU)	Country	US
Mailer Payment Account (MPA)	Postage Payment Method	P, S, L, C, M, T
Component (CPT)	Component – Class	1, 2, 3, 4, 5
Component (CPT)	Component – Rate Type	R, N, S, C, B, T, L, F, B, E, G, J, K, W, Y, Z* ()
Container Quantity (CQT)	Service Level Indicator	F, B, P, O

Table 4-8 Required Field Values for Full-Service

Note: For mixed mailings, at least one CQT record must use F.

4.2.10 Flats Sequencing System (FSS) Preparation

The *PostalOne!* system shall support FSS preparation for Mail.dat jobs with SEG Principal Processing Category value FL = Flats, MPU Mail Piece Unit – Class values 2 – Periodicals, 3 – Standard Mail, and 4 - Package Services: Bound Printed Matter, CSM Container Type value equivalent to pallet or sack, PQT Package Level value X = FSS and CSM Container Levels values E = FSS Sort Plan and F = FSS Facility. For Periodicals mail class, CSM Entry Point for Entry Discount - Facility Type must be K = Origin NDC, J = Origin ADC, C = Origin SCF, O = Origin Post Office/DMU, B = DNDC, R = DADC, S = DSCF, and W = DFSS. For complete mappings of all lines see Section 8.3 Mail.dat Postage Statement Mappings.

The PostalOne! system will utilize the CQT Rate Category of FS – FSS Scheme (Sort Plan) and FC = BPM FSS Carrier Route for Bound Printed Matter mailings (3605). The CQT Rate Categories of FF – FSS Facility, FN – FSS Scheme Non-Barcode were added to the Mail.dat specification version 14-1; however, these two Rate Categories are no longer in use and they are Reserved as future placeholders values.

Beginning in August 2014 the PostalOne! system will support FSS within Mixed Class co mail mailings and Standard Mail and Periodical Copals. For more information see Section 4.2.5.3 FSS within Mixed Class and Copals.

4.2.10.1 FSS Preparation - Periodicals

The *PostalOne!* system will support bundle and container prices for Outside County Periodicals prepared as FSS and mapped to Periodicals postage statement lines as follows for all applicable sack, tray and pallet types per the current mapping.

For Table 4-9 SEG Class Defining Preparation has value 2 = Periodicals, SEG Principal Processing Category has value FL = Flats, and CQT Periodicals Not County/In County has value N = Outside County, CSM Entry Point for Entry Discount – Facility Type values K = Origin NDC, J = Origin ADC, C = Origin SCF, O = Origin Post Office/DMU, B = DNDC, R = DADC, S = DSCF, W = DFSS and PQT Package Level has a value of X = FSS.

Section	3541 Statement Line	.csm Entry Point for Entry Discount - Facility Type	.csm Container Level
Part B Advertising Pound Prices	B2	W = DFSS	
Part B Nonadvertising Pound Prices	B15	W = DFSS	
Part C Outside County Piece Prices	C7	Note: Piece Prices for FSS will be charged according to the rate categories for valid lines in Part C.	
Part C Outside County Piece Prices	C10	Note: Piece Prices for FSS will be charged according to the rate categories for valid lines in Part C.	
Part D Outside County Bundle Prices	D4		AB = Mixed ADC
Part D Outside County Bundle Prices	D10		Z = ADC
Part D Outside County Bundle Prices	D15		X = SCF
Part D Outside County Bundle Prices	D19		F = FSS Facility
Part D Outside County Bundle Prices	D20		E = FSS Sort Plan
Part E Outside County Container Prices	E18	K = Origin NDC	F = FSS Facility
Part E Outside County Container Prices	E19	J = Origin ADC	F = FSS Facility

Section	3541 Statement Line	.csm Entry Point for Entry Discount - Facility Type	.csm Container Level
Part E Outside County Container Prices	E20	C = Origin SCF	F = FSS Facility
Part E Outside County Container Prices	E21	O = Origin Post Office/DMU	F = FSS Facility
Part E Outside County Container Prices	E22	B = DNDC	F = FSS Facility
Part E Outside County Container Prices	E23	R = DADC	F = FSS Facility
Part E Outside County Container Prices	E25	S = DSCF	F = FSS Facility
Part E Outside County Container Prices	E26	K = Origin NDC	E = FSS Sort Plan
Part E Outside County Container Prices	E27	J = Origin ADC	E = FSS Sort Plan
Part E Outside County Container Prices	E28	C = Origin SCF	E = FSS Sort Plan
Part E Outside County Container Prices	E29	O = Origin Post Office/DMU	E = FSS Sort Plan
Part E Outside County Container Prices	E30	B = DNDC	E = FSS Sort Plan
Part E Outside County Container Prices	E31	R = DADC	E = FSS Sort Plan
Part E Outside County Container Prices	E33	S = DSCF	E = FSS Sort Plan
Part E Outside County Pallet Prices	E60	K = Origin NDC	F = FSS Facility
Part E Outside County Pallet Prices	E61	J = Origin ADC	F = FSS Facility
Part E Outside County Pallet Prices	E62	C = Origin SCF	F = FSS Facility
Part E Outside County Pallet Prices	E63	O = Origin Post Office/DMU	F = FSS Facility
Part E Outside County Pallet Prices	E64	B = DNDC	F = FSS Facility
Part E Outside County Pallet Prices	E65	R = DADC	F = FSS Facility
Part E Outside County Pallet Prices	E67	S = DSCF	F = FSS Facility

Section	3541 Statement Line	.csm Entry Point for Entry Discount - Facility Type	.csm Container Level
Part E Outside County Pallet Prices	E68	K = Origin NDC	E = FSS Sort Plan
Part E Outside County Pallet Prices	E69	J = Origin ADC	E = FSS Sort Plan
Part E Outside County Pallet Prices	E70	C = Origin SCF	E = FSS Sort Plan
Part E Outside County Pallet Prices	E71	O = Origin Post Office/DMU	E = FSS Sort Plan
Part E Outside County Pallet Prices	E72	B = DNDC	E = FSS Sort Plan
Part E Outside County Pallet Prices	E73	R = DADC	E = FSS Sort Plan
Part E Outside County Pallet Prices	E74	W = DFSS	E = FSS Sort Plan
Part E Outside County Pallet Prices	E75	S = DSCF	E = FSS Sort Plan

Table 4-9 Periodicals Pricing for FSS Preparation

4.2.10.2 FSS Preparation – Standard Mail

The *PostalOne!* system will support FSS Preparation for Standard Mail mailings. For Table 4-10, SEG Class Defining Preparation has value of 3 = Standard Mail, SEG Principal Processing Category has value of FL = Flats, .cqt Rate Category has a value of E, C, B, or D, and .csm Container Level has a value of E. FSS Preparation for automation flats will be mapped to the following lines on the Standard Mail postage statement:

Section	3602 Statement Line	.cqt Destination Entry	.cqt Rate Category	.csm Container Level
Part D Automation Fats 3.3 oz or less	D12	P = DFSS	E = 5-Digit Barcode	E = FSS Sort Plan
Part D Automation Fats 3.3 oz but less than 16 oz	D27	P = DFSS	E = 5-Digit Barcode	E = FSS Sort Plan
Part E NonAutomation Flats 3.3 oz or less	E12	P = DFSS	G = 5-Digit	E = FSS Sort Plan
Part E NonAutomation Flats 3.3 oz but less than 16 oz.	E27	P = DFSS	G = 5-Digit	E = FSS Sort Plan
Part F Carrier Route Flats 3.3 oz or less	F13	P = DFSS	C = High Density Plus – ECR	E = FSS Sort Plan
Part F Carrier Route Flats 3.3 oz or less	F15	P = DFSS	B = High Density - ECR	E = FSS Sort Plan
Part F Carrier Route Flats 3.3 oz or less	F17	P = DFSS	D = Carrier Route	E = FSS Sort Plan

Part F Carrier Route Flats Over 3.3 oz but less than 16 oz	F53	P = DFSS	C =High Density Plus - ECR	E = FSS Sort Plan
Part F Carrier Route Flats Over 3.3 oz but less than 16 oz	F55	P = DFSS	B =High Density - ECRS	E = FSS Sort Plan
Part F Carrier Route Flats Over 3.3 oz but less than 16 oz	F57	P = DFSS	D = Carrier Route	E = FSS Sort Plan

Table 4-10 Standard Mail Pricing for FSS Preparation

4.2.10.3 FSS Preparation – Package Services

The *PostalOne!* system will support FSS Package Services mailings. For Table 4-11, the SEG Class Defining Preparation has value of 4 = Package Services, SEG Principal Processing Category has value of FL = Flats, MPU Mail Piece Unit – Rate Type value B = Bound Printed Matter, and .cqt Rate Category has a value of FC = BPM FSS Carrier Route and FS = BPM FSS Scheme. FSS Preparation for presorted Bound Printed Matter will map to the following lines on the Package Services postage statement:

Section	3605 Statement Line	.cqt Rate Category	.cqt Destination Entry
Part A FSS Carrier Route Flats	A23	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A24	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A25	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A26	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A27	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A28	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A29	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A30	FC = BPM FSS Carrier Route	N = None
Part A FSS Carrier Route Flats	A31	FC = BPM FSS Carrier Route	B = DNDC
Part A FSS Carrier Route Flats	A32	FC = BPM FSS Carrier Route	B = DNDC
Part A FSS Carrier Route Flats	A33	FC = BPM FSS Carrier Route	B = DNDC
Part A FSS Carrier Route Flats	A34	FC = BPM FSS Carrier Route	B = DNDC
Part A FSS Carrier Route Flats	A35	FC = BPM FSS Carrier Route	S = DSCF
Part A FSS Carrier Route Flats	A36	FC = BPM FSS Carrier Route	P = DFSS
Part A FSS Carrier Route Flats	A37	FC = BPM FSS Carrier Route	D = DDU
Part A Presorted and FSS Presorted Flats	A60	FS = BPM FSS Scheme	N = None

Section	3605 Statement Line	.cqt Rate Category	.cqt Destination Entry
Part A Presorted and FSS Presorted Flats	A61	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A62	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A63	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A64	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A65	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A66	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A67	FS = BPM FSS Scheme	N = None
Part A Presorted and FSS Presorted Flats	A72	FS = BPM FSS Scheme	B = DNDC
Part A Presorted and FSS Presorted Flats	A73	FS = BPM FSS Scheme	B = DNDC
Part A Presorted and FSS Presorted Flats	A74	FS = BPM FSS Scheme	B = DNDC
Part A Presorted and FSS Presorted Flats	A75	FS = BPM FSS Scheme	B = DNDC
Part A Presorted and FSS Presorted Flats	A76	FS = BPM FSS Scheme	P = DFSS
Part A Presorted and FSS Presorted Flats	A78	FS = BPM FSS Scheme	S = DSCF
Part A Presorted and FSS Presorted Flats	A80	FS = BPM FSS Scheme	D = DDU

Table 4-11 Package Services Pricing for FSS Preparation

4.2.11 Unsupported Mailing Cases

The following mailing cases are not supported using Mail.dat files:

- Copalletized mailings where a segment contains only mother containers.
- International mail. INDC (Entry Point for Entry Discount – Facility Type of I) is not supported for any mail class.
- Pending Periodicals with parcels prices (including 16-20 ounce flats) do not have postage calculated from the PS Form 3605, the postal clerk shall enter this value using the postage statement provided by the mailer.

- Periodicals parcels that are not bundled. If Periodicals parcels are not bundled, even irregular parcels, validation rejects the Mail.dat file. To submit Periodicals parcels that are not bundled per DMM section 707.23.4, submit the mailing with the alternative standardized documentation and postage statements.
- Only two-pass MLOCR mailings yield valid results. One-pass mailings produce inaccurate reports and postage. Workaround: Use two-pass MLOCR. For two-pass MLOCR mailings the ZIP Destination report is not accurate. Workaround: Mailers must provide this report by alternative means.
- Bound Printed Matter with copies greater than pieces. Workaround: Selective binding of multiple copies is supported if copies are equal to pieces and a new MPU record is created for each unique weight or unique combination of a particular number of copies.
- For Postage Statements submitted via Mail.dat, the full-service discount on the non-incidental enclosure when applicable is not supported at this time. Non-incidental enclosures are eligible for the full-service discount when enclosed in host mailpieces that receive full-service discount and are letters or machinable flats. For Periodicals flats must have MPU Flat Machinable = Y for the non-incidental enclosure to receive a full-service discount. Request a refund of the amount of this postage by the usual manual process, PS Form 3533 Application for Refund.
- Spoilage or Shortage using a .pdr, .pbc, or .par file for Periodicals, Standard /Periodical Co-Mailings, Package Services Parcels (Non Machinable, Machinable, Irregular) or Priority Mail. A refund request using PS Form 3533 must be used.

The above list is not exhaustive; the IDEAlliance Mail.dat specification may support additional cases that are not supported by the *PostalOne!* system.

4.2.12 Simple Mailing Constraints

Mailings are considered Simple Mailings, when Mail.dat files include the following criteria:

- The mailing is Full-Service.
- The total number of pieces from all Container Quantity records is less than 10,000.
- IM Barcode in the Piece Detail Record and the Barcode in the Piece Barcode Record are optional fields. However, the Mailer ID and Serial Number portions must be the same throughout the entire mailing, when populated.

4.2.13 Shipping Services File Generation

The PostalOne! system will create a Shipping Services File (SSF) to provide data to the Product Tracking System (PTS) for piece tracking, when the following criteria is met.

- The .pdr IM™ Barcode field is populated with an IMpb in all Piece Detail records.
- Piece Barcode records in the, .pdr file are 5, 9, or 11 digits in length, Address records in the .upa file, or .sfr Service Type populated with NP for the corresponding .pdr Piece ID is populated for all pieces.
- Mailer ID of Preparer is populated with a valid value in the .mpa record.
- .mpu Class, .mpu Processing Category, .mpu Rate Type, and .hdr Mail.dat Presentation Category fields are populated with acceptable values.

The Shipping Services File will be generated upon eDoc upload prior to finalization for each distinct set of the Mail.dat fields of .csm Postage Statement Mailing Date, .csm Postage Statement Mailing Time, .csm Entry Point for Entry Discount – Facility Type, .csm Entry Point for Entry Discount – Postal Code and .mpa Mailer ID of Preparer.

The SSF Transaction ID in the shipping services file (position 78-89) is displayed on the postage statement header. This field is used to correlate eDocs to SSF transactions.

For more information about Shipping Services File please refer to Section 3 of [Publication 199](#) .

The table below shows SSF Acceptable Value based on Postage Statement Form.

PS Form	.mpu Class	.mpu Processing Category	.mpu Rate Type	.hdr Mail.dat Presentation Category
Priority Mail 3600	1 = First Class	FL = Flats LT = Letters PF = Parcels, First Class		N = Single Piece
First Class 3600	1 = First Class	PF = Parcels, First Class	R = Regular	
Standard Mail 3602 R/N	3 = Standard Mail	IR = Irregular Parcels MP = Machinable Parcels	R = Regular N = Non-Profit	
Package Services 3605	4 = Package Services	IR = Irregular Parcels MP = Machinable Parcels	B = Bound Printed Matter D = Parcel Select P = Parcel Post L = Library Mail F = Media Mail	

Table 4-13 SSF Acceptable Values

The table below lists by release the class of mail that will generate a Shipping Services File (SSF).

Mail.dat Conversion to Shipping Services Files			
Release Date/Class of Mail	October 2013	April 2014	August 2014
BPM	Yes		
Priority Mail		Yes	
Parcel Select			Yes
Parcel Post			Yes
Standard Mail			Yes
First Class			Yes
Media Mail/Library Mail			Yes

Table 4-14 Mail.dat Support SSF

The table below translates the values from the Mail.dat file that will be used to create the Header Record (H1) fields EFN and Record Count for the Shipping Services File. The dynamic fields uniquely identify each Shipping Services File in a valid barcode construct of C09 or C10.

Shipping Services Electronic File Name Dynamic Fields				
Channel Application Identifier	STC	MID of Preparer	Serial	Check Digit

Shipping Services Electronic File Name Dynamic Fields				
Variable based.mpa MID of Preparer length: .mpa MID of Preparer 6 digits Channel Application Identifier = 93 .mpa MID of Preparer 9 digits Channel Application Identifier = 92	750 (driven from code_value)	.mpa MID of Preparer	ssf_seq_id (oracle generated sequence) and zero padded based on mpa MID of Preparer 6 digits, Serial Number = 14 digits .mpa MID of Preparer 9 digits, Serial Number = 11 digits Note: serial# is unique for 180 days	Based on Channel Application Identifier, STC, MID, and Serial Mod 10 (values in the even-positions * 3 plus values in the odd-positions)

Table 4-15 Electronic File Name Dynamic Fields

The following validations are specific to the generation of Shipping Services Files (SSF) and is the first step in Tracking Services.

Warning Code	Mail.dat Server Warning Message	Action
7195	Tracking Services will not be available for Postage Statement ID {1} unless a valid .mpa MID of Preparer is provided.	Populate the .mpa MID of Preparer with a valid MID.
7196	Tracking Services will not be available for all pieces associated to Postage Statement ID {1} unless a valid .pdr IM/TM Barcode is provided.	Populate the .pdr IM/TM Barcode with a valid value.
7197	Tracking Services will not be available for all pieces associated to Postage Statement ID {1} when a 5, 9 or 11 digit .pdr Piece Barcode is not provided or the .up Address field is not populated.	Populate the .pdr Piece Barcode field or the .up Address field.
7204	In order to receive Tracking Services, a .pdr file is required.	To receive Tracking Services, submit a .pdr file instead of a .pbc file.

Table 4-16 SSF Generation Specific Warning Codes

4.2.14 Start-the-Clock

Information in the electronic documentation is used along with data captured at arrival at the USPS to determine Start-the-Clock for each container in the mail.dat. It is critical that the mail.dat .CSM file is accurately populated to correctly identify two separate pieces of information. These will each be covered in additional detail in the two sub-sections that follow.

- How the container is being transported to the USPS (Induction Method)
- Where the container is being left in the USPS (Entry Location)

4.2.14.1 Induction Method

The first piece of information that impact Start-the-Clock from eDoc is accurate identification of the induction method. There are five different induction methods or ways of entering mail with the USPS. The electronic documentation indicates which induction method is being used within the .CSM file for each container.

- BMEU: Container is brought to the BMEU for verification and payment left at the BMEU.

Entry Point for Entry Discount Facility Type	Origin NDC, Origin ASF, Origin ADC, Origin SCF, Origin, or Origin AMF
USPS Pick-Up Indicator	No
Reservation Number	Blank

Table 4-17 .CSM Fields BMEU

- DMU Verified, USPS Transported: Container is verified and paid at the mailer's Detached Mail Unit and then transported on a USPS truck directly to a USPS facility for processing. This is only a valid induction method for origin-entry mail.

Entry Point for Entry Discount Facility Type	Origin NDC, Origin ASF, Origin ADC, Origin SCF, Origin, or Origin AMF
USPS Pick-Up Indicator	Yes
Reservation Number	Blank

Table 4-18 .CSM Fields DMU Verified

- Origin Verified, Mailer Transported: Container is verified and paid at the mailer's Detached Mail Unit or at a BMEU and then transported by the mailer directly to a USPS processing facility. This is only a valid induction method for origin-entry mail. This is the induction method being used if an 8017/e8017 is created.

Entry Point for Entry Discount Facility Type	Origin NDC, Origin ASF, Origin ADC, Origin SCF, Origin, or Origin AMF
USPS Pick-Up Indicator	No
Reservation Number	Optional – May be populated with a FAST one-time or recurring appointment ID

Table 4-19 .CSM Fields Origin Verified

- Drop-Ship to an NDC, ADC, FSS, or SCF: Container is transported by the mailer directly to a USPS processing facility and the container is claiming a drop-ship discount. This is the induction method being used if an 8125/e8125 is created and an NDC, ADC, FSS, or SCF discount is claimed.

Entry Point for Entry Discount Facility Type	DNDC, ADC, DSCF, DFSS, DAMF/DSCF, ASF/DNDC
USPS Pick-Up Indicator	No
Reservation Number	Optional – May be populated with a FAST one-time or recurring appointment ID

Table 4-20 .CSM Fields Drop Ship to NDC, ADC, FSS, or SCF

- Drop-Ship to a Delivery Unit: Container is transported by the mailer directly to a USPS delivery unit and the container is claiming a drop-ship delivery unit discount.

Entry Point for Entry Discount Facility Type	DDU
USPS Pick-Up Indicator	No
Reservation Number	Optional – May be populated with a FAST one-time or recurring appointment ID if the delivery unit allows appointments to be created

Table 4-21 .CSM Fields Drop Ship to Delivery Unit

4.2.14.2 Entry Location

The second piece of information that impacts Start-the-Clock is the identification of the entry location of a container. Depending on the induction method, there are different USPS data sources for accurately identifying the entry location of a container to populate the electronic documentation. The USPS strongly recommends that the entry location be identified using a locale key and placed in the Entry Point – Actual/Delivery – Locale Key field in the .CSM file. The locale key is a unique identifier for every USPS facility.

Induction Method	USPS Data Source
BMEU	Facility File from the Drop-Ship Product
DMU – Verified, USPS Transported	CSA or Facility File from the Drop Ship Product
Origin – Verified, Mailer Transported	CSA or Facility File from the Drop Ship Product
Drop-Ship to an NDC, ADC, SCF, or FSS	Mail Direction File from the Drop Ship Product
Drop-Ship to a Delivery Unit	Mail Direction File from the Drop Ship Product

Table 4-22 Locale Key Data Source for Entry Point – Actual/Delivery – Locale Key Field

- Customer Supplier Agreement (CSA)

The CSA is a joint agreement created with a specific mailer at a specific location that defines palletization rules and entry locations for that mailer's First-Class volume. Most First-Class mailers do not have a CSA. Within the CSA, the entry location for a specific pallet preparation is found in the Facility Locale Key. Different pallet preparations for the same mailer may have different entry locations; make certain that the correct entry location for a specific pallet preparation is being added to the .CSM file. If a CSA is available for a mailer, it can be downloaded from the FAST website at <http://fast.usps.com>.

- Facility File from the Drop Ship Product

The Facility File is part of the drop ship product available from the FAST website at <https://fast.usps.com/fast/fastApp/resources/dropShipFileDownload.action>. An updated version of the drop ship product is available on the first day of every month. One of the files within the drop ship product is the Facility File. The Facility File includes information about every USPS entry location including the locale key. The locale key for a facility can be looked up in the facility file if the user already knows the facility name, facility address, or facility city and state.

- Mail Direction File from the Drop Ship Product

The Mail Direction File is part of the drop ship product available from the FAST website at <https://fast.usps.com/fast/fastApp/resources/dropShipFileDownload.action>. An updated version of the drop ship product is available on the first day of every month. One of the files within the drop ship product is the Mail Direction File. There are three version of the Mail Direction File (v1, v2, and v3). Any of the versions can be used to get the locale key of any drop-ship location within the USPS network. Additional instructions on using the Mail Direction File are available here: <https://fast.usps.com/jobaid/MailDirectionReport.pdf>.

4.2.15 Value Added Refunds (VAR)

A mailer or other party who prepares letter size First Class Mail or Standard Mail for their customers and presents it to the USPS in their behalf may request a value added refund for postage affixed to the mail in excess of the price applicable to that mail when presented to the USPS. The presenter (mailer or other party) must be authorized by the USPS to seek the refund.

In order for a value added refund transaction to be generated the Mail.dat eDoc file must meet the following criteria

- .hdr Presentation Category populated with M = MLOCR
- .seg Processing Category populated with LT = Letters
- .mpa Postage Payment Method populated with M = Metered: Neither

If the MT permit is VAR eligible and the affixed postage for the mailing is at least \$50.00 greater than the total postage, then a VAR will be generated. For more information on value added refunds refer to DMM Section 604.9.4.

4.3 Postage Payment

This section discusses how to list the parties involved in a postage statement, including designating the permits to be used for payment. There are subsections: Postage Statement Generation, Rejection and Conflict Resolution, Permit Roles, Additional Postage, Non-incidental Enclosures, and Combined Mail.

4.3.1 Postage Statement Generation

This section discusses the key fields used to generate qualification reports, postage statements within a job, and master postage statements based on the Mail.dat, 14-1, and 14-2 specifications and the *PostalOne!* system.

The *PostalOne!* system automatically generates a new qualification report each time there is a new value found in the Segment file Segment ID.

4.3.1.1 Non-Periodicals Key Postage Statement Generation Fields

The *PostalOne!* system automatically generates a new postage statement each time a unique set of information is found in the fields listed below:

Field	Records	Notes
Job ID	(Multiple files)	Must be identical for all files in the job.
Mailing Facility	(Multiple files)	Must be identical for all files in the job.
Provider Code or User License Code	(Multiple files)	Must be identical for all files in the job. This field is case sensitive for Mail.dat validation.
Standard Flat Type	Component (CPT)	Standard mail only.
Container Status	Container Summary (CSM)	
Postage Grouping ID	Container Summary (CSM)	
Postage Statement Mailing Date	Container Summary (CSM)	This is the Mailers Mailing Date on the postage statement.
Included In Other Documentation	Container Summary (CSM)	
Customer Reference ID (previously known as CAPS Reference ID)	Mailer Postage Account (MPA)	
Federal Agency Cost Code	Mailer Postage Account (MPA)	
Permit Number	Mailer Postage Account (MPA)	Pending Periodicals and non-Periodicals, including enclosures
Permit ZIP+ 4	Mailer Postage Account (MPA)	
Postage Payment Method	Mailer Postage Account (MPA)	
Permit Number for the corresponding .mcr Additional Postage MPA ID.	Mailer Postage Account (MPA)	
Postage Payment Method for the corresponding .mcr Additional Postage MPA ID.	Mailer Postage Account (MPA)	

Field	Records	Notes
Rate Type	Mailpiece Unit (MPU)	The .mpu Rate Type will not be used as a postage statement generation variable when the .hdr Presentation Category is N = Single Piece for Priority Mail.
Rate Schedule	Mailpiece Unit (MPU)	
Processing Category	Mailpiece Unit (MPU) or Component (CPT)*	
Mail Piece Unit - Class		
Component Class	Mailpiece Unit (MPU) or	
Component (CPT)*		
Standard Flat Type	Mail Piece Unit (MPU)	Standard Mail only.
<Mail Class> Sacking Criteria	Segment (SEG)	
Packaging Services Packaging Criteria	Segment (SEG)	
Detached Mailing Label Indicator	Segment (SEG)	Standard Mail and Bound Printed Matter
Included in Other Documentation	Container Summary (CSM)	

Table 4-23 Key Postage Statement Generation Fields for Non-Periodicals

After individual postage statements are created, if applicable, a Master Postage Statement is generated for each combination of various values in the following fields. If there are several Automation Coding Dates, Carrier Route Coding Dates, or Carrier Route Sequencing Dates, the earliest dates apply to the entire statement.

Note: The earliest date will not include the default date of 00010101.

Mail.dat jobs that generate a single billable postage statement will display the verification data in that statement and not in a separate Master Postage Statement.

Field	Records
Job ID	(Multiple files)
Mailing Facility	(Multiple files)
Postage Statement Mailing Date	Container Summary (CSM)
Processing Category	Mailpiece Unit (MPU) or Component (CPT)

Table 4-24 Key Master Postage Statement Consolidation Fields for Non-Periodicals

4.3.1.2 Periodicals Key Postage Statement Generation Fields

The *PostalOne!* system automatically generates a new Periodicals postage statement each time a unique set of information is found in the fields listed below:

Field	Records	Notes
Job ID	(Multiple files)	Must be identical for all files in the job.
Mailing Facility	(Multiple files)	Must be identical for all files in the job.
Provider Code or User License Code	(Multiple files)	Must be identical for all files in the job. This field is case sensitive for Mail.dat validation.
Periodicals Issue Number	Component (CPT)	
Periodicals Volume Number	Component (CPT)	
Periodicals Frequency	Component (CPT)	
Periodicals Issue Date	Component (CPT)	
Container Status	Container Summary (CSM)	
Entry Point for Entry Discount Postal Code	Container Summary (CSM)	
Entry Point - Actual/Delivery – Locale Key	Container Summary (CSM)	

Field	Records	Notes
Postage Grouping ID	Container Summary (CSM)	
Postage Statement Mailing Date	Container Summary (CSM)	This is the Mailers Mailing Date on the postage statement.
Customer Reference ID (previously known as CAPS Reference ID)	Mailer Postage Account (MPA)	
Permit ZIP+ 4	Mailer Postage Account (MPA)	
Postage Payment Method	Mailer Postage Account (MPA)	
Publication Number	Mailer Postage Account (MPA)	
Rate Type	Mailpiece Unit (MPU)	
Mail Piece Unit (MPU) ID	Mailpiece Unit (MPU)	
Mail Piece Unit Weight	Mailpiece Unit (MPU)	
Mail Piece Unit Name	Mailpiece Unit (MPU)	
Periodicals Advertising Percentage	Component (CPT)*	
Processing Category	Mailpiece Unit (MPU) or Component (CPT)*	
Mail Piece Unit - Class		
Component Class	Mailpiece Unit (MPU) or	
Component (CPT)*		
Automation Coding Date	Segment (SEG)	
Carrier Route Coding Date	Segment (SEG)	
Carrier Route Sequencing Date	Segment (SEG)	
Container and Bundle Charge Method	Segment (SEG)	
MPA ID for Container and Bundle Charge Method	Segment (SEG)	
Full-Service Participation Indicator	Segment (SEG)	
Note: * When both MPU and CPT values are listed, the CPT values are used for enclosures.		

Table 4-25 Key Postage Statement Generation Fields for Periodicals

Once postage statements have been created, the *PostaOne!* system reviews the new statements to see if consolidation is necessary. A consolidated and billable statement is generated for each unique set of the listed fields within a job.

Individual postage statements are generated for each unique Permit/USPS Pub number and each distinct Postage Statement Mailing Date column in the CSM file. Additionally, the *PostaOne!* system generates a new postage statement for each unique occurrence of the CRID for the subset of the mailing identified by that ID. For all classes of mail, the child statements are not billed individually but are used to construct the Register.

Individual postage statements will also be generated for multiple CAPS accounts used in a single co-mingled mailing. Unique Permit/USPS Pub numbers and the Postage Payment Option set to T for CAPS will drive the generation of these postage statements.

In the Periodicals mailing class, the child statements are used to calculate the total postage due. For the Periodicals mailing class, the *PostaOne!* system consolidates postage statements across segments for an entire Mail.dat file.

This applies to all files within a job that contain the same values for a postage statement:

Field	Records
Job ID	(Multiple files)
Mailing Facility	(Multiple files)
Periodicals Issue Date	Component (CPT)
Periodicals Issue Number	Component (CPT)

Field	Records
Periodicals Volume Number	Component (CPT)
Container Status	Container Summary (CSM)
Customer Reference ID (previously known as CAPS reference ID)	Mailer Postage Account (MPA)
Federal Agency Cost Code	Mailer Postage Account (MPA)
Permit ZIP Code + 4	Mailer Postage Account (MPA)
Postage Payment Method	Mailer Postage Account (MPA)
USPS Publication Number	Mailer Postage Account (MPA)
Rate Type	Mailpiece Unit (MPU)
Mail Piece Unit Class	
Component Class	Mailpiece Unit (MPU) or
Component (CPT)	
Processing Category	Mailpiece Unit (MPU) or Component (CPT)
Container and Bundle Charge Method	Segment (SEG)

Table 4-26 Key Postage Statement Consolidation Fields for Periodicals

After individual postage statements are created if applicable, a Verification Statement is generated for each combination of various values in the following fields. If there are several Automation Coding Dates, Carrier Route Coding Dates, or Carrier Route Sequencing Dates, the earliest dates apply to the entire statement.

Note: The earliest date will not include the default date of 00010101.

A verification statement will not be generated when there is only one billable statement. The information for the periodicals verifications statement will be displayed on the billable statement.

Field	Records
Job ID	(Multiple files)
Mailing Facility	(Multiple files)
Postage Statement Mailing Date	Container Summary (CSM)
Processing Category	Mailpiece Unit (MPU) or Component (CPT)

Table 4-27 Key Verification Statement Consolidation Fields for Periodicals

4.3.2 Postage Statement Mapping

This section outlines how Mail.dat values are mapping to fields on the postage statement.

4.3.2.1 Non-Periodicals Postage Statement Mapping - Mailing Group Summary Information

The *PostalOne!* system will populate the Mailing Group Summary Information section of the Non-Periodicals Postage Statements based on information that is provided in the mailing. The fields listed below determine the values that will be populated in the Mailing Group Summary Information section:

Mailing Group Summary Information Fields	Record/Field	Notes
Mailing Group ID	N/A	Mailing Group Unique Sequence Number
Preparer	.seg Mailing Facility ID	Look up Company Name using Permit information from Mailing Facility ID
Description	.hdr Job Name/Title & Issue	
Mailers Job #	.hdr Job ID	
Origin	N/A	Displays MDAT
Finance No:	N/A	
Open Date	N/A	Date the mailing group was opened
Close Date	N/A	Date the Postage Statement was Finalized

Table 4-28 Mailing Group Summary Information Fields

4.3.2.2 Non-Periodicals Postage Statement Mapping - Mailer Information

The *PostalOne!* system will populate the Mailer Information section of the Non - Periodicals Postage Statement based on the information that is provided in the mailing. The fields listed below will determine the values that will be populated in the Mailer Information Section of a Periodicals postage statement:

Non-Periodicals Mailer Information	Record/Field	Notes
Permit Holder	.mpa Permit Number	This is the permit charged for the postage statement. For each mailpiece unit, the <i>PostalOne!</i> system uses the MCR file to find the MPA ID. This is represented in the MPA file as Permit Number. The Postage Payment Method, identifies the permit type of the listed Permit Number in the Mail.dat file.
Mailing Agent	.mpa Permit Number	This identifies the organization that prepared the mailing and/or delivered it to the postal service for mailing. This information is linked to the users login account, and is not represented in the Mail.dat file.
To attach a Mail.dat file to a preparer permit, the <i>PostalOne!</i> System looks at the User ID that submitted the file. The system looks at permits linked to the locations that User ID is also linked to. (See Permit Roles for more information.)		
Org. For Mailing is Prepared	.mpa Mail Owners LCL Permit Ref Number	This identifies the organization who owns the mail being sent. For each mailpiece unit, the <i>PostalOne!</i> System uses the MCR file to find the MPA ID. The mail owner is represented in the MPA file as Mail Owners Lcl Permit Num / Intl Bill Num. If this field is left blank, then the default permit in the postage statement is the same as the permit holder.
Permit Holders Permit	.mpa Permit Number	
Mailing Agents Permit	N/A	The system will use Mailing Zip to get the Finance Number.
Use the Finance Number and Mailing Facility		
to get either Ghost Permit or Permit Imprint		
Permit (Ghost Permit is only used if Permit Imprint Permit is not found). The Permit is used to retrieve display information.		
USPS Nonprofit Auth. No.	.mpa Non-Profit Authorization Number	

Table 4-29 Mailer Information – Non Periodicals

4.3.2.3 Non-Periodicals Postage Statement Mapping - Mailing / Postage Summary Information

The *PostalOne!* system will populate the Mailing / Postage Summary information section of the Postage Statement based on information that is provided in the mailing for non-periodicals. The fields listed below determine the values that will be populated in the Mailing Information section:

Non-Periodicals Postage Summary Fields	Record/Field	Notes
Post Office of Mailing	.mpa Permit ZIP+4	

Non-Periodicals Postage Summary Fields	Record/Field	Notes
Processing Category	.mpu Mail Piece Unit – Processing Category	
Mailers Mailing Date	.csm Postage Statement Mailing Date	
Federal Agency Cost Code	.mpa Federal Agency Cost Code	
Statement Seq. No	N/A	System generated sequence number
No. & type of Containers	.csm	Sum of containers grouped by Container Type
Type of Postage	.mpa Postage Payment Method	
Weight of a Single Piece	.mpu Mail Piece Unit Weight	If all pieces have one, distinct weight, the weight is displayed; if pieces have multiple weights, zero is displayed
Hold For Pickup	Hold For Pickup	First-Class Mail, Priority Mail, and Package Services only
Combined Mailing	Multiple	When a Master Statement is created for Non-Periodicals mailing based on Table 4-24 Key Master Postage Statement Consolidation Fields for Non-Periodicals
Total Pieces	.cqt Number of Pieces	First-Class Mail, Standard Mail, and Package Services only
Of Total Pieces, # With Simplified Addresses	.cqt Number of Pieces, .cqt Simplified Address Indicator	Standard Mail Only
Of total pieces # with Mobile Interactive Technology	.ccr Characteristic	Use the .ccr Characteristic field to find the CPT ID, MCR ID, and MPU ID affected. Find the number of pieces in the CPT for the MPU ID affected.
Total Weight	.mpu Weight	Sum of weight of pieces using MPU weight.
Permit #	.mpa Permit Number	Additional postage permit number as indicated by the .mcr file Additional Postage MPA ID
For Mail Enclosed Within Another Class	.mpu Mail Piece Unit - Class	First-Class Mail, Priority Mail, and Standard Mail only
For Automation Price Pieces, Enter Date of Address Matching and Coding	.seg Automation Coding Date	
For Carrier Route Price Piece, Enter Date for Address Matching and Coding	.seg Carrier Route Coding Date	Standard Mail only
For Carrier Route Price Pieces, Enter Date of Carrier Route Sequencing	.seg Carrier Route Sequencing Date	Standard Mail only
For pieces bearing a simplified address enter data of delivery statistics file or alternative method	.seg Delivery Statistics File Date	Standard Mail only
Move Update Method	.seg Move Update Method	First-Class Mail and Standard Mail only for presorted or automation prices. For more information see the Guide to Move Update .

Table 4-30 Mailing / Postage Summary Information – Non Periodicals

4.3.2.4 Periodicals Postage Statement Mapping - Mailing Group Summary Information

The *PostalOne!* system will populate the Mailing Group Summary Information section of the Periodicals Postage Statements based on information that is provided in the mailing. The fields listed below determine the values that will be populated in the Mailing Group Summary Information section:

Mailing Group Summary Information Fields	Record/Field	Notes
Mailing Group ID	N/A	Mailing Group Unique Sequence Number
Preparer	.seg Mailing Facility ID	Look up Company Name using Permit information from Mailing Facility ID
Description	.hdr Job Name / Title & Issue	
Mailers Job #	.hdr Job ID	
Origin	N/A	Displays MDAT
Finance No:	N/A	Stored Finance Number from mailing group information
Open Date	N/A	Date the mailing group was opened
Close Date	N/A	Date the Postage Statement was Finalized

Table 4-25 Mailing Group Summary Information Fields

4.3.2.5 Periodicals Postage Statement Mapping - Mailer Information

The *PostalOne!* system will populate the Mailer Information section of the Periodicals Postage Statement based on the information that is provided in the mailing. The fields listed below will determine the values that will be populated in the Mailer Information Section of a Periodicals postage statement:

Periodicals Mailer Information Fields	Record/Field	Notes
Publication Title and Owner or News Agents Name	.mpa USPS Publication Number	The system will use the Publication Number to look up permit data that will be used to retrieve the Title and Owner of new Agents Name
Mailers Name, Address, Telephone Number, and Email	.mpa USPS Publication Number	The system will use the Publication Number to look up Permit Holder Information
Entry Post Office Name, State, and ZIP+4	.mpa Permit ZIP+4	The system will look up the Finance Number to retrieve the city, state, and ZIP for the Post Office of Mailing

Table 4-31 Mailer Information – Periodicals

4.3.2.6 Periodicals Postage Statement Mapping - Mailing Information

The *PostalOne!* system will populate the Mailing Information section of the Periodicals Postage Statement based on information that is provided in the mailing for Periodicals mailings. The fields listed below will determine the values that will be populated in the Mailing Information Section:

Mailing Information Periodicals Fields	Record/Field	Notes
Statement for bundles/containers only	N/A	
Price Category	.mpu Mail Piece Unit – Rate Type	
Combined Mailing	Multiple	When a Master Statement is created for Periodicals mailing based on Table 4-24 Key Master Postage Statement Consolidation Fields for Non-Periodicals.
.mpa Permit Number field will be used for Pending Periodicals		
Consolidated Postage Statement	NA	Consolidated Mailing checkbox will be checked when a Mail.dat job is submitted as a consolidated periodical statement.
Publication No.	.mpa USPS Publication Number	

Mailing Information Periodicals Fields	Record/Field	Notes
Edition/Code	.mpu Mail Piece Unit Name	
Mailers Mailing Date:	.csm Postage Statement Mailing Date	
Processing Category	.mpu Mail Piece Unit – Processing Category	
No. of Addressed Pieces Excluding Address Supplements	N/A	Sum of the number of pieces for each line item for each completed part of the postage statement (excluding Addressed Supplements)
In-County Addressed Supplements	.mpu Mail Piece Unit – Class, .cpt Component – Rate Type	Sum of the number of In-County Addressed Supplements
Out-County Addressed Supplements	.mpu Mail Piece Unit – Class, .cpt Component – Rate Type	Sum of the number of Out-County Addressed Supplements
Of total pieces # with Mobile Interactive Technology	.ccr Characteristic	Use the .ccr Characteristic field to find the CPT ID, MCR ID, and MPU ID affected. Find the number of pieces in the CPT for the MPU ID affected.
Issue Date	.cpt Periodical Issue Date	
Volume Number	.cpt Periodical Volume Number	
Issue Number	.cpt Periodical Issue Number	
Issue Frequency	.cpt Periodical Frequency	
Statement Sequence No.	N/A	System generated sequence number
Weight of Single Ride-Along Piece	.cpt Component - Weight	Calculated for Rate Type H (Ride Along Weight)
Weight per Copy for Issue	.cpt Component – Weight	Calculated for the .cpt records that are not Ride Alongs or non-incidental enclosures
Advertising Percentage in This Issue	.cpt Component – Periodical Ad Percentage	
Number and Type of Containers	.csm	Sum of containers grouped by Container Type
For Automation Price Pieces, Enter Date for Address Matching and Coding	.seg Automation Coding Date	
For Carrier Route Price Piece, Enter Date for Address Matching and Coding	.seg Carrier Route Coding Date	
For Carrier Route Price Pieces, Enter Date of Carrier Route Sequencing	.seg Carrier Route Sequencing Date	
For pieces bearing a simplified address enter data of delivery statistics file or alternative method	.seg Delivery Statistics File Date	
Total Postage	N/A	Calculated by summing the total postage for all parts of the postage statement

Table 4-32 Mailing Information - Periodicals

4.3.3 Permit Roles

Postage statements have three primary roles Permit Holder, Mailing Agent, and Mail Owner. For all three roles The Permit Number or the USPS Publication Number must have Active status in the *PostalOne!* system and have the required fields populated by the acceptance office. The system shall use the Name and Address for the Mailing Agent, Mailing Owner and Preparer from address of the CRID to populate the postage statement record. Each role is explained below.

Permit Holder. This is the permit charged for the postage statement. For each mailpiece unit, the *PostalOne!* system uses the MCR file to find the MPA ID. This is represented in the MPA file as Permit Number or USPS Publication Number.

The Postage Payment Method identifies the permit type of the listed Permit Number in the Mail.dat file. For Periodicals mail, the permit holder must be the USPS Publication Number. To qualify for Periodicals Nonprofit, Classroom or Science of Agriculture prices, the USPS Publication Number record at the acceptance office must show this price is authorized. If not, the system generates an error message and will not accept the Mail.dat file.

Mailing Agent (Preparer). This identifies the organization that prepared the mailing and/or delivered it to the postal service for mailing. This information is linked to the users login account, and is not represented in the Mail.dat file. The *PostalOne!* system only identifies one mailing agent per postage statement.

To attach a Mail.dat file to a preparer permit, the *PostalOne!* system looks at the User ID that submitted the file. The system looks at permits linked to the locations that User ID is also linked to. The system looks at the post office of mailing. The system considers finance number association of permits linked to locations to finance number of post office of mailing. If the system finds more than one permit possibility, system takes first active (type PI) permit (could be any of the linked locations, not necessarily the one that submitted the file). For this reason the attached preparer permit may not be accurate and the user may not be able to fix it.

In the Mailing Agent block on the Postage Statement, the company name and address information found from the CRID in the Mail.dat MPA Preparer CRID shall be displayed. If the Mail.dat file MPA Preparer CRID is used, then the preparer permit number, telephone number, email address, or customer number will not be displayed. The submitter of the Mail.dat file may update this CRID. The owner of the CRID may update the name and address information associated with the CRID. If the Mail.dat file MPA Preparer CRID is blank, then the Mailing Agent block will be filled with the name and address information found from the preparer permit attached to the Mail.dat file. The preparer permit number and the associated company name, address, telephone number, and email address will be displayed. The name and address information on this permit may be updated by the postal clerk and will apply to subsequent Mail.dat updates.

Organization for Mailing is Prepared (Owner): This identifies the organization who owns the mail being sent. For each mailpiece unit, the *PostalOne!* system uses the MCR file to find the MPA ID. The mail owner is represented in the MPA file as Mail Owners Lcl Permit Num/Intl Bill Num. If this field is left blank, then the default in the postage statement is the same as the permit holder. The permit type for this permit number is Mail Owners Lcl Permit Ref Num/Intl Bill Num Type in the Mail.dat file. For example, if a ghost permit is listed in Mail Owners Lcl Permit Num / Intl Bill Num, then position 98 will be listed as V = Virtual. To qualify for the Nonprofit Standard mail price, in the MPU file Rate Type, the system checks that the CRID associated to the Mail Owners Lcl Permit Num / Intl Bill Num (or if blank the default Permit Number of the permit holder) record in the *PostalOne!* system has a valid nonprofit authorization number assigned to it. If so, the system allows the Nonprofit Standard mail price. If not, the system generates an error message and will not accept the Mail.dat file.

For an example of these fields on a postage statement, see Figure 4-2 Postage Payment Roles below

Postage Summary								
Permit Holder:	PAYER 1 COMMERCE STREET A CITY, ZZ 12345-1234 Contact: JOHN DOE (123) 555 - 1234 jdoe@owner.com	Mailing Agent:	MAIL PREPARER 9 PUBLISHER STREET A CITY, ZZ 12345-8878 Telephone: (123) 555-4321	Org. Move Update Method:	ACS							
Statement Certification Date: 10/06/2010		Transaction Date: 10/06/2010						

Figure 4-2 Postage Payment Roles

All Mailer Postage Account (MPA) records must have a value in the Permit ZIP+4/Postal Code field. For Non – Periodicals, the Permit ZIP+4 values must be the ZIP Code associated with the Post Office location where the permit is

held. For periodicals, an additional entry office location will be added to the Publication Number for the Post Office location associated to the permit ZIP+4/Postal Code. The *PostalOne!* application requires the Permit ZIP+4 field as part of the information necessary to uniquely identify a Permit number or USPS Publication Number at a Post Office location. For the *PostalOne!* system to complete an end-to-end transaction, it is necessary to have the Permit ZIP+4 information with all postage transactions.

4.3.4 Postage Statement By/For Information

The *PostalOne!* system will implement By/For Enhancements for Mail.dat 12-2 and after

The *PostalOne!* system will use the order of precedence determined in the table below to determine the Mail Preparer (By) and Mail Owner (For) for postage statement processing. If a CRID or MID provided in the By/For is determined to be invalid, the *PostalOne!* system will skip that By/For precedence and move on to the next precedence.

Note: This Postage Statement By/For is different from the SASP By/For that is found in Section 4.2.9.1 Full-service Data Distribution.

Mail.dat File	Mail.dat Field name	Identifies	Order of Precedence
MPA	Mailer ID of Preparer	Preparer	First
MPA	CRID of Preparer	Preparer	Second
N/A	CRID from Permit Role of Mailing Agent via Section 4.3.3	Preparer	Third

Table 4-33 Mail Preparer (By) – PDR or PBC

Mail.dat File	Mail.dat Field name	Identifies	Order of Precedence
CPT	Mailer ID of Mail Owner	Owner	First
MPA	Mailer ID of Mail Owner	Owner	Second
CPT	CRID of Mail Owner	Owner	Third
MPA	CRID of Mail Owner	Owner	Fourth
MPA	Mail Owner's Lcl Permit Ref Num / Int'l Bill Num	Owner	Fifth

Table 4-34 Mail Owner (For) – PDR or PBC

4.3.5 Nonprofit Postage Statement By/For Information

4.3.5.1 Nonprofit Authorization

Currently nonprofit authorization is linked to a permit; mailers who claim nonprofit prices in a mailing are required to identify the authorized nonprofit organization in the electronic documentation (eDoc). This is done by providing a Permit Number that has been linked to an active nonprofit authorization number in the appropriate fields of the eDoc.

In the November 2014 release, mailers will have additional options for identifying the authorized nonprofit organization. The mail owner Customer Reference ID (CRID) and Mail Owner Mailer ID (MID) can be used to identify the authorized nonprofit organization in the eDoc in addition to a Permit Number.

The validation rule to qualify for the nonprofit prices will not change. Either the paying permit (Permit Holder) or the mail owner identifier used for nonprofit authorization identification in the eDoc must have a valid nonprofit authorization number linked to it. If not, the system generates a server validation error message and hence will fail the Mail.dat and Mail.XML file. Note that server validation errors are thrown after a job validates and uploads to the *PostalOne!* system.

4.3.5.2 Nonprofit Mail Owner

For nonprofit mailings, mailers who submit a nonprofit eligible mailing and who identify the authorized nonprofit organization in the eDoc using one of the allowable mail owner identifiers, the nonprofit entity verified by the *PostalOne!* system is deemed to be the Mail Owner for the "For" entity.

There will be no change to the manner in which the *PostalOne!* system derives the Mailing Agent "By" entity. For Mail Owner postage statement display, the company name and address of the (authorized nonprofit organization) Mail Owner is displayed on the postage statement mail owner block.

The *PostalOne!* system will first check the Permit Number and Permit ZIP+4 fields to determine if the Permit Holder is authorized. If not, a Mail Owner must be identified through one of the following fields. *PostalOne!* will continue to the next order of precedence until a valid value to identify a nonprofit Mail Owner is detected.

Ghost permits will continue to be supported for mail service providers to identify a mailer who is not the permit holder for the Nonprofit mailing. The Ghost permit is identified in the Mail Owners Lcl Permit Num / Intl Bill Num field for Mail.dat

NPA Mail Owner Identification Order of Precedence		
Mail.dat File	Mail.dat Field name	Identifies
MPA	Permit Number, Permit ZIP+4, Postage Payment Method	Permit Holder
CPT	Mailer ID of Mail Owner	Owner
MPA	Mailer ID of Mail Owner	Owner
CPT	CRID of Mail Owner	Owner
MPA	CRID of Mail Owner	Owner
MPA	Mail Owner's Lcl Permit Ref Num / Int'l Bill Num, Mail Owner's Lcl Permit Ref Num/ Int'l Bill Num - Type	Owner

Table 4-35 Nonprofit Identification

4.3.6 Additional Postage

When postage affixed (precanceled stamp or meter) is used, the file must include a separate MPA record. This separate MPA record **MUST** be linked to a Permit Imprint account; Postage Payment Method must be a P.

Note: An MLOCR mailing with Postage Payment Method (MPA) values G =Government, S = Precanceled stamps, C = Metered - Correct, L = Metered – Lowest, or M = Metered – Neither must have one Additional Postage MPA ID in the MCR record. Only one account is allowed for additional postage payment for this type of mailing, even if the mailing includes multiple statements. The first record must be a Metered or Precanceled Stamp permit, and is used to authorize the mailing. All subsequent MPA records must be Permit Imprint or Additional Postage (ADDPOS) permits, and are used to charge any additional postage due.

4.3.6.1 Presort & MLOCR Regular (2-pass) Files:

The MCR file links to the MPA record. The Primary MPA ID of the MCR record maps to the MPA Unique Sequence ID of the primary permits in the MPA record. When there is additional postage, then the Additional Postage MPA ID of the MCR record maps to the MPA Unique Sequence/Grouping ID of the Permit Imprint in the MPA record set for additional postage in the Mail.dat file.

Note: A MLOCR mailing with Postage Payment Method MPA values G = Government, S = Precanceled stamps, C = Metered - Correct, L = Metered – Lowest, or M = Metered – Neither must have one Additional Postage MPA ID in the MCR record. Only one account is allowed for additional postage payment for this type of mailing, even if the mailing includes multiple statements. The first record must be a Metered or Precanceled Stamp permit, and is used to authorize the mailing. All subsequent MPA records must be Permit Imprint or Additional Postage (ADDPOS) permits, and are used to charge any additional postage due.

To Pay	MCR Record 1	MPA Record 1	MPA Record 2
Postage Statement Charges	Primary MPA ID	MPA Unique Sequence/Grouping ID	
Additional Postage Charges	Additional Postage MPA ID		MPA Unique Sequence/Grouping ID

Table 4-36 Presort and MLOCR Regular ID Requirements

4.3.7 Non-Incidental Enclosures

In Mail.dat non-incidental enclosures are supported for First-Class Mail, Standard Mail, Bound Printed Matter, and for Periodicals. In this case the enclosure is a separate postage statement from the mailpiece it was enclosed within and has

a separate MCR record and MPA record. For Bound Printed Matter or Periodicals mailings that include First-Class Mail or Standard Mail enclosures, the permit used to pay for the enclosure must be a valid Permit Imprint, Metered, Precanceled Stamp, OMAS Imprint, or OMAS Metered permit. To designate a permit as the enclosure permit, in addition to standard required fields, mailers must set the enclosure payment settings as shown in Table 4-.

File	Field	Description
MPA	MPA – Unique Sequence/Grouping ID	Unique identifier for enclosure
MPA	Permit Number (if applicable)	Permit used to pay for the enclosure
MPA	USPS Publication Number (if applicable)	USPS Publication Number used to pay for the enclosure
MCR	Component ID	Component that is the enclosure
MCR	Primary MPA ID	Points to the MPA file
CPT	Component – Class*	For Periodicals with enclosures only.
CPT	Component – Rate Type*	For Periodicals with enclosures only.
Note: * For information on completing these fields, see the Periodical with First-Class or Standard Mail Enclosure section in the Appendix of the IDEAlliance Mail.dat Specification.		

Table 4-37 Enclosure Payment Settings

4.3.8 Combined Mail

There is an indicator on the postage statement for combined mail. Mail from several permit holders may be combined. For non-Periodicals mail, the combined mail single-class box on the postage statement is checked if a Master Statement is generated based on Table 4-24 Key Master Postage Statement Consolidation Fields for Non-Periodicals. For Periodicals mail when there are multiple USPS Publication Numbers or pending Periodicals permit numbers in the MPA file, the combined mail single-class box is checked.

If there are multiple permit holders in the mailing and the mail is from different classes or subclasses, the combined mail multiple classes box is checked. Multiple classes for Package Services combinations of Bound Printed Matter, Media Mail and Library Mail are not supported.

4.3.8.1 Eligibility:

The mail volume of all Permit Holders and Mail Service Providers will be evaluated for Tech Credit eligibility, regardless of each mailers current Full-Service status. This volume will be evaluated across qualifying permits for each business location (CRID).

The following Full-Service eligible mail products will be considered as qualifying mail volume:

- First-Class Mail Automation Letters, Cards, & Flats
- Standard Mail Automation Letters & Flats
- Automation Enhanced Carrier Route (ECR) Letters & Flats
- Periodical Automation/Barcoded Letters & Flats
- Bound Printed Matter (BPM) Barcoded Flats
- Does not include Saturation Flats

For more information, visit [Intelligent Mail Services - Latest News](#)

4.4 Typical File Formatting Problems

As more customers begin to utilize the *PostalOne!* system, several common errors made in formatting fields. For details on field validation, see Section 5, The more common errors are:

- The optional date fields defined in the Mail.dat File Specification are often filled with zeroes. The system validates all optional fields containing information and does not consider zeroes to be acceptable date values.
- The file/record level status flags are not used consistently. The system requires that all file/record level flags be consistent and does not allow any mixed Mail.dat transactions. For example, for an original Mail.dat transaction, all file level status flags should be set to O.

- An attempt to transfer a file fails because of an invalid eDoc Submitter CRID in the segment record. When looking at the actual data, the file shows all of the data in the correct positions according to the Mail.dat File specification. However, the software being used has written a blank record in the carriage return and line feed pair causing the data in the Segment file to be off by two characters. Solution: Delete the blank record and resave the file; the data will be in the proper positions in the file.
- If the files were validated and transferred, but not accepted by the database and the error received is Internal System Error, a file may have null characters. The database will not accept a file with null characters. To spot the null characters, open the Mail.dat files using the Text pad utility. The null characters appear as black squares. Delete the black squares, and then resubmit the files.
- If files cannot be transferred due to an issue with the ZIP Code+4 or a permit, verify with the Postal Service that the permit, or in some cases the ghost permit, exists at the same finance number (ZIP Code) as the permits used to pay for the postage statements in the job. The finance number ZIP Code is in the Mailer Postage Account record. (A ghost permit is a record set up by the Postal Service in the *PostalOne!* database to designate parties on the postage statement that are not the permit holder. For example, the mail owner authorized for nonprofit Standard Mail.)
- A Mail.dat job was submitted successfully; however, upon resending the file, the transfer fails because the job has already been submitted under that specific Job ID. When transferring Mail.dat files, once an original Mail.dat job was transferred successfully, only send subsequent updates to that job. To send the original again, delete the job. For details about updates, see Section 4.5, Sending Job Updates.

4.5 Sending Job Updates

Large mailing jobs are often split into smaller production units, then produced and presented for acceptance incrementally (along with supporting documentation) over several days or even weeks. Specific details of a mailing job may change. For example, a piece weight may have changed or an initial estimated weight becomes finalized when the mail is produced. Also, in-process mailing jobs may be canceled in whole or in part for a variety of reasons. The *PostalOne!* system, via the Mail.dat File specification, accommodates these and other tasks and provides business mailers the means to communicate them to the Postal Service. These scenarios are handled as updates to the original Mail.dat file initially sent to the system. The list below includes the general guidelines for sending updated Mail.dat files:

The system must receive an original Mail.dat file before any update can be received and processed.

Mailers can send multiple updates to a mailing job, as long as they observe the rules established by the Mail.dat File specification and those of the *PostalOne!* system.

For mailers with an Optional Procedure (OP) mailing system, 100% of the containers in a mailing job must eventually be accounted for when a job is updated.

Table 4-30 lists the files a mailer commonly includes in original and update transfers.

Original Mail.dat File	Update
*Header	*Header
*Segment	*Segment
*Mailpiece Unit	Mailpiece Unit
*MPU/C Relationship	Component
*Mailer Postage Account	*Container Summary
*Component	Container Quantity
*Container Summary	Piece Detail
*Container Quantity	Postage Adjustment
*Package Quantity	Package Quantity
Piece Detail	Intelligent Mail Range Record
Intelligent Mail Range Record	
Walk Sequence Record	Note: * Required files

Table 4-38 Files Included in Original and Update Transfers

Following is a common update scenario to an original Mail.dat file: The mailer creates an ORIGINAL mailing data file after presort processing a large job and sends that file to the *PostalOne!* system. For each portion of the job, the mailer produces the incremental portion, presents it for acceptance, and sends an UPDATE to the Mail.dat file. This scenario is illustrated in Figure 2-3 below.

Presort done on entire job		Mail.dat files sent to PostalOne!
1 Mailing Job		Original Mail.dat file sent to PostalOne!
First portion of Mailing Job	Mail produced day X, presented for acceptance.	Updated Mail.dat file sent to PostalOne! for first portion
Second portion of Mailing Job	Mail produced day Y, presented for acceptance.	UPDATED Mail.dat file sent to PostalOne! for second portion
Last portion of Mailing Job	Mail produced day Z, presented for acceptance.	UPDATED Mail.dat file sent to PostalOne! for final portion

Figure 4-3 Sending Job Updates to the *PostalOne!* System

***Note:** Mailers can indicate that a portion or entire mailing job is ready for payment in an Original mailing file. If an entire job or portion of a job is ready to pay and will be presented for acceptance, an Update is not necessary or required unless postage adjustments need to occur or the mailer needs to update transportation information for CSAs or recurring appointments.*

4.5.1 Rules for Sending Container Status Updates

When sending an update transmission, mailers participating in the *PostalOne!* program must follow these rules and requirements: The Header file must contain a U in the appropriate status field.

The *PostalOne!* system validates all container status updates and fails transactions that violate the rules in the following table, which contains the valid container status values to which a given container can be changed. If updating the Container Summary Record, must reflect the appropriate status and have one of the following allowable values:

Container Status	Allowable Next Container Status	Notes
blank or O	D, P, R, X or C	
P	D, P, R or C	
R	D, X, T, or C	Once the postage statement is finalized by the Postal Service only T is allowed.
C	D, P, X or R	
D		No changes allowed.
T	D, X, T, or C	
X	T	

Table 4-39 Allowable CSM Container Status Values

File transfers that include one or more containers with status D result in the cancellation of the entire postage statement and impact the reconciliation report accordingly. The IM Barcodes for the containers, trays, and pieces of a deleted container cannot be used for the 45 days from the time the D status is sent for the container.

Original file transfers can have a container status P or R value. A preliminary or estimated postage statement will be generated with the Qualification Report. This postage statement will have the status EST displayed on the Dashboard.

File transfers with the container status R generate postage statements with a status UPD = USPS Processing Due displayed on the Dashboard. Postal clerks can only finalize (bill) UPD postage statements. If the statement should not be finalized, cancel the job. Postage Statements should not be left open in the UPD status.

If there are CPP Customers who pay postage by having the CPP unit at the Pricing and Classification Service Center in New York enter their postage statements manually, do not send container status R for this mail. Information about how to migrate CPP Customers to eDoc is found in [eDoc Process - A Guide for Centralized Postage Payment \(CPP\) Customers](#).

When the statement is finalized it will be in FIN or FPP status. If a statement for a Mail.dat job is in FIN or FPP status the containers in that Mail.dat job cannot be cancelled. After the postal clerk reverses the postage statement then the postage statement is in REV status and the containers may be cancelled. At this point there are three options

- Send an update ready-to-pay on the same Job ID. The container status R value can only be resent if a container is cancelled (set to C) prior to the second R being sent. The file fails if a second R is sent without canceling the container first.
- If your change cannot be sent as an update, delete the original Job ID and reuse the same Job ID.
- If job deletion fails or there is a requirement for a new Job ID, submit a new Job ID. If there is a FAST appointment, provide the Reservation number, FAST Content ID, and Scheduled Induction Date in the Mail.dat Container Summary CSM file for the new Job ID.

Updates to weight are reflected only in a postage statement with a P or an R value. If an update to weight is received within any other update, it is logged, but no recalculation of the postage statement occurs until a P or an R value is received. Only one estimate of postage is generated for an entire mailing job, unless more than one actual postage statement is required for the mailing or the same containers are sent multiple times with status P. Original job files generate preliminary statements, and group containers by date; to perform these functions, the container status associated with the original submission must be P. A separate update is not required.

A container can be deleted if it is not associated with a postage statement since it is the postage statement that is being deleted, not the existence of the container itself.

A container can be deleted if it is associated with any postage statements at the UPD stage. It will be similar as a cancel job. The associated postage statements will be cancelled and container status of their containers will be reset to **O** if they are not deleted.

A container cannot be deleted if it is associated with a postage statement at one of the following stages: PAV, AVW, FAI, PAS, PEN, COM, FIN, or FPP.

4.5.2 Job Updates

To send an update to an existing Job in the system, make sure that all File Status flags in each file being transmitted reflect a U for update. All subsequent files included in the transfer of an update should include a U in the File Status flag field. For example:

- Even though the HDR file has separate file statuses for each file, all files being submitted must be set to the same value for file status. To add any records to a Mail.dat file, set all submitted files to file status = C. If no records are added, the file statuses can be U. Files that are not being submitted should have a file status of N.
- To add records to a Mail.dat file, those new records should have record statuses of I and existing records should have record statuses of U. All File Status flags in the HDR file must have a C for change.
- If you are adding a file that has not been previously submitted (PAR, PDR, etc.), all file statuses should be C and all records in the new file should have a record status of I.
- If you are adding the PDR file to your Mail.dat in an update, also submit all PQT and CQT records linked to the PDR records submitted.
- The only file that cannot be updated or changed is the PAR file. Only one PAR file can be submitted per job.
- Updates and inserts to the CQT and PQT files will be allowed for Mail.dat files until the CSM Container Status filed is R = Ready to Pay. Existing validations will be rerun for the update or insert job. The Qualification Report is not regenerated after the submission of a CQT or PQT update or insert job. If a postage statement containing updates and inserts to the CQT and PQT files is cancelled, the mailer must resubmit the corresponding updates and inserts in a subsequent Mail.dat submission. After a postage statement is cancelled all updates and inserts are removed.
- Updates to original file records within change jobs will no longer be accepted. If original records (identified by Mail.dat Record Status set to O) are submitted in a change job (identified by HDR File Status set to C), the system compares the submitted values in the change job with the existing values already submitted for that record. If the original records have updated values, the system rejects the job. If a mailer intends to update a

record, then the Record Status field must be populated with U to ensure that the job is accepted and the updates are successfully loaded into the *PostalOne!* database.

Alternately, to resend an original file, first delete the job, and then resend the job. The same Job ID can be used if the first attempt to submit if the file is deleted prior to the second attempt. If Job deletion fails or there is a requirement for a new Job ID, submit a new Job ID. If there is a FAST appointment, provide the Reservation number, FAST Content ID, and Scheduled Induction Date in the Mail.dat Container Summary CSM file for the new Job ID.

Duplicate original or update jobs that are submitted simultaneously will be rejected. Previously, if two users submitted the same job at the same time, or if a user submitted a job using the Mail.dat client application at the same time that their batch process submitted it, both jobs would be accepted and neither job could be completed or updated successfully.

Mailers can no longer cancel files submitted using Mail.dat files if the job has been frozen for processing by a postal employee.

Mailers must include the CSM file for all Update and Change jobs. The mailing will be rejected If the CSM file is not included.

Mailers must include the PQT and the PDR for Full-Service or Mixed Service mailings to ensure that Full-Service feedback is provided.

4.5.3 Transportation Updates

To update transportation information, use the T value to update the FAST recurring appointment and CSA information and container barcode information in a file set of R or X. The only way to update a file marked X is with a T. A T value is accepted only after an R or X has been sent because no transportation update is necessary until the indication of payment. You can update transportation information only after it has been marked R = Ready to pay or X = Paid and Closed. Original file transfers fail if a T is sent.

For a transportation update, in the Header Record provide a new Header History Sequence Number that is lower than last submission. In the Container Summary File provide Container Summary File Status = U. In the Segment File (SEG) provide SEG Record Status = U for all segments submitted. All other values should be the same as last submission. If a value is changed from the last submission and it is not one of the allowed fields listed below, the Mail.dat file is not accepted. If you don't intend to change a value in one of the fields that can be changed, include the value previously submitted.

For a transportation update, include in the Container Summary File (CSM) all parent, child and sibling records to be updated. For sibling records, the only value that can be changed other than CSM Record and Container statuses are Label: IM Container or IM Tray Barcode. All other fields must have the same values as in the last submission. The validator will accept files that have changes to non-Transportation Update fields. These field changes will be ignored and only allowable Transportation Update fields will be updated in *PostalOne!*

If this creates difficulties, the alternative method to a transportation update is to use the ContainerUpdateRequest Mail.XML message to do the update instead. With Mail.XML, only the changed fields need to be sent.

A Transportation Update job will be rejected if it is submitted more than 30 days after the CSM Postage Statement Mailing Date.

Table 4-32 lists the fields that can be changed in a transportation update.

CSM Field Name	Notes:
CSM Record Status	Must be U
Container Status	Must be T
Label: IM Container Or IM Tray Barcode	Only field that can be changed on Sibling records
Label: 10-Character Container Barcode	
Display Container ID	
Reservation Number	
Scheduled Induction Date	If Full-Service or Mixed, must be populated if Reservation Number is populated. Dates must be within 30 days (past or future) of the Postage Statement Mailing Date for a Full-Service mailing.

CSM Field Name	Notes:
Scheduled Induction Time	If Full-Service or Mixed, must be populated if Reservation Number is populated
USPS Pick Up Indicator	
Scheduled Ship Date	If Full-Service or Mixed, must be populated if USPS Pickup Indicator=Y. Dates must be within 30 days (past or future) of the Postage Statement Mailing Date for a full-service mailing.
Scheduled Ship Time	If Full-Service or Mixed, must be populated if USPS Pickup Indicator=Y
CSA Separation ID	
FAST Scheduler ID	
FAST Content ID	
Entry Point - Actual / Delivery - Locale Key	
Entry Point - Actual / Delivery - Postal Code	
Stop Designator	
Truck or Dispatch Number	
eInduction Indicator	
Accept Misshipped	

Table 4-40 Allowable CSM Transportation Update Values

4.5.3.1 eInduction Indicator Update

Similar to a Transportation Update, the CSM eInduction Indicator field can be updated with the ContainerUpdateRequest Mail.XML message. The eDoc Submitter can use this message to update the eInduction Indicator from N to Y or Y to N. A third party can use this message to update the eInduction Indicator from N to Y. The eInduction Indicator is the only field a third party will be allowed to update. An update to the eInduction Indicator can occur independently of the CSM Container Status.

4.5.4 Rules for Sending Header Status Updates

The Delete Job Transaction

You can close a mailing job (i.e., containers canceled) by sending a delete file. This signals that the product, for whatever reason, is no longer going to mail.

A delete file is composed of a header file and a segment file. The segment file specifies the individual facility using the Mail Facility ID (CRID) field affected. Only one Mail Facility ID is allowed in a Mail.dat Job ID.

The Change Job Transaction

If the File Status fields in the header file for a Mail.dat job are set to C, the job is considered a Change job. Per the Mail.dat File Specification, available change actions are Insert and Update, based on the values contained in the record level status flags. Although the specification includes support for the Delete flag, the *PostalOne!* system only supports the I, O, and U flags.

If the Primary MPA ID in the MPU/Component Relationship (MCR) file of an update job is different from the original MPA ID, the new MPA ID must match the MPU – Unique Sequence/Grouping ID (positions 9-18) in the Mailer Postage Account (MPA) file of the first submission (original or preliminary).

Replace Job Transactions

A Mail.dat job may be replaced by sending a delete transaction then resubmitting the same job.

To use the *PostalOne!* system, mailers must use file/record level status flags for all Mail.dat files. Table 4- below lists the file/record level status flags allowed by the system for each transaction type.

Mail.dat Transaction Type	File Level Status	Record Level Status	Required Files (Minimum)
---------------------------	-------------------	---------------------	--------------------------

Mail.dat Transaction Type	File Level Status	Record Level Status	Required Files (Minimum)
Original	All flags must be set to O.	All flags must be set to O.	HDR, SEG, MPU, MCR, MPA, CPT, CSM, CQT, PQT
Delete	All flags must be set to D.	All flags must be set to D.	HDR, SEG
Replace	Not supported by the <i>PostalOne!</i> system.	Not supported by the <i>PostalOne!</i> System.	Not supported by the <i>PostalOne!</i> system.
Change	All flags must be set to C.	All flags must be set to either I or U.	HDR, SEG
Update	All flags must be set to U.	All flags must be set to U.	HDR, SEG

Table 4-41 File and Record Level Status Values

The Mail.dat file structure is validated for the different Mail.dat transaction types, as follows:

- The file level status flags must be consistent for a given Mail.dat transaction. For example, for an original transaction, all file level status flags in the header record must be set to O. If some optional files are not included in the original transaction, the record count for those files must be zero. Similarly, for update or change or delete transactions, all file level status flags must be set to U, C, or D respectively.
- Original transactions – For original Mail.dat transactions, the Mail.dat file structure is verified based on the presentation category, as described above. A PDR or PBC file has to be present in the Original transaction for a full-service or mixed full-service and non-full-service mailing.
- Update transactions – For all update transactions, the Header and the Segment files are required. All other files are optional. However if sending the CSM that is not a sibling container then the CQT and PQT are required. In the case of full-service, if sending the CSM if not a sibling container, the PDR is required.
- For entry level and zone optimization that occurs after sending the Mail.dat file with container status original to generate the qualification report, it is not possible to do a CQT insert. Coordinate with the acceptance office to arrange timing for the original submission after the entry level and zone optimization or cancel the original job and resend it. If there is a FAST appointment involved on the original job be sure to include the Container Summary fields Reservation number, FAST Content ID, and Scheduled Induction Date in the update job.
- Change transactions – For change transactions, the Header and the Segment files are required. All other files are optional.
- Delete transactions – Two types of delete transactions are supported by the *PostalOne!* system.
- To delete a complete job (including all segments of the job), a Header and a Segment file must be sent, referencing the Mailing facility ID within the job. The system will allow the deletion of a Mail.dat job only in the cases where there are no postage statements in the statuses: PAV, AVW, FAI, PAS, PEN, COM, FIN, FPP, and UPD. The postal clerk may finalize and then reverse the postage statements in order to allow the deletion of the job.
- Any time a container is part of a deleted job, the IM barcodes (container or tray) cannot be reused for 45 days from the time the delete transaction was submitted.

4.6 Postage Statement Statuses

Table 4-33 lists the postage statement statuses and the expected action from the Postal Service unless otherwise stated.

Stage	Definition	Action
AVW	Address verification resulted in warnings.	Verify cost avoidance amounts and then finalize the postage statement.
CAN	A mailer canceled the postage statement.	None. View only.
CON	This statement is part of a consolidated postage statement and cannot be individually updated.	None. View only. Any actions must be performed on the statement that contains the consolidated statements.
ERR	A USPS clerk was unable to finalize a statement due to a system error.	None. View only.
EST	The postage is an estimate based on preliminary postage data, not an actual postage statement. This is only available for postage statements submitted by mailers using Mail.dat files.	Mailers must update the file to complete postage statement entry or cancel the mailing.
FAI	The postage statement failed verification.	Look up the statement on the Dashboard and enter the disposition of the failed statement, such as whether it was sent to rework, additional postage collected, and so on.
FIN	The postage statement has been finalized.	None. View only.
FPP	Finalized Pending Payment	This job status set when the clerk finalizes postage and is only for Periodicals CPP customers. It will be changed to FIN status by a payment request or 28 days after the first day of mailing.
INC	Postage statement entry is incomplete - initial entry was interrupted.	Look up the statement on the Dashboard and complete it.
NAP	The statement is not available for processing by the system. This usually indicates a type of postage statement not supported.	None. View only.
PAS	The postage statement passed MERLIN verification, but was not finalized at the machine.	Finalize the postage statement.
PAV	The postage statement is pending address verification.	Finalize the postage statement. If necessary to finalize without waiting for verification, select the check box to skip address verification when entering verification results.
PEN	The postage statement is pending finalization.	Finalize the postage statement.
QMR	A postal employee has performed a Quality Mail Review. The QMR stage only appears on a verification receipts entered by postal employees and does not affect postage statements submitted electronically.	None. View only.
REV	A postal employee has reversed the postage statement transaction.	None. View only.
REW	A verification issue has been identified and the mailing has been returned to the mailer for correction or rework.	None. Mailing must be re-entered as a new postage statement once issues have been corrected.
UPD	A file has been received and a postage statement is available for processing (USPS Processing is Due).	If verification is required, look up the statement on the Dashboard, and initiate verification. If no verification is required, finalize the postage statement.

Table 4-42 Postage Statement Statuses

5. Mail.dat Field Validation

This section contains the field validations the *PostalOne!* system enforces for Mail.dat file submissions, separated by the record containing the field(s). Although very close, these are not identical validations to the Mail.dat IDEAlliance specifications; rather, this is how the *PostalOne!* system validates the fields.

The following conventions will apply for each data type in the respective fields as indicated, except as noted in specific record layouts.

Alphanumeric = The recommendation is to left-justify these fields, and fill the right with spaces. Some fields do not allow special characters (letters and numbers only). The number sign # is reserved as a closing character, except for use in the .upa Address field. Most fields labeled alphanumeric accept uppercase letters, lowercase letters, and numbers plus the characters in Table 5-1.

Hex	Symbol	Description	Hex	Symbol	Description
20		Space	3B	;	Semicolon
21	!	Exclamation Point	3C	<	Less Than Sign
22		Double Quotes	3D	=	Equal Sign
24	\$	Dollar Sign	3E	>	Greater Than Sign
25	%	Percent Sign	3F	?	Question Mark
26	&	Ampersand	40	@	At Symbol
27		Single Quote	5B	(Opening Bracket
28	(Opening Parenthesis	5C	\	Backslash
29)	Closing Parenthesis	5D)	Closing Bracket
2A	*	Asterisk	5E	^	Caret - Circumflex
2B	+	Plus Sign	5F	_	Underscore
2C	,	Comma	60	`	Grave Accent
2D	-	Minus Sign - Hyphen	7B	{	Opening Brace
2E	.	Period	7C		Vertical Bar – Currently Unsupported
2F	/	Slash	7D	}	Closing Brace
3A	:	Colon	7E	~	Equivalency Sign – Tilde

Table 5-1 ASCII Symbols Allowed

Numeric – The recommendation is to right-justify these fields, and fill the left with zeroes. For example, 123 should be 00123. The *PostalOne!* system will accept some numeric fields without leading zeroes. In this case do not use the same value with and without leading zeroes (e.g., 00123 and 123) for the same field in the same job or in subsequent transmissions because the *PostalOne!* system considers these to be two different values and will in some cases block update jobs or create extra postage statements for key postage statement generation fields.

Numeric Decimal – For some fields, a decimal place is automatically added to the field. Fill smaller numbers with zeroes if necessary to place the decimal in the correct location. For these fields, this technical specification uses the letter v to indicate where the decimal appears. For example, to fit in a field marked as 99v9999, the value 1.23 should be 012300.

If a field does not require the use of conventional values and is not used in the mailing, then use a space-filled field.

Note: Fields marked with a single asterisk (*) are required by the *PostalOne!* system, in addition to the fields required by the Mail.dat specification. Fields marked with multiple asterisks indicate a special note at the end of the table. Every file record has a closing character # that must be in the position specified by the Mail.dat specification and there must be no further characters after the closing character.

5.1 Header Record (HDR)

Header Record (HDR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	If numeric only, fill left with zeroes. No special characters allowed. The Job ID Field is user managed and must remain unique within one user license code. <i>PostalOne!</i> does not support updates of this field, only one Job ID is allowed in a Mail.dat file.
IDEAlliance Version	Alphanumeric	Required	14-1,14-2
Header History Sequence Number	Numeric	Required	Required to be unique for subsequent submission of the same job number. <i>PostalOne!</i> does not support updates of this field; Change the Current Active Header record to change the Header History Sequence Number.
Header History Status	C, H	Required	There must be one current C header record present for a job in a HDR file. All history H records will be ignored
Historical Job ID	Alphanumeric	Required	If numeric only, fill left with zeroes.
Licensed Users Job Number	Alphanumeric		The Licensed User's internal Job Number
Job Name/Title & Issue	Alphanumeric	Required	Applicable Job, Title-Issue, Campaign Name or description
File Source	Alphanumeric	Required	Name of the originator supplying the files
User License Code	Alphanumeric	Required	Required by the <i>PostalOne!</i> system. The Postal Service systems treat the User License Code or provider code as case sensitive. Must begin with an alpha code and may not have spaces or special characters.
Contact Name	Alphanumeric	Required	Originator of File
Contact Telephone Number	Telephone Number	Required	No 000 area codes. Must have 10-digits. Example: 9999999999
Contact Email	Alphanumeric	Required	Email address of who created the iteration of Mail.dat
Date Prepared	Date	Required	yyyymmdd - Example: 20061225 (cannot be all zeroes)
Time Prepared	Time	Required	HH:MM – Example: 13:30
Segment Record Count	Numeric	Required	Must match the record count of the Segment file.
Segment File Status	O,C,D,U,N	Required	O,D, N describes action upon an entire field, C and U indicate individual records only are modified
Mail Piece Unit Record Count	Numeric	Required	Must match the record count of the Mail Piece Unit file.
Mail Piece Unit File Status	O,C,D,U,N	Required	Must be populated with N or O if the Mail Piece Unit file is not included. If populated with O the record count must be greater than 0.
MPU / C Relationship Record Count	Numeric	Required	Must match the record count of the MPU/C Relationship file.
MPU / C Relationship File Status	O,C,D,U,N	Required	Must be populated with N or O if the MPU / C file is not included. If populated with O the record count must be greater than 0.
Mailer Postage Account Record Count	Numeric	Required	Must match the record count of the Mailer Postage Account file.
Mailer Postage Account File	O,C,D,U,N	Required	Must be populated with N or O if the Mailer

Header Record (HDR)			
Field	Acceptable Values	Required	Notes
Status			Postage Account file is not included. If populated with O the record count must be greater than 0.
Component Record Count	Numeric	Required	Must match the record count of the Component file.
Component File Status	O,C,D,U,N	Required	Must be populated with N or O if the Component file is not included. If populated with O the record count must be greater than 0.
Component Characteristic Record Count	Numeric	Required	Must match the record count of the Component Characteristics file.
Component Characteristic File Status	O,C,D,U,N	Required	Must be populated with N or O if the Component Characteristics file is not included. If populated with O the record count must be greater than 0.
Container Summary Record Count	Numeric	Required	Must match the record count of the Container Summary Record file.
Container Summary File Status	O,C,D,U,N	Required	Must be populated with N or O if the Container Summary file is not included. If populated with O the record count must be greater than 0.
Container Quantity Record Count	Numeric	Required	Must match the record count of the Container Quantity Record file.
Container Quantity File Status	O,C,D,U,N	Required	Must be populated with N or O if the Container Quantity file is not included. If populated with O the record count must be greater than 0.
Package Quantity Record Count	Numeric	Required	Must match the record count of the Package Quantity Record file.
Package Quantity File Status	O,C,D,U,N	Required	Must be populated with N or O if the Package Quantity file is not included. If populated with O the record count must be greater than 0.
Walk Sequence Record Count	Numeric	Required	Must match the record count of the Walk Sequence Record file. Must be present for Rate Category field in the CQT record is set to A (Saturation-ECR)
Walk Sequence File Status	O,C,D,U,N	Required	Must be populated with N or O if the Walk Sequence file is not included. If populated with O the record count must be greater than 0. Must be present for Rate Category field in the CQT record is set to A (Saturation – ECR)
Seed Name Record Count	Numeric	Required	Not supported by PostalOne!
Seed Name File Status	O,C,D,U,N	Required	Not supported by PostalOne!
IJ / C Relationship Record Count	Numeric	Required	Not supported by PostalOne!
IJ / C Relationship File Status	O,C,D,U,N	Required	Not supported by PostalOne!
Piece Detail Record Count	Numeric	Required	Must match the record count of the Piece Detail Record file.
Piece Detail File Status	O,C,D,U,N	Required	Must be populated with N or O if the Piece Detail file is not included. If populated with O the record count must be greater than 0.
Piece Barcode Record Count	Numeric	Required	Must match the record count of the Piece Barcode Record file.
Piece Barcode File Status	O,C,D,U,N	Required	Must be populated with N or O if the Piece Barcode file is not included. If populated with O the record count must be greater than 0.

Header Record (HDR)			
Field	Acceptable Values	Required	Notes
Special Fee/Charge Record Count	Numeric	Required	Must match the record count of the Special Fee/Charge file.
Special Fee/Charge File Status	O,C,D,U,N	Required	Must be populated with N or O if the Special Fee/Charge file is not included. If populated with O the record count must be greater than 0.
Postage Adjustment Record Count	Numeric	Required	Must match the record count of the Postage Adjustment Record file.
Postage Adjustment File Status	O,C,D,U,N	Required	Must be populated with N or O if the Postage Adjustment file is not included. If populated with O the record count must be greater than 0.
Original Container Identification Record Count	Numeric	Required	Required for copalletization. Must match the record count of the Original Container Identification Record.
Original Container Identification File Status	O,C,D,U,N	Required	Required for copalletization. Must be populated with N or O if the Original Container Identification file is not included. If populated with O the record count must be greater than 0.
Un-Coded Parcel Address Record Count	Numeric	Required	Must match the record count of the Un-Coded Parcel Address file.
Un-Coded Parcel Address File Status	O, C, D, U, N	Required	Must be populated with N or O if the Un-Coded Parcel Address file is not included. If populated with O the record count must be greater than 0.
Special Fee/ Charge Barcode Record Count	Numeric	Required	Not supported by PostalOne!
Special Fee/Charge Barcode Status	O, C, D, U, N	Required	Not supported by PostalOne!
Mail.dat Presentation Category	P, M, C, E, N	Required	Use P for presort, M for MLOCR and C or E for Consolidated Internal/External Copal job with linked logical and presort mailings, N for Priority Mail. There must be one and only one Segment ID if the Header Mail.dat Presentation category is M. Use M to receive VAR/CVAR refund transaction.
Original Software Vendor Name	Alphanumeric	Required	Originator company name of this Mail.dat
Original Software Products Name	Alphanumeric	Required	Originator product name of this Mail.dat
Original Software Version	Alphanumeric	Required	Originator software version of this Mail.dat
Original Software Vendors Email	Alphanumeric	Required	Originator software company email address
Mail.dat Software Vendor Name	Alphanumeric	Required	In-house proprietary software, transmitting agent, name of author
Mail.dat Software Products Name	Alphanumeric	Required	Name of product
Mail.dat Software Version	Alphanumeric	Required	Version of software creating the transmitted Mail.dat
Mail.dat Software Vendors Email	Alphanumeric	Required	Email address of party creating product name above
Software Vendors ZAP Option	Numeric	Required	Required for Periodicals with original or preliminary container status. This differs from the Mail.dat specification.
Zone Matrix Date	Numeric		YYYYMMDD

Header Record (HDR)			
Field	Acceptable Values	Required	Notes
eDoc Sender Crid	Alphanumeric		
Information Exchange	Alphanumeric		
User Option Field	Alphanumeric		
Closing Character	#	Required	Required. No characters are permitted after the closing character.

Table 5-2 Header Record - HDR

5.2 Segment Record (SEG)

Segment Record (SEG)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header Record.
Segment ID	Alphanumeric	Required	If numeric only, fill left with zeroes. There must be at least one Segment ID. There must be one and only one Segment ID if the Header Mail.dat Presentation category is M. <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Segment Description	Alphanumeric		Describe string; EX: Spring - Remail
Class Defining Preparation	1,2,3,4,6	Required	1 = First Class 2 = Periodicals 3 = Standard Mail 4 = Package Services 6 = Std/Periodicals Co –Mailings For Pending Periodicals, use 2. Must also populate Principal Processing Category.
Principal Processing Category	LT, FL, CD, CM, IR, MP, PF, NP	Required	Describes the physical processing category the mail piece qualify for. Must also populate Class Defining Preparation. Must contain same value as .mpu Processing Category. Principal Processing Category is validated by class as follows. First-Class Mail: LT, FL, CD, PF, MP, IR, NP Periodicals: LT, FL, IR, MP, NP Standard Mail: LT, FL, MP, IR, NP, CM Package Services: FL, MP, IR, NP
Substituted Container Prep	S,T		Denotes if an alternate container is used for preparation and submission of mailing. Ex: Sacking an automated letter.
Periodicals Newspaper Treatment	Y,N		If Periodicals publications are eligible for “Newspaper” handling
Logical/Physical Container Indicator	L,P	Required	Indicates Logical or Physical containers types in the .csm. When populated with L at least one container must be logical. When populated with P no container type can be logical.
Log/Phy Package Indicator	L,P	Required	Indicates Logical of Physical container

Segment Record (SEG)			
Field	Acceptable Values	Required	Notes
LOT Database Date	Date	Required	YYYYMMDD (cannot be all zeroes) - Example: 20130127. Note: Fill with 00010101 if no date available; lack of a valid date may impact rate eligibility.
Verification Facility Name	Alphanumeric	Required for the <i>PostalOne!</i> system.	Name of mailing facility where verification occurs
Verification Facility ZIP+4	Numeric	Required for the <i>PostalOne!</i> system.	Fill with the ZIP Code + 4 without a hyphen. Example: 123451234. The facility at this ZIP Code.
L.O.T. Direction Indicator	F,R		
Barcode Verifier Indicator	Y,N	Conditionally required	Required for MLOC Presentation Category.
Package Services Packaging Criteria	PC,PD,CB	Optional	
Automation Coding Date	Date	Required	YYYYMMDD - Example: 20140127. Fill with 00010101 if no date available or no automation mail; lack of a valid date may impact price eligibility. The system will validate that Automation Coding Date cannot be more than 180 calendar days before the .csm Postage Statement Mailing Date for Non-Carrier Route Mail (CQT Rate Category is E, H, L, L1, L2, L3, or L4). The system will validate that Automation Coding Date cannot be more than 90 calendar days before the .csm Postage Statement Mailing Date for Carrier Route Mail (CQT Rate Category is A, B, D, AF, BF, DF, or O). In the case of multiple dates, the system will use the oldest date that is not the default date of 00010101.
Carrier Route Coding Date	Date	Required	YYYYMMDD - Example: 20140127. Fill with 00010101 if no Carrier Route Mail. In the case of multiple dates, the system will use the oldest date that is not the default date of 00010101.
Carrier Route Sequencing Date	Date	Required	YYYYMMDD - Example: 20140127. Fill with 00010101 if no Carrier Route Mail. In the case of multiple dates, the system will use the oldest date that is not the default date of 00010101.
Move Update Date	Date	Conditionally required	Required for Move Update Method values 1, 2, 3, and 5. YYYYMMDD - Example:20140127. If not applicable use 00010101

Segment Record (SEG)			
Field	Acceptable Values	Required	Notes
Detached Mailing Label Indicator	A, B, Blank		A = Detached Address Label, B = Detached Marketing Label, Blank = Not Applicable Detached Address Labels are supported for Mail.dat Standard Mail Enhanced Carrier Route Flats and Parcels postage statements for the following Class, Processing Category and Rate Category combinations: Class: Standard Mail Processing Category: FL = Flats, IR = Irregular Parcels, MP = Machinable Parcels Rate Category: A = Saturation ECR, B = High Density ECR, D = Basic ECR Class: Bound Printed Matter, Processing Category: FL = Flats
eDoc Sender CRID	Alphanumeric	Required by the PostalOne! system	This USPS-assigned id, CRID, will be used by the USPS to uniquely identify the submitter of electronic documentation to the <i>PostalOne!</i> system. This field will be used to identify eDoc submitter, which may be different from the mail preparer, mail owner, and scheduler roles. Use only numeric characters, left justify and do not add leading zeroes. The Mail Facility ID or eDoc Sender CRID must be a valid CRID associated to the user account that uploaded the file This field must be the same across all records in the .seg file.
Container and Bundle Charge Method	1,2,3,0	Required	For periodicals populate with a non zero value. For all non-periodicals populate with zero. 0 = Non-periodicals 1 = Charge all to a 3 rd Party 2 = Charge all to one of the publications 3 = Charge proportionately by copies to each of the publications
MPA ID for Container and Bundle Charge Method	Alphanumeric		Only enter if Container and Bundle Charge Method is 1 or 2. This ID should match the MPA - Unique Sequence/Grouping ID in the MPA file. Container and Bundle Charge Method 1 is not fully supported and requires manual entry of a container and bundle statement for the third party payer; in this case the MPA ID for Container and Bundle Charge Method is ignored.
Less Than a Presort Segment Presentation	Y,N		If this field is Y for Periodicals, the CQT container allocation and PQT bundle allocation fields are used to calculate container and bundle charges.

Segment Record (SEG)			
Field	Acceptable Values	Required	Notes
Full-service Participation Indicator	F,M, blank		For values F or M a PDR file is expected to document the all mailpieces in the job. The <i>PostalOne!</i> system validates: (1) that a job containing all full-service mailpieces (SEQ Full-Service Participation Indicator value F) contains all full-service mailpieces (all CQT Service Level Indicator values are F); (2) that a job containing a mixture of full-service mailpieces with non-full-service mailpieces (SEQ Full-Service Participation Indicator value M) contains at least one full-service mailpiece (one CQT Service Level Indicator with value F); (3) that a job containing all non-full-service mailpieces (SEQ Full-Service Participation Indicator value blank) contains no full-service mailpieces (no CQT Service Level Indicator with value F).
Move Update Method	0,1,2,4,5,6,7, 8		Populate only for First Class or Standard Mail with presorted or automation prices.
Delivery Statistics File Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) Date when the Delivery Statistics file was used for reporting on the postage statements. In the case of multiple delivery statistics file dates, the oldest date should be used for populating this field. Whenever this field is populated with a value other than 00010101, before finalizing the postage statement, the acceptance personnel will be required to populate a new field for number of pieces of mail bearing a simplified address.
Information Exchange	Alphanumeric		This field is for the exchange of private information between sender and catcher.
User Option Field	Alphanumeric		Available for customer data for unique user application
Mailing Agreement Type	Alphanumeric		
Bypass Seamless Acceptance	Y, Blank		Y = Yes; Blank = No This field will allow a mailer to indicate a mailing that does not meet the criteria for Seamless Acceptance from a facility that participate under normal circumstances.
FCM Letter Residual Preparation Indicator	M, blank		M = Mixed (the statements in the segment have residual pieces with less than or equal to 2 ounces) Blank = Separated or Not applicable (if the statements in the segment have residual pieces with less than or equal to 2 oz then they are separated in containers/trays; otherwise this field is not applicable)
SEG Record Status	O,D I,U	Required	
Reserve	Alphanumeric		

Segment Record (SEG)			
Field	Acceptable Values	Required	Notes
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-3 Segment Record - SEG

5.3 Mail Piece Unit (MPU)

Mail Piece Unit (MPU)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header
Segment ID	Alphanumeric	Required	Must match Seg ID of Segment. The Segment ID and Mail Piece Unit ID combination of a MCR record must match a Segment ID and Mail Piece Unit ID combination in a MPU record.
Mail Piece Unit ID	Alphanumeric	Required	Must be unique within a job. If numeric only, fill left with zeroes. Must have a corresponding MCR record. There must be at least one Mail Piece Unit ID for each Segment ID. For HDR Presentation category value MLOCR, there must be an MPU ID corresponding to each CQT file record having Mail Piece Unit - Class value 1 Mail Piece Unit – Processing Category value LT, Mail Piece Unit - Class value 1 Piece Unit – Processing Category value CD or Mail Piece Unit - Class value 3 Piece Unit – Processing Category value LT. The Segment ID and Mail Piece Unit ID combination of a MCR record must match a Segment ID and Mail Piece Unit ID combination in a MPU record. <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Mail Piece Unit Name	Alphanumeric	Required	Must be unique within a segment.
Mail Piece Unit Description	Alphanumeric		Unique name for each specific version created in the mailing
Mail Piece Unit – Weight	Numeric Decimal	Required	99v9999 (decimal point implied) Weight of a copy Used to calculate postage
MPU - Weight: Source	A,P,C,L	Required by the <i>PostalOne!</i> system.	
MPU - Weight: Status	M,P,F,N	Required	
Mail Piece Unit - Length	Numeric Decimal		999v9999 (Decimal point implied) Length of a copy. If MPU Surcharge is D, then this field must contain a valid non-zero value.
Mail Piece Unit - Width	Numeric Decimal		99v9999 (Decimal point implied) Width of a copy. If MPU Surcharge is D, then this field must contain a valid non-zero value.
Mail Piece Unit - Thickness	Numeric Decimal		99v9999(Decimal point implied) Thickness of a copy If MPU Surcharge is D, then this field must

Mail Piece Unit (MPU)			
Field	Acceptable Values	Required	Notes
			contain a valid non-zero value.
Mail Piece Unit - Class	1,2,3,4,5	Required	If populated MPU - Rate Type and MPU – Processing Category must be populated.
Mail Piece Unit - Rate Type	R,C,P,L,S,B,F,N, ,D,W,Y,E,E1,E2, E4,E5,E6,E7,E8, E9,O,J,K,T,T1,T2 ,T3,T4,T5	Required	If MPU - Class is populated, First-Class Mail: R Periodicals: R, N, S, C, W, Y Standard Mail: R,N Package Services: B, P, L, F, D Priority Mail: E, E1, E2, E4, E5, E6, E7, E8, E9, O, J, K, T, T1, T2, T3, T4, T5 <i>The .mpu Rate Type will not be used as a postage statement generation variable when the .hdr Presentation Category is N = Single Piece for Priority Mail.</i>
Rate Schedule	P, N, R, blank		Use P for Commercial Plus, blank for Commercial Base. Do not use NSA.
Mail Piece Unit - Processing Category	LT,FL,CD,MP,IR, OS, PF,CM, NP	Required	First-Class Mail: LT, CD, FL, PF, MP, IR, NP Periodicals or Pending Periodicals: LT, FL, IR, MP, NP Standard Mail: LT, FL, MP, IR, NP, CM Package Services: LT, FL, IR, MP, NP Must be the same as the .seg Principal Processing Category.
MPU Surcharge	N,O,P,Q,R,S,1,2, D	Required	If MPU Surcharge is D, then MPU Length, MPU Width, and MPU Thickness must contain valid non-zero values.
Co-Palletization Code	Alphanumeric	Required	
Flat Machinability	Y, U, N, blank	Conditionall y Required	For Periodicals, if Mail Piece Unit – Processing Category is FL, this field is required and impacts prices. For more information, see the Flat Machinability Values table.
Pre-Denominated Amount	Numeric		9999v9 (decimal point implied) For Postage Affixed
Postage Affixed Type	S,M		Postage Affixed Type field cannot be populated when the .mpa Postage Payment Method is populated with P = Permit
Standard Parcel Type	M, F, S, L, Blank		
User Option Field	Alphanumeric		Customer data for unique user application
MPU Record Status	O,D I, U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-4 Mail Piece Unit - MPU

5.3.1 Mail Piece Unit – Class Values

The *PostalOne!* System supports the following mail classes (Mail Piece Unit – Class in the MPU file) for electronic data submission:

Value	Class
1	First-Class Mail
2	Periodicals
3	Standard Mail
4	Bound Printed Matter, Library Mail and Media Mail are supported. .
5	Pending Periodicals
6	Combined Mail of Periodicals and Standard Mail Flats

Table 5-5 Supported Mail Piece Unit - Class Values

5.3.2 Mail Piece Unit – Flat Machinability Values for Periodicals Mailings

For Periodicals mailings, Flat Machinability (MPU) values map to the following presort levels and piece prices.

Nonmachinable Flat Size Periodicals claim a Machinable piece price for 5-Digit Barcoded. Otherwise, follow the Nonmachinable and Parcels prices.

Periodicals parcels claim the Nonbarcoded Nonmachinable piece prices on the Parcels lines.

Value	Presort Level	Piece Prices
Y	All	Machinable Flats
U	3-Digit, ADC, Mixed ADC	Nonmachinable Flats
U	5-Digit Barcoded	Machinable Flats
N	All	Parcels
Blank	All	None. Error message occurs if Flat Machinability is blank in a Periodicals mailing with Processing Category FL.

Table 5-6 Flat Machinability Values for Periodicals

5.4 MPU/C Relationship Record (MCR)

MPU/C Relationship Record			
Field	Acceptable Values	Required.	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
Segment ID	Alphanumeric	Required	Must match Seg ID of Segment. The Segment ID and Mail Piece Unit ID combination of a MCR record must match a Segment ID and Mail Piece Unit ID combination in a MPU record.
Mail Piece Unit ID	Alphanumeric	Required	Must match MPU ID of MPU. Must have an MCR for every MPU ID and Segment ID.
Component ID	Alphanumeric	Required	Must match CPT ID of CPT. Must have an MCR for every CPT.
Primary MPA ID	Alphanumeric	Required	Must match the MPA - Unique Sequence/Grouping ID in the MPA file. For each component record that has a container status of R (Ready to Pay), a class defining preparation of 2 (Periodicals), and a component class/component rate type of 1 (First-Class)/R (Regular), 3 (Standard)/R (Regular), or 3 (Standard)/N (Nonprofit) the MCR Primary MPA ID must be provided and must have a valid Permit Number and a valid Postage Payment Method in the MPA file.
Additional Postage MPA ID	Alphanumeric		For metered or precanceled stamp postage, <i>PostalOne!</i> validation requires an MPA file detailing the permit to be charged for additional postage. The additional postage MPA ID must be used in the Additional Postage MPA ID field of the MCR file. Additional postage may only be charged to a permit imprint account.

MPU/C Relationship Record			
Field	Acceptable Values	Required.	Notes
Host Statement Component ID	Alphanumeric	Conditionally Required	Required when a Mail Piece Unit ID is associated to multiple Component IDs within the .mcr file. If numeric only, fill left with zeroes. The Host Statement Component ID must have a matching Component ID in the CPT file and is required to be populated for the following scenarios Multiple Hosts: For Periodical Co-Mailings, there will be multiple hosts within the same MPU. The incidentals must reference the correct Host Statement Component ID. Non-Incidental and Incidental Enclosures: If there is a non-incidental enclosure (the non-incidental enclosure is its own host) and one or more incidental enclosures, the incidental enclosures must reference the appropriate Host Statement Component ID. Periodicals Ride-Along appears with more than one host Periodical. See Full-service Data Distribution - PDR File Option using Component record.
Host Indicator of Ad Computation	Y,N, blank		
Postage Adjustment MPA ID	Alphanumeric		Must match the MPA - Unique Sequence/Grouping ID containing the permit imprint account used to pay for adjusted postage
MCR Record Status	O,D,I,U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-7 MPU/C Relationship Record – MCR

5.5 Mailer Postage Account Record (MPA)

Mailer Postage Account Record			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
MPA - Unique Sequence/Grouping ID	Alphanumeric	Required	If numeric only, fill left with zeroes. Must match to MCR record Primary MPA ID or Additional Postage MPA ID or Postage Adjustment MPA ID. This sequence number is not the sequence number on the postage statement (a system generated number.) <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
MPA - Description	Alphanumeric		
USPS Publication Number	Alphanumeric	Required	Mutually exclusive with Permit Number field. Use only for Periodicals mailings. Do not use for Pending Periodicals. The USPS Publication Number must be active at the Post Office location designated by the required Permit ZIP +4. The Postage Payment Method is required. This Publication Number at the finance number inferred from the MPA Permit ZIP+4 must have the postage authorizations required in the Component - Rate Type or Mail Piece Unit – Rate Type. The USPS Publication Number cannot contain leading zeroes.

Mailer Postage Account Record			
Field	Acceptable Values	Required	Notes
Permit Number	Alphanumeric	Required	<p>Mutually exclusive with Publication Number field. Use for all non-Periodicals, including Pending Periodicals. The permit must be active at the Post Office location designated by the required Permit ZIP + 4. The Postage Payment Method is required. This permit number at the finance number inferred from the MPA Permit ZIP+4 must have the postage authorizations required in the Component - Rate Type or Mail Piece Unit – Rate Type. In the case of a non-incidental enclosure in the Periodicals class, for each container record that has a container status of R (Ready to Pay), a Seg class defining preparation of 2 (Periodicals), and a component class/component rate type of 1 (First-Class)/R (Regular), 3 (Standard)/R (Regular), or 3 (Standard)/N (Nonprofit) the MCR Primary MPA ID must be provided and must have a valid Permit Number and a valid Postage Payment Method in the MPA file.</p> <p>Permit Number is not unique. Permit Number, Permit Type and Permit ZIP + 4 is unique.</p> <p>Permit Number cannot contain leading zeroes.</p>
Permit ZIP+4	Alphanumeric	Required	<p>All Mailer Postage Account (MPA) records must have a value in the Permit ZIP+4/Postal Code field. The Permit ZIP+4 value must be the ZIP Code associated with the Post Office location where the permit is held or the original or additional entry office where the USPS Publication Number is held.</p> <p>The <i>PostalOne!</i> system requires the Permit ZIP+4 field as part of the information necessary to uniquely identify a Permit number or USPS Publication Number at a Post Office location. For the <i>PostalOne!</i> system to complete an end-to-end transaction, Permit ZIP+4 information must be included with all postage transactions. Mail.dat validation use the first finance number found.</p>
Mail Owners Lcl Permit Ref Num / Int.l Bill Num	Alphanumeric		<p>If populated, determines nonprofit authorization for Standard Mail. This field will generate separate postage statements for each owner in the case that a single permit holder is paying postage for several mail owners that are different from the permit holder. Mail Owners Lcl Permit Ref Num / Int.l Bill Num cannot contain leading zeroes.</p>
Mail Owners Lcl Permit Ref Num/ Int.l Bill Num - Type	S,M,P,G,V,H	Required	<p>Used to determine the permit type for the Mail Owners Lcl Permit Ref Num / Int.l Bill Num. (V is for a ghost permit type GH; G is for permits that pay via the Official Mail Accounting System OMAS.) See the Full-service Data Distribution.</p>
Postage Payment Option	C,D,V,O,T,B		
Customer Reference ID	Alphanumeric		The system will accept up to 999 Customer Reference IDs in a Job.

Mailer Postage Account Record			
Field	Acceptable Values	Required	Notes
Postage Payment Method	S,M,P,C,L,I,G,T	Conditionally Required	Only required if Permit Number or Publication Number is present. Used to infer permit type except when USPS Publication Number is selected and permit type is set to PE. The Postage Payment Method must be set to P when the Class is 4 for Package Services and the Rate Type is B for Bound Printed Matter. The Postage Payment Method must be set to P for a Mail.dat job that includes Permit Reply Mail. Select T when the Class is 5 for Pending Periodicals. Postage Affixed: For Postage Payment Methods S=Stamp and M=Metered Neither the MPU Pre-Denominated Amount is the amount of postage affixed. For postage payment L=Metered Lowest, all pieces must be identical weight and the lowest price piece in the mailing is the calculated amount of postage affixed. For postage payment method C=Metered Correct, the correct price is the calculated amount of postage affixed and no postage is due.
Federal Agency Cost Code	Alphanumeric		This five-digit field may include leading zeroes, is optional, and displays on the postage statements for Official Mail. The Federal Agency Code is a three-digit field required for Official Mail and is located on the Permit Number record at the acceptance office in <i>PostalOne!</i> when the Permit Type is Official Mail.
Non-Profit Authorization Number	Alphanumeric		Exists for mailer convenience. <i>PostalOne!</i> uses the Permit Number or if populated the Mail Owners Lcl Permit Ref Num / Int.I Bill Num to find the authorization number.
Title	Alphanumeric		Exists for mailer convenience.
Mailer ID of Mail Owner	Alphanumeric	Conditionally Required	Must be all numbers. A Mailer ID is always six numbers or nine numbers. May have leading zeroes if significant. Left-justify and do not add leading zeroes to a six digit Mailer ID to make nine digits. Postal Service assigned. See Full-service Data Distribution.
CRID of Mail Owner	Alphanumeric	Conditionally Required	Postal Service assigned. Use only numeric characters, left justify and do not add leading zeroes. See Full-service Data Distribution.
Mailer ID of Preparer	Alphanumeric	Conditionally Required	Must be all numbers. A Mailer ID is always six numbers or nine numbers. May have leading zeroes if significant. Left-justify and do not add leading zeroes to a six digit Mailer ID to make nine digits. Postal Service assigned. See Full-service Data Distribution.
CRID of Preparer	Alphanumeric	Conditionally Required	Postal Service assigned. Use only numeric characters, left justify and do not add leading zeroes. See Full-service Data Distribution.
User Option Field	Alphanumeric		
Payment Account Number	Alphanumeric	Conditionally Required	Do not zero pad. It is a mandatory field for Mail Anywhere
MPA Record Status	O,D,I,U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-8 Mailer Postage Account Record - MPA

5.6 Component Record (CPT)

Component Record (CPT)

Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
Component ID	Alphanumeric	Required	Must have a corresponding MCR record. <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Component Description	Alphanumeric		The CPT Component Description is an optional field (may be left blank or may have any description convenient to the mailer) and does not determine enclosure type or class.
Component – Weight	Numeric Decimal	Required	99v9999 pounds (decimal point implied)
Component - Weight: Source	A,P,C,L		Source of a piece
Component - Weight: Status	M,P,F,N		Optional. The IDEAlliance Mail.dat Specification shows this Required.
Component - Length	Numeric		Length of a copy 99v9999 (decimal point implied)
Component - Width	Numeric		Width of a copy 99v9999 (decimal point implied)
Component - Thickness	Numeric		Thickness of a copy 99v9999 (decimal point implied)
Component - Periodical Ad Percentage	Numeric Decimal		999v99. Must be greater than or equal zero and less than or equal 100.00. Required for Periodicals if the CPT Periodical Ad% Treatment is B or S. If Component – Periodical Ad Percentage is blank, Periodical Ad% Treatment must Blank, B or N. If Component – Periodical Ad Percentage is zero, Periodical Ad% Treatment must Blank, B, N or S. If Component – Periodical Ad Percentage is greater than zero, Periodical Ad% Treatment must be B, N or S. Component (CPT) Ad % Basis is only required when there are multiple components in the mail piece unit (MPU) with a Periodical Ad% Treatment value of S. See Section 6.1 for an explanation of how Ad % Basis is used to calculate Ad % for the publication when there are multiple components with Ad % Treatment = S.
Component - Periodical Ad Percentage: Status	N,P,F		Required for Periodicals if the CPT Periodical Ad% Treatment is B or S.
Component - Class	1,2,3,4,5,9	Required	Required, populate all three of Component – Processing Category and Component – Rate Type, and Component – Processing Category.
Component - Rate Type	R, N, S, C, B, , P, L, F, B, E, G, I, J, O, K, D, W, Y, H, M, Z, V	Required	Required, populate all three of Component – Processing Category and Component – Rate Type, and Component – Processing Category. For MPU Class 1 the Rate Type must be R, E, G, J, K, O, T, I, or V. For MPU Class 2 or 5, the Rate Type must be R, N, S, C, W, Y, H, Z, or M. For MPU Class 3, the Rate Type must be R, N, or M. For First-Class (CPT Class 1) enclosures in Periodicals or Bound Printed Matter (MPU Class 2, 4, or 5) the Rate Type must be R or Z. For Standard Mail (CPT Class 3) enclosures in Periodicals or Bound Printed Matter (MPU Class 2, 4, or 5) the Rate Type must be R, Z or M. For MPU Class 4 the Rate Type must be B, P, L, F, or D.
Component - Processing Category	LT, FL, CD, CM, NB, NP, MP, IR, PF, or NA	Required	Populate all three of Component – Processing Category and Component – Rate Type, and Component – Processing Category. Must match processing category in the MPU unless the component is an enclosure.
Mailer ID of Mail	Alphanumeric		Must be all numbers. A Mailer ID is always six numbers or nine

Component Record (CPT)			
Field	Acceptable Values	Required	Notes
Owner			numbers. May have leading zeroes if significant. Left-justify and do not add leading zeroes to a six digit Mailer ID to make nine digits. USPS Mailer ID. See Full-service Data Distribution.
CRID of Mail Owner	Alphanumeric		USPS CRID. Use only numeric characters, left justify and do not add leading zeroes. See Full-service Data Distribution.
Periodical Ad% Treatment	B,S,N		For Periodicals, CPT Periodical Ad Percentage greater than or equal zero and less than or equal 100.00 is required if this field is S. If Component – Periodical Ad Percentage is blank, Periodical Ad% Treatment must Blank, B or N. If Component – Periodical Ad Percentage is zero, Periodical Ad% Treatment must Blank, B, N or S. If Component – Periodical Ad Percentage is greater than zero, Periodical Ad% Treatment must be B, N or S. The Component file Ad % Basis value is required and must be greater than zero for each component with a Periodical Ad% Treatment value of S if there are multiple components with a Periodical Ad% Treatment value of S. See Section 6.1, Ad % Basis for an explanation of how Ad % Basis is used to calculate Ad % for the publication when there are multiple components with Ad % Treatment S.
Periodical Volume Number	Alphanumeric		If this field has a value, Periodical Issue Number is required or the job will be rejected.
Periodical Issue Number	Alphanumeric	Conditionally Required	Required if Volume Number is populated. The job will be rejected if Volume Number is filled, but Issue Number is empty.
Periodical Issue Date	Date		YYYYMMDD - Example: 20061225. See Issue Date Values below for suggested values. Only required for Periodicals.
Periodical Frequency	Numeric		<i>PostalOne!</i> uses the frequency on the publication record at the Post Office location. If Periodical Frequency is missing, the <i>PostalOne!</i> system treats the field as blank and continues processing. This Periodical Frequency is printed as the frequency per year on the Periodicals postage statement.
Equivalent User License Code	Alphanumeric		Use with Equivalent Mail.dat Job ID and Equivalent Component ID.** The Postal Service systems treat the Equivalent User License Code as case sensitive. Required for equivalents to cross Job IDs.
Equivalent Mail.dat Job ID	Alphanumeric		Use with Equivalent User License Code and Equivalent Component ID.** Required for equivalents to cross Job IDs.
Equivalent Component ID	Alphanumeric		Use with Equivalent User License Code and Equivalent Mail.dat Job ID.**
Equivalent Component Type	W,B,blank		For Periodicals only.
Ad % Basis	Numeric		9999v99 The Component file Ad % Basis value is required and must be greater than zero for each component with a Periodical Ad% Treatment value of S if there are multiple components with a Periodical Ad% Treatment value of S. See Section 6.1, Ad % Basis for an explanation of how Ad % Basis is used to calculate Ad % for the publication when there are multiple components with Ad % Treatment = S.
Component Title	Alphanumeric		Exists for mailer convenience.
Standard Parcel Type	M, F		

Component Record (CPT)			
Field	Acceptable Values	Required	Notes
User Option Field	Alphanumeric		The USPS will use the content in this field for display of marketing information by MyPost
CPT Record Status	O,D,I,U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-9 Component Record - CPT

5.6.1 Component Record - Issue Date Values

For the Issue Date field, use the date the publisher provides in the issue if it is a month, day and year format. In all cases, if there is a cover/issue date on a publication, use that date as the issue date.

If no date has been provided, use the table below. This is an optional method to standardize the usage of the issue date. The Pricing and Classification Service Center (PCSC) provided these suggested dates. Any method to standardize the issue date is acceptable if it meets the requirement that all postage statements for the same issue have the same issue date. Look up the frequency of the issue and then use the month, day and year provided. If two issues occur on the same date, use the Volume Number and Issue Number to differentiate the issues.

Frequency	Issue	Use Date
Quarterly (if not dated, or no month & year)	First Quarter	1/1/YYYY
	Second Quarter	4/1/YYYY
	Third Quarter	7/1/ YYYY
	Fourth Quarter	10/1/ YYYY
Seasonal (if not dated, or no month & year)	Spring	3/21/ YYYY
	Summer	6/21/ YYYY
	Fall	9/21/ YYYY
	Winter	12/21/ YYYY
Monthly (if not dated) or any other frequency using only a Month & Year as issue date	Month & Year	M/1/ YYYY
Semimonthly (if not dated)	First Issue of Month	M/1/YYYY
	Second Issue of Month	M/15/YYYY
Bimonthly (if not dated)	First Month of Issue	
	e.g. Jun-Jul 2006	6/1/2006
	Dec 05/Jan 06	12/1/2005
		etc.

Table 5-10 Suggested Issue Date Values by Frequency

Note: All Special/Extra issues or other frequencies should have an issue date.

5.6.2 Component Record – Addressed Supplement Scenarios

These scenarios require that

1. Each addressed supplement with a unique weight and/or advertising percentage must have its own Component and its own Mail Piece Unit.
2. The Mail Piece Unit – Class for the host publication and for the addressed supplement shall have values 2 or 5.
3. The Mail Piece Unit – Rate Type for the host publication and for the addressed supplement shall have values R, N, C, S, Y, or W.
4. The Component File Component – Class for the addressed supplement shall have values 2 or 5.

5. The Container Quantity (CQT) fields Copies and Pieces must be populated with the actual number of addressed supplements copies and pieces. (Note: These copies and pieces are used to calculate pound postage and bundle and container postage but copies are automatically set to zero to calculate piece postage. In pound postage these copies count for the weight but not for subscriber or nonsubscriber copies.)

6. The Package Quantity (PQT) fields Copies and Pieces must be populated with the actual number of addressed supplements copies and pieces.

Note: These copies and pieces are used to calculate pound postage and bundle and container postage but copies are automatically set to zero to calculate piece postage. In pound postage these copies count for the weight but not for subscriber or nonsubscriber copies.)

7. Both the host publication and the addressed supplement Component file Periodical Ad % Treatment must be S. However, the Ad % may be zero.

8. If the addressed supplement is claiming full-service and using the Intelligent Mail Range Record, the Intelligent Mail Range Class must be value 2.

9. If the addressed supplement is claiming full-service and using the Piece Detail Record, associate the Intelligent Mail Barcode to the appropriate Piece Detail Record and Container Quantity Record CQT Database ID for the Mail Piece Unit ID for the addressed supplement.

10. A host publication may have ride-alongs, repositionable notes, incidental and non-incidental enclosures. The following scenarios show the host publication without these options. For a normal supplement sent with the host publication the requirement is to associate both the supplement and the host publication components with the host publication mailpiece unit. (See the IDEAlliance Mail.dat Specification - Special Usage Scenario – Periodical With First Class or Standard Mail Enclosure – Table title: Treatment within the Component Record of various types of enclosures & attachments #3 Periodicals Supplement) However, for an addressed supplement we associate the addressed supplement to a mail piece unit and the host publication to a different mail piece unit. The simplest scenario for an addressed supplement is represented as follows.

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Host	CPT1	MPU1	R
Addressed Supplement	CPT2	MPU2	Z

Associate the Component ID of the addressed supplement and its repositionable notes, ride alongs, or nonincidental enclosures to the Mail Piece Unit ID of the addressed supplement in the MPU/C Relationship Record (MCR) file. (See scenarios 1-3 below). In Scenario 4, a Mail.dat file may have multiple editions of addressed supplements (various copy weights and advertising percentage) for a single host book. In Scenario 5, the same addressed supplement (same copy weight and advertising percentage) may be assigned to multiple MPU IDs for customer convenience. In Scenario 6, a Mail.dat job may have only addressed supplements without their host publication.

SCENARIO 1: Addressed Supplement with Repositionable Notes

This scenario illustrates a file submission describing a mailing with Addressed Supplement associated with an Incidental Enclosure of type Repositionable Note (Component Rate Type M).

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Host	CPT1	MPU1	R
Addressed Supplement	CPT2	MPU2	Z
Addressed Supplement			
Repositionable Note	CPT3	MPU2	M

Note:*Addressed Supplements can be associated with multiple Incidental Enclosures.

SCENARIO 2: Addressed Supplement with Ride-Alongs

This scenario illustrates a file submission describing a mailing with Addressed Supplement associated with an Incidental Enclosure of type Ride-Along (Component Rate Type H).

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Host	CPT1	MPU1	R
Addressed Supplement	CPT2	MPU2	Z
Ride Along	CPT3	MPU2	H

Note: *Addressed Supplements can be associated with multiple Incidental Enclosures.

SCENARIO 3: Addressed Supplement with Included Part or Host – Incidental Enclosure

This scenario illustrates a file submission describing a mailing with Addressed Supplement associated with an Incidental Enclosure of type Included Part of Addressed Supplement (Component Rate Type Z).

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Host	CPT1	MPU1	R
Addressed Supplement	CPT2	MPU2	Z
Incidental Enclosure	CPT3	MPU2	Z

Note: *Addressed Supplements can be associated with multiple Incidental Enclosures.

SCENARIO 4: Periodical Mailing with Multiple Addressed Supplements

This scenario illustrates a file submission describing a mailing with multiple Addressed Supplements.

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Host	CPT1	MPU1	R
Addressed Supplement	CPT2	MPU2	Z
Addressed Supplement	CPT3	MPU3	Z

SCENARIO 5: Addressed Supplement with various Mail Piece Unit Records

This scenario illustrates a file submission describing a mailing with Addressed Supplement where the associated component is assigned multiple Mail Piece Units.

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Addressed Supplement	CPT2	MPU1	Z
Addressed Supplement	CPT2	MPU2	Z

SCENARIO 6: Mail.dat containing only Addressed Supplement elements

This scenario illustrates a file submission describing a mailing with Addressed Supplement where the Mail.dat file contains only information related to the Addressed Supplements, and not their hosts.

Piece	Component ID	Mail Piece Unit ID	Component – Rate Type
Addressed Supplement	CPT1	MPU1	Z

5.6.3 Component Record – Classroom Publication Scenario

The CPT Rate Type and the MPU Rate type must always be C for the classroom publications. If the teacher edition includes a nonsubscriber copy of the student edition, then construct the data with one and only one component in the mail piece unit as follows.

Edition	CPT Component Weight	Notes
Student	0.0264 lb.	Subtract one nonsubscriber copy for each applicable copy of a teacher edition.
Teacher	0.0684 lb.	Include weight of one nonsubscriber copy (Teacher portion 0.0420 lb.) adjust advertising percentage to include the one nonsubscriber copy.

Table 5-11 Component Record – Classroom Publication Scenario

5.7 Component Characteristics Record (CCR)

Component Characteristics Record (CCR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
Component ID	Alphanumeric	Required	Must match Component ID of Component.
Characteristic Type	C,I,F	Required	C = Content, I = Incentive F = Fee
Characteristic	<p>For 14-1 following values are supported: Content: NF, DC, NP,RE, VV, PI Incentive: SS, MT, RR,VP, RE, SB, IV, ME, MI, PP, AD, CP Fee: OS, GS, PP,CB</p> <p>Note: VP = Coupon Promotion VV = Political Mail, PI = Election Mail for 14-1 only</p> <p>For 14-2 following values are supported: Content: NF, DC, NP,PM, EM, HM Incentive: SS, MT, RR,VV,VP, RE, PI, SB, IV, ME, MI, PP, AD, CP, CO Fee: OS, GS, PP,CB</p>	Required	Key field. Use as many records per component ID as required to describe the component content, incentive, and fee. Supported values are described below. Unsupported values are ignored.
CCR Record Status	O, D, I, U		Required
Closing Character	#	Required	Required. No characters are permitted after the closing character.

Table 5-12 Component Characteristics Record – CCR

Characteristic Type	Characteristic Description
Content	CT = Catalog
Content	NF = Contents NOT required to be mailed FCM
Content	DC = DVD/CD or other disk
Content	RT = Round Trip ONLY: One DVD/CD or other disk (can be LT or FL)
Content	NP = PACT act
Content	PM = Political Mail
Content	EM = Election Mail
Content	RE = Hazardous Material (For 14-1 only)
Content	HM = Hazardous Material
Content	VV = Political Mail (For 14-1 only)
Content	PI = Election Mail (For 14-1 only)
Incentive	MI = Mobile Interactive Technology
Incentive	ME = Emerging Mobile Technology
Incentive	RR = Reply Envelope or Reply Card
Incentive	SS = Seasonal Sale
Incentive	VV = Volume w/% off

Characteristic Type	Characteristic Description
Incentive	VP = Coupon Promotion (For 14-1 only)
Incentive	RE = Revenue
Incentive	PI = Piece Count
Incentive	SB = Small Bus w/% off
Incentive	AD = Advertising
Incentive	CO = Coupon Promotion
Incentive	CP = Color Ink
Fee	OS = Operational Surcharge
Fee	GS = Geographic Surcharge
Fee	PP = Picture Permit Indicia
Fee	CB = Certificate of Bulk Mailing

Table 5-13 Component Characteristics Record

5.8 Container Summary Record (CSM)

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
Segment ID	Alphanumeric	Required	Must match Seg ID of Segment.
Container Type	1,2,3,4,5,A, B,C,D,E,F,G,H,L,M, N,O,P,R,S,T,U,V,W, Z, AB	Required	This field impacts prices for Periodicals mailings. See the Container Type Values table
Container ID	Numeric	Required	If numeric only, fill left with zeroes. Must be unique within a Job ID. A Container ID may only exist in one Segment ID. A Container ID may only have one Container Type. Each container ID represents either a handling unit or a container. The <i>PostalOne!</i> system does not support updates of this field; only inserts of new records are supported for the key fields.
Display Container ID	Alphanumeric	Required	If numeric only, fill left with zeroes.
Container Grouping Description	Alphanumeric		Spaces allowed in original and update jobs.
Container Destination Zip	Alphanumeric	Required	5-digit or 3-digit destination of container. Same as destination 5-digit or 3-digit sack or tray label. These ZIP defaults are provided for use in the event that no pre-identified postal code is available.
Container Level	A,B,C,D,E,F,G,H,I,J, K,M,N,O,P,Q,R,S,T, U,V,W,X,Y,Z, AA,AB,AC,AD,AE, AF,AG,AH,AI,AJ,AK AL,AM,AN,AO,AP, AQ,AR,AS, AT	Required	This field impacts prices for Periodicals mailings. For more information, see the Container Level Values table. When Flat Tubes are used, Flat Tubes equal S = Sack for Periodical, Standard, and Bound Printed Matter.
Entry Point for Entry Discount - Postal Code	Alphanumeric	Required	The postal code (5-digit or 3-digit) of the facility where the specified container is planned to enter into the postal system.
Entry Point for Entry Discount - Facility Type	B,A,S,D,H,R,O, T,N,C,E,J,K,L, Q, W,Y	Required	This field impacts prices for Periodicals mailings. For more information, see the Entry Point for Entry Discount – Facility Type Values table. Used in validation with FAST

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			<p>appointment facility and Mail Direction Files for drop shipments.</p> <p>Class is Periodicals: B, A, S, D, R, O, T, N, C, E, J, K, L, Q, H or W</p> <p>All other classes: B, A, S, D, H, R, O, T, N, C, E, J, K, L, or Q</p> <p>The Entry Point for Entry Discount – Facility Type cannot be N for full-service or mixed-service jobs.</p> <p>The Entry Point for Entry Discount – Facility Type cannot be B, R, S or D for First-Class Mail jobs (.seg Class Defining Preparation field is 1)</p>
Entry Point - Actual / Delivery - Locale Key	Alphanumeric	Required	<p>Should be populated with the Locale key from the USPS Drop Shipment Product. The USPS DropShip Product is available at fast.usps.com: Business Customer Gateway</p> <p>The value should be preceded by the letters LOC for facility types O, K, L, J, C, Q, or E. Used to assign a Locale Key to a facility on the Postage Register. For periodical mailings this field is used as a postage statement generation variable.</p>
Entry Point – Actual / Delivery Postal Code	Alphanumeric	Required	ZIP+4 of building receiving the mail, DMU for DMU entered mail
Parent Container Reference ID	Numeric		A logical tray can be associated to either a physical or logical container. A physical tray or sack can be associated to either a physical or logical container. This field must match a Container ID in the CSM.
Truck or Dispatch Number	Alphanumeric		
Stop Designator	Alphanumeric		
Reservation Number	Alphanumeric		<p>When populated, should be in one of the following formats</p> <p>10-digit value with the format nnnnn + R + mmdd where n=numeric and mmdd=date of recurring appt</p> <p>5 digit value with the format nnnnn + R</p> <p>9 digit numeric value between 100000000 and 999999999</p>
Actual Container Ship Date	Date		YYYYMMDD - Example: 20140127.
Actual Container Ship Time	Time		HH:MM – Example: 18:12. If an Actual Container Ship Time is provided, the Actual Container Ship Date is required.
Scheduled Pick Up Date	Date		YYYYMMDD - Example: 20140127.
Scheduled Pick Up Time	Time		HH:MM
Scheduled In-Home Date	Date		YYYYMMDD
Additional In-Home Range	Numeric		
Scheduled Induction Date	Date		YYYYMMDD - Example: 20140127. Required for full and mixed service ready to pay containers and transportation updates when the .csm USPS Pick Up field is populated with N.

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			Date must be within 30 days into the past or present of the Postage Statement Mailing Date for a Full-Service or Mixed Service Mailing.
Scheduled Induction Time	Time		HH:MM – Example: 13:30. Required for full and mixed service ready to pay containers and transportation updates when the .csm USPS Pick Up field is populated with N. If a Scheduled Induction Time is provided, the Scheduled Induction Date is required.
Actual Induction Date	Date		YYYYMMDD – Example 20140127. FAST closeout date. For mailer tracking only.
Actual Induction Time	Time		HH:MM – Example: 13:30. FAST Closeout time. For mailer tracking only.
Postage Statement Mailing Date	Date	Required	<p>. YYYYMMDD – Example: 20140127. Cannot be all zeroes. Used to determine price/postage prices applicable – finalization date. Postage Statement Mailing Date may be backdated to the price change before last or one year in the past (whichever is most recent). The Postage Statement Mailing date cannot be populated with a date that is more than 120 days in the future.</p> <p>The system will not require the CSM Postage container Mailing Date if the CSM Container Status is Original. There is no need for Postage container Mailing Date because there is no postage container created for this case.</p> <p>The system will not require the CSM Postage container Mailing Date if the CSM Container Status is Preliminary. When no CSM Postage container Mailing Date is provided, the system will use the current system date for the mailing date on the estimated postage containers.</p> <p>Mail.dat files may be used to enter or update postage statements with mailing dates before or after the Jan 2014 price change but dates must be all before or all after the price change. For files submitted before the price change date with a mailing date after the price change date, the postage statements will be converted to the new rates upon finalization.</p>
Postage Statement Mailing Time	Time		HH:MM – Example: 19:00. Used to determine price/postage prices applicable – finalization time.
Number of Copies	Numeric	Required	Total copies on the container represented by this record.
Number of Pieces	Numeric	Required	Total number of pieces on container represented by this record.
Total Weight (product only)	Numeric	Required	<p>99999999v9999 pounds, (decimal point implied), cannot be zero.</p> <p>For all classes of mail, omit the validation for the CSM container weight of the children containers to add up to the CSM weight of the parent container.</p>
User Container ID	Alphanumeric		If numeric only, fill left with zeroes. <i>PostalOne!</i> will fail the file if this field is filled for sibling containers.
Container Status	R,C,X,P,T,O,D, blank		See the Rules for Sending Container Status Updates and the table Allowable CSM Container Status Values.
Included in Other Documentation	Blank, O, L,I		Links to the associated OCI file. Must be blank for all pallet-level containers and mail that is not copalletized. Completed with O for trays and virtual sacks at origin when

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			sent for copalletization. Completed with L for trays and virtual sacks at copalletization to link back to the origin location.
Machinable Preparation Indicator	Y,N,U,A	Required	This field indicates machinability based rates and/or surcharges as applicable to respective container and need for Machinable or Manual on respective container label.
Tray Preparation Type	P, L, S, N	Required	<p>The Tray Preparation Type supports the DMM Exception to Bundle Preparation - Full Single-Sort-Level Trays as follows.</p> <p>For Letters:</p> <p>It has a CPT Component - Processing Category of LT (Letter) and</p> <p>It is in a container with a CSM Tray Preparation Type of L (Loose) or S (Separator) or N (Not Applicable) AND</p> <p>It is in a container with CSM Container Type of O, T, or E (1 foot tray, 2 foot tray, or EMM tray) and</p> <p>The CQT Rate Category for every letter piece in the bundle must be one of the following: O, A, B, E, H, L, L1, or L2.</p> <p>For Flats:</p> <p>a. It has a CPT Component - Processing Category of FL (Flat) and</p> <p>It is in a container with a CSM Tray Preparation Type of L (Loose) or S (Separator) or N (Not Applicable) and</p> <p>It is in a container with CSM Container Type of F (flat tub).</p> <p>The CQT Rate Category for every flat piece in the bundle must be one of the following: O, A, B, E, H, L, L3, or L4.</p>
Trans-Ship Bill of Lading Number	Alphanumeric		
Sibling Container Indicator	Y, blank		<p>A sibling container may not fill in many fields in the CSM because this container inherits those values from its sibling. The following required fields are populated in the CSM file when the Sibling Container field in the CSM is set to Y:</p> <ul style="list-style-type: none"> - Job ID - Segment ID - Container ID - Sibling Container Indicator - Sibling Container Reference ID - Container Type - CSM Record Status <p>The following optional fields are validated if populated in the CSM file when the Sibling Container field in the CSM is set to Y:</p> <ul style="list-style-type: none"> Label: IM Container or IM Tray Barcode Label: 10 Character Container Barcode Label: Destination Line 1 Label: Destination Line 2 Label: Content Line 1 Label: Content Line 2 Label: Entry (Origin) point Line Label: User Information Line 1 Label: User Information Line 2

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			Label: Container Label CIN Code Label: Container Label Type Unique Container ID If other fields are populated for a sibling Container ID, the Mail.dat file is rejected.
Sibling Container Reference ID	Numeric		If the Sibling Container Indicator is Y, this field is required and must match a Container ID in the CSM file.
Postage Grouping ID	Alphanumeric		
Container Gross Weight – Source	A,E		Even when set to E, the <i>PostalOne!</i> system always processes container gross weight as actual.
Container Height – Source	A,E		
EMD - 8125 ASN Barcode	Alphanumeric		
Transportation Carrier ID	Numeric		USPS CRID identifying the transporter of mail. (The Mail.dat specification says alphanumeric.)
FAST Content ID	Alphanumeric		USPS FAST CONTENT ID. This identifies the contents (one or more IMcbs) going to an entry point.
FAST Scheduler ID	Numeric		USPS CRID identifying the scheduler of FAST appointments.
USPS Pick Up	Y,N,blank		Used for DMU-Verified, USPS-Transported mail. This field is required when mailing has full-service mailpieces. Required for Full-Service mailings when the Container Status is R or T and the container is not a sibling container.
CSA Separation ID	Numeric		Separation number as defined in the USPS Guide to Customer/Supplier Agreements
CSA Trip ID	Alphanumeric		Used for DMU-Verified, USPS-Transported mail. Provide the appropriate Postal Service assigned numeric CSA Trip ID from the CSA. Do not provide additional information such as the ship date in the CSA Trip ID field. Leading zeroes are accepted.
Scheduled Ship Date	Date		YYYYMMDD. Example: 20140127. Required for DMU-Verified, USPS-Transported mail. Date must be within 30 days into the past or present of the Postage Statement Mailing Date for a Full-Service or Mixed Service Mailing.
Schedule Ship Time	Time		HH:MM. Example: 19:00. Required for DMU-Verified, USPS-Transported mail.
DMM Section Defining Container Preparation	Alphanumeric		Allows up to 12 characters. Minimum is 3 characters.
Label: IM Container or IM Tray Barcode	Alphanumeric		See USPS Specification 24 characters for trays or sacks. For pallets, use 21 characters; populate the leftmost 21 characters. For full-service option IM Container or IM Tray Barcode must be unique for 45 days after the Postage Statement Mailing Date in the CSM. If not, then an error is reported in the Detail Error Verification Reports. For sacks or trays containing full-service mailpieces, there is a

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			threshold of 1% for duplicate barcodes compared to the total trays or sacks in the job.
Label: Destination Line 1	Alphanumeric		Left Justify
Label: Destination Line 2	Alphanumeric		Spaces allowed in original and update jobs. Right Justify
Label: Contents - Line 1	Alphanumeric		Left Justify
Label: Contents - Line 2	Alphanumeric		Right Justify
Label: Entry (Origin) Point Line	Alphanumeric		
Label: User Information Line 1	Alphanumeric		
Label: User Information Line 2	Alphanumeric		
Label: Container Label CIN Code	Alphanumeric		
User Option Field	Alphanumeric		
eInduction Indicator	Alphanumeric		Y= Yes, Blank = No
CSA Agreement ID	Alphanumeric	Required	Required for full or mixed service First-Class Mail jobs (.seg Class Defining Preparation field is 1) when the .csm Container Level field is AK, AL, AM, AN, AO, AP or AQ
Presort Labeling List Effective Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) For containers created with a CSA, use CSA effective date. Fill with 00010101 if date is not applicable.
Last Used Labeling List Effective Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) For containers created with a CSA, use CSA effective date. Fill with 00010101 if date is not applicable. For the initial presort, this will have the same value as Presort Labeling List Effective Date field.
Presort City-State Publication Date	Numeric	Required	YYYYMMDD (cannot be all zeroes). Use 01 for day if only Year and Month provided. Fill with 00010101 if date is not applicable.
Last Used City-State Publication Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) Use 01 for day if only Year and Month provided. Fill with 00010101 if date is not applicable. For the initial presort, this will have the same value as Presort City-State publication Date.
Presort Zone Chart Matrix Publication Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) Fill with 00010101 if date is not applicable.
Last Used Zone Chart Matrix Publication Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) Fill with 00010101 if date is not applicable. For the initial presort, this will have the same value as Presort Zone Chart Matrix Publication Date.
Last Used Mail Direction Publication Date	Numeric	Required	YYYYMMDD (cannot be all zeroes) Fill with 00010101 if date is not applicable.
Supplemental Physical Container ID	Numeric		Container ID of the Physical Parent Container in which this physical tray or sibling tray resides, if such relationship exists. The Sibling Container Reference ID must be

Container Summary Record (CSM)			
Field	Acceptable Values	Required	Notes
			populated when populating the Supplemental Physical Container ID. This is an optional field and can be used to associate either a physical or a sibling handling unit to the actual container that it is on but only under specific circumstances: When the container it is on is a sibling to either a logical or physical master container. When the container that it is on is a physical container that has at least one sibling (as in an overflow scenario).
Accept Misshipped	Alphanumeric		Y= Yes, Blank = No
eInduction Misshipped Container Payer CRID	Alphanumeric		To provide CRID for an entity linked to a misshipped container for invoicing.
CSM Record Status	O,I,D,U	Required	If inserting or updating a container that is not a sibling container then the Container Quantity (CQT) and Package Quantity Record (PQT) are required. In the case of full-service, if sending the Container Summary Record (CSM), the PDR (Piece Detail Record) is also required.
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-14 Container Summary Record - CSM

5.8.1 Container Summary Record - Container Type Values

For Outside-County Periodicals mailings, Container Type Mail.dat values (CSM) values map to the following chargeable container types.

Mail.dat Value	Container Type
1 = #1 Sack	Sack
2 = #2 Sack	Sack
3 = #3 Sack	Sack
4 = 01 V Sack	Sack
5 = 03 V Sack	Sack
A = Hamper, Large Plastic	Pallet
B = Bedload	Not mapped for Periodicals
C = Collapsible Wire Container	Pallet
D = Eastern Region Mail Container w/ Web Door	Pallet
E = EMM Tray	Tray
F = Flat Tub	Tray
G = General Purpose Mail Container with Gate	Pallet
H = Hamper, Large Canvas	Pallet
L = Logical Tray	Not mapped for Periodicals
M = Logical Pallet (MLOCR)	Pallet
O = 1 Tray	Tray
P = Pallet	Pallet
R = Wire Container Rigid	Pallet
S = Sack	Sack
T = 2 Tray	Tray
U = Unit Load Device	Not mapped for Periodicals
V – Sack (Virtual)	Used in some cases to place bundles on pallets.

Mail.dat Value	Container Type
W = Walled Unit	Not mapped for Periodicals
Z = User Pallet	Pallet
AB = Air Box	Pallet

Table 5-15 Container Type Values

5.8.2 Container Summary Record - Container Level Values

For Outside-County Periodicals Container Level (CSM) values map to the following chargeable container levels.

Mail.dat Value	Container Level Price
A = CR-Direct	5-Digit
B = Mixed CR in 5 Digit	5-Digit
C = Mixed CR in 3 Digit	SCF/3-Digit
D = CR – 5 D Scheme	5-Digit
E = FSS Sort Plan	FSS Scheme
F = FSS Facility	FSS Facility
G = 5 Digit (Auto/Presort)	5-Digit
H = 5 Digit (Merged)	5-Digit
I = 5 Digit (Presort only)	5-Digit
J = 5 Digit (Barcode only)	5-Digit
K = Metro Scheme	SCF/3-Digit
L = Mixed RDC	Not mapped for Periodicals
M = 5D Scheme (Presort)	5-Digit
N = 5D Scheme (Auto, Presort)	5-Digit
P = 5D Scheme (Barcode)	5-Digit
Q = 5D Scheme (Merged)	5-Digit
R = 3 Digit (Auto, Presort)	SCF/3-Digit
S = 3 Digit (Barcode)	SCF/3-Digit
T = 3 Digit (Presort)	SCF/3-Digit
U = 3 Digit (CR, Auto, Presort)	SCF/3-Digit
V = 3 Digit Scheme	SCF/3-Digit
W = Unique 3 Digit	SCF/3-Digit
X = SCF	SCF/3-Digit
Y = Protected SCF	SCF/3-Digit
Z = ADC	ADC/AADC
AA = AADC	ADC/AADC
AB = Mixed ADC	Mixed ADC/AADC
AC = Mixed AADC	Mixed ADC/AADC
AD = ASF	Mixed ADC/AADC
AE = NDC	Mixed ADC/AADC
AF = Protected NDC	Mixed ADC/AADC
AG = Mixed NDC	Mixed ADC/AADC
AH = Origin Mixed ADC	Mixed ADC/AADC
AI = Protected ADC	ADC/AADC
AJ = Single Piece Container	Mixed ADC/AADC

Table 5-16 Container Level Values

5.8.3 Container Summary Record - Entry Point for Entry Discount

Detail Error Verification Reports reflect instances in which FAST appointments are not associated for drop ship mailings (drop ship is identified by Entry Point for Entry Discount Facility Type in the CSM = B DNDC, R ADC, S DSCF, or D DDU). SASP will associate FAST appointment IDs to physical containers/handling units by matching to one of the following: 1)

Reservation Number provided in the CSM or 2) IMcb provided in the CSM to the IMcb in the 99M records from FAST to retrieve an Appointment ID.

Detail Error Verification Reports reflect instances in which FAST appointments are not associated for DMU verified / mailer transported origin entry mail with a CSA (DMU verified / mailer transported with a CSA is identified by Entry Point for Entry Discount Facility Type in the CSM = O Origin, inclusion of a CSA ID in the SEG, and USPS Pick Up Indicator = N in the CSM). SASP will associate FAST appointment IDs to physical containers/handling units by matching to one of the following: 1) Reservation Number provided in the CSM or 2) IMcb provided in the CSM to the IMcb in the 99M records from FAST to retrieve an Appointment ID.

Entry Point for Entry Discount Facility Type must be set to S or R when the associated CSM Container Level is set to E or F for Periodicals.

For Outside-County Periodicals mailings, Entry Point for Entry Discount – Facility Type (CSM) values map to the following chargeable Container Entry values.

Mail.dat Value	Container Entry
A = ASF	Destination NDC
B = DNDC	Destination NDC
D = DDU	DDU
S = DSCF	Destination SCF
H = Tran Hub	Destination SCF
R = ADC	Destination ADC
O = Origin	Origin Post Office/DMU
T = Orig (T-Hub Sq)	Origin Post Office/DMU
N = Not-determined	Origin Post Office/DMU
C = Origin SCF	Origin SCF
E = Origin DDU	Origin Post Office/DMU
J = Origin ADC	Origin ADC
K = Origin NDC	Origin NDC
L = Origin ASF	Origin NDC
Q = Origin AMF	Origin NDC
Y = Origin FSS	DFSS
Z = DPC (Destination Processing Center)	Not mapped for Periodicals
W = DFSS	DFSS

Table 5-17 Entry Point for Entry Discount - Facility Type Values

5.9 Original Container Identification Record (OCI)

This record type is used for copalletization.

Original Container Identification Record (OCI)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	If numeric only, fill left with zeroes. No special characters allowed.
Container ID	Alphanumeric	Required	Must match a container ID in the CSM.
Original Job ID	Alphanumeric	Required	Must match a previously submitted Job ID.
Original User License Code	Alphanumeric	Required	Must match the User License Code for the Original Job ID.
Original Segment ID	Alphanumeric	Required	Must match a Segment ID for the Original Job ID.
Original Container ID	Numeric	Required	Must match a Container ID for the Original Job ID.
Original Display Container ID	Alphanumeric		Must match the Display Container ID for the Original Job ID and Container ID

Original Container Identification Record (OCI)			
Field	Acceptable Values	Required	Notes
Original Label: IM Container or IM Tray Barcode	Alphanumeric		Must match the Label: IM Container or IM Tray Barcode for the Original Job ID and Container ID
Original Mail.XML Customer Group ID	Alphanumeric		Not used by <i>PostalOne!</i>
Original Mail.XML Mailing Group ID	Alphanumeric		Not used by <i>PostalOne!</i>
Original Mail.XML Container ID	Numeric		Not used by <i>PostalOne!</i>
OCI Record Status	O,D,I,U		
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character

Table 5-18 Original Container Identification Record – OCI

5.10 Container Quantity Record (CQT)

Container Quantity Record (CQT)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
CQT Database ID	Numeric	Required	If numeric only, fill left with zeroes.
Container ID	Numeric	Required	Must match Container ID in CSM.
3 Digit / 5 Digit Container Division	Alphanumeric	Required	3 or 5 digit representing a portion or all of the pieces within the container. The 3 or 5 digit represents those pieces within the container to a single 3 or 5 digit. Data used on the qualification report.
Mail Piece Unit ID	Alphanumeric	Required	Must match MPU ID in MPU.
Zone	S, D, L, N, V, W 1, 2, 3, 4, 5, 6, 7, 8, 9,	Required	If Periodicals: Not County/In County is I, D or N. If Periodicals: Not County/In County is N, D, S, V,W 1, 2, 3, 4, 5, 6, 7, 8, or 9. If Bound Printed Matter, 1, 3, 4, 5, 6, 7, 8, 9, S, D and N. If First-Class Mail, Standard Mail, Media Mail or Library Mail, N. If Parcel Post: 1, 3, 4, 5, 6, 7, 8, L, and N. If Priority Mail: 9
Destination Entry	B,S,D,N,A,O,P	Required	Used to calculate postage. Barcode Discount will be disregarded for DDU Entry, since there are no corresponding USPS rates for DDU entry with barcode discount.
Rate Category	See list by class and processing category where indicated. CQT records representing full-service mailpieces must	Required	Used to calculate postage. First-Class Mail: E, H, L1, L2, L3, L4, L5, N, S, G, K. Media and Library Mail: S, N, G Bound Printed Matter: S, N, D, FS, FC Standard Mail Customized MarketMail (CMM) processing category CM: N Standard Mail Letters: A, B, A1, B1, D,

Table 5-23 First-Class Mail – Rate Category and Corresponding Price Level

For Parcel Select, the CQT Rate Category is mapped to the piece postage lines in the Periodicals postage statement. The following table for Parcel Select – Rate Category and Corresponding Price Level shows the correspondence to the displayed Price Level in the Qualification Report for Processing Categories MP = Machinable Parcel, IR = Irregular Parcel, OS = Outside Parcel, and NP = Non machinable Parcel.

Reply Rides Free pieces (CPT Postal Price Incentive Type of A = Reply Rides Free) will be identified in Part A Automation Prices of the First-Class Postage Statement. All Reply Rides Free pieces are processed at the 2oz rate. If not all conditions for Reply Rides Free are met, the pieces will appear on the existing First-Class Part A lines.

Rate Category	Rate Category Description	Price Level	Price Level Description
Z1	Par Post (NDC Sort)	NDC	NDC Presort
Z2	Par Post (ONDC Sort)	ONDC	ONDC Presort

Table 5-24 Parcel Post – Rate Category and Corresponding Price Level

5.11 Package Quantity Record (PQT)

Package Quantity Record (PQT)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
CQT Database ID	Numeric	Required	Must match CQT Database ID in CQT.
Package ID	Alphanumeric	Required	The package ID must be unique within a container. For Periodicals bundle charges, validation creates a bundle for each unique combination of Container ID and Package ID. If numeric only, fill left with zeroes.
Package Zip Code	Alphanumeric	Required	The package ID must be unique within a container. For Periodicals bundle charges, validation creates a bundle for each unique combination of Container ID and Package ID.
Package Carrier Route	Alphanumeric		The package ID must be unique within a container. For Periodicals bundle charges, validation creates a bundle for each unique combination of Container ID and Package ID. Package Carrier Route must be four characters long having one of the following values as the first character: C = Carrier Route, R = Rural Route, H = Contract Route, B = PO Box, G = General Delivery (where the last 3 characters must be a numeric type).
Package Level	A,B,C,D,F,H,I,K,L,M, R,S,T,U,V,X,	Required	This field impacts bundle prices for Periodicals. For more information, see the Package Level Values table. Must contain only the characters A, B, C, D, F, H, I, K, L, M, T, U, or V for Periodicals and A, B, C, D, F, H, I, K, L, M, R, S, T, U, V, X for all other mail types.
Number of Copies	Numeric	Required	Number of copies must equal number of pieces except for Periodicals firm bundles.
Number of Pieces	Numeric	Required	Number of pieces within this specific package.
Bundle Charge Allocation	Numeric		9v999999. Used For Periodicals bundle charges when SEG Less Than a Presort Segment Presentation is Y = Yes.
PQT Record Status	O, D, I, U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-25 Package Quantity Record - PQT

5.11.1 Package Quantity Record - Package Level Values

For Outside-County Periodicals mailings, Package Level (PQT) maps to the following chargeable bundle levels:

Mail.dat Value	Periodicals Bundle Level	Mail Class
A = Firm	Firm at Container Level	Periodicals only
B = Carrier Route	Carrier Route	All mail classes
C = 5 Digit	5-Digit	All mail classes
D = Unique 3-Digit	3-Digit/SCF	All mail classes

Mail.dat Value	Periodicals Bundle Level	Mail Class
F = 3 Digit	3-Digit/SCF	All mail classes
H = ADC	ADC/AADC	Periodicals only
I = AADC	ADC/AADC	Periodicals only
K = Origin MxADC	Mixed ADC/AADC	Periodicals only
L = MxADC	Mixed ADC/AADC	Periodicals only
M = MxAADC	Mixed ADC/AADC	Periodicals only
R = Parcel	Not mapped for Periodicals	First-Class, Standard, Package Services
S = Multi-pc Parcel	Not mapped for Periodicals	First-Class, Standard, Package Services
T = 3-D Scheme	3-Digit/SCF	All mail classes
U = 5-D Scheme + L007	5-Digit	All mail classes
V = NDC	Mixed ADC/AADC	All mail classes
X = FSS Sort Plan	FSS	Periodicals only

Table 5-26 Package Level Values

5.12 Walk Sequence Record (WSR)

Walk Sequence Record (WSR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
Segment ID	Alphanumeric	Required	Must match Seg ID of Segment.
Package Zip Code	Alphanumeric	Required	<i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Package CR Number	Alphanumeric	Required	<i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Co-Palletization Code	Alphanumeric	Required	Populate with 01 if not needed. <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Walk Sequence Type	T,R	Required	
Walk Sequence Stops	Numeric	Required	
Walk Sequence Denominator	Numeric	Required	
Walk Sequence Database Date	Date	Required	YYYYMMDD Example: 20061225
WSR Record Status	O,D,I,U	Required	Acceptable values dependent on file type.
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-27 Walk Sequence Record – WSR

5.13 Piece Barcode Record (PBC)

Piece Barcode Record (PBC)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
PBC Unique ID	Numeric	Required	Uniquely identifies each PBC record
CQT Database ID	Numeric	Required	Must match CQT Database ID of CQT.

Piece Barcode Record (PBC)			
Field	Acceptable Values	Required	Notes
Package ID	Alphanumeric	Required	The package ID must be unique within a container. For Periodicals bundle charges, validation creates a bundle for each unique combination of Container ID, Package ID, Package ZIP Code and Package Carrier Route. If numeric only, fill left with zeroes.
Barcode	Alphanumeric	Required	IMbs allowed only Imps may only be submitted via a .pdr file using the .pdr IM Barcode field.
Wasted or Shortage Piece Indicator	W, S, X, T, blank		The Wasted or Shortage Piece Indicator values W or S deduct the postage for the piece from the postage statement. The Wasted or Shortage Piece Indicator values X or T or DO NOT deduct the postage for the piece from the postage statement. For further information on this field, see the Relationship Constraints Description for the PBC file
IMpb Barcode Construct Code	A, B, C, D, E, F, G, H, I, J, blank		Populate when IMpb is used. This three digit alphanumeric code identifies which combination of ZIP, MID, and serial number is used in the IMpb. This code will assist with the process when the barcode constituents need to be separated for further processing, such as identification of ZIP + 4 The only valid values for PostalOne! edoc submissions are A = C01, B = C02, C = C03, D = C04, E = C05, F = C06, G = C07, H = C08, I = C09, J = C10
PBC Record Status	O, D, I, U	Required	
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-28 Piece Barcode Record

5.14 Piece Detail Record (PDR)

The full-service option (SEG record type Full-service Participation Indicator is M or F) requires the PDR record type to send data for a Mail.dat job. If there are no full-service mailpieces in the Mail.dat file, the SEG Full-Service Participation Indicator value is blank and a PDR or PBC file may be submitted but is not processed for full-service.

Piece Detail Record (PDR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of Header.
CQT Database ID	Numeric	Required	Must match CQT Database ID of CQT.
Package ID	Alphanumeric	Required	Must match Package ID of PQT.
Piece ID	Alphanumeric	Required	If numeric only, fill left with zeroes. Each mailpiece has its own unique Piece ID in the Job ID. For all classes of mail, the <i>PostalOne!</i> system Mail.dat validation will allow the number of piece records in the PDR file for a Container ID to be within the range of copy count to piece count inclusive for the CSM data for that container ID. <i>PostalOne!</i> does not support updates of this field, only inserts of new records are supported for the key fields.
Piece Barcode	Numeric	Required	Must be left justified. 5, 9 or 11 digits are accepted (right fill with blanks if the delivery point provided by NCOA

Piece Detail Record (PDR)			
Field	Acceptable Values	Required	Notes
			has only 5-digits or 9 digits). For IMpb Non-Compliance processing of the ZIP+4 verification requires the 9 digit ZIP+4 is provided in the .pdr Piece Barcode filed.
Line-Of-Travel Sequence Number	Numeric		The customer will need to either populate the PDR LOT Sequence Number field where the pdr LOT Direction Code field is populated or unpopulated the LOT Direction Code field where the PDR LOT Sequence Number is blank.
Line-Of-Travel Seq. Direction Code	Alphanumeric		The customer will need to either populate the PDR LOT Sequence Number field where the pdr LOT Direction Code field is populated or unpopulated the LOT Direction Code field where the PDR LOT Sequence Number is blank.
Walk Sequence Number	Numeric		
Wasted or Shortage Piece Indicator	S,W,X,T,blank		The Wasted or Shortage Piece Indicator values W or S deduct the postage for the piece from the postage statement. The Wasted or Shortage Piece Indicator values X or T or DO NOT deduct the postage for the piece from the postage statement. For further information on this field, see the Relationship Constraints Description for the PDR file.
IM Barcode	Alphanumeric		May be 34 numeric characters for packages, but cannot be more than 31 numeric characters for letters, card and flats. Required 31 numeric characters for full-service mailpieces (right fill with zeroes if the delivery point provided by NCOA has only 5-digits or 9-digits). Must be left justified. If not full-service option use only the Piece Barcode. If the piece has value F in the Service Level Indicator in the CQT DB ID, the Service Type Code must be valid for the full-service option. IM Barcode must be unique for 45 days after the Postage Statement Mailing Date in the CSM. If not, then an error is reported in the Detail Error Verification Reports. If not Full-Service, leave IM Barcode blank if other than the IMb and fill in the delivery point in the required Piece Barcode. May be populated for basic service mailpieces but it is not required nor processed for basic-service.
Machine ID	Alphanumeric		
Mailer ID of Barcode Applicator	Alphanumeric		Must be all numbers. A Mailer ID is always six numbers or nine numbers. May have leading zeroes if significant. Left-justify and do not add leading zeroes to a six digit Mailer ID to make nine digits.
Move Update Method	0,1,2,4,5,6,7, 8		
ACS Key Line Data	Alphanumeric		Do not include pound signs (#), dashes (-), or spaces within the data. Left justify and include trailing spaces for data less than the length of the field.
Carrier Route	Alphanumeric		
IMpb Barcode	A,B,C,D,E,F,G, H,I,J,		Populate when IMpb is used. This three digit

Piece Detail Record (PDR)			
Field	Acceptable Values	Required	Notes
Construct Code	blank		alphanumeric code identifies which combination of ZIP, MID, and serial number is used in the IMpb. This code will assist with the process when the barcode constituents need to be separated for further processing, such as identification of ZIP + 4 The only valid values for PostalOne! edoc submissions are A = C01, B = C02, C = C03, D = C04, E = C05, F = C06, G = C07, H = C08, I = C09, J = C10
PDR Record Status	O,D,I,U	Required	
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-29 Piece Detail Record - PDR

5.15 Postage Adjustment Record (PAR)

PAR files are not allowed for Periodicals mailing class or MLOCR presentation category mailings. For PAR files where the Mail.dat MPA file contains multiple permit holders (payers) the system deducts the adjustment amount from the first postage statement found for that same permit holder that can accommodate the adjustment. . See additional details describing the use of the PAR file above in Relationship Constraints Description for the PAR file.

Postage Adjustment Record (PAR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of MCR.
Segment ID	Alphanumeric	Required	Must match Seg ID of MCR.
Mail Piece Unit ID	Alphanumeric	Required	Must match MPU ID of MCR. There may be one or more adjustments for each Mail Piece Unit ID.
Component ID	Alphanumeric	Required	Must match CPT ID of MCR. There may be only one adjustment for each Component ID.
Sequence Number	Numeric	Required	Must make this record unique in the PAR. The postage statement for the PAR record must be generated in the same Job ID as the PAR record. Only one adjustment is allowed per postage statement. Multiple adjustments are allowed per Job ID
Date	Date	Required	Adjustment Date
Adjustment Type	3,4	Required	Only spoilage or shortage accepted. This differs from the Mail.dat specification.
Adjustment Amount	Numeric	Required	999999v111. Cannot be zero. The system deducts the adjustment amount from the first postage statement found for that same permit holder that can accommodate the adjustment. When an incentive is claimed, the incentive amount on the spoiled pieces should be deducted from the Adjustment Amount.
Credit/Debit Indicator	D,C	Required	
Total Pieces Affected	Numeric		
User Comments	Alphanumeric		
Adjustment Status	R		Only ready to pay is supported. This differs from the Mail.dat specification.

Postage Adjustment Record (PAR)			
Field	Acceptable Values	Required	Notes
MPA - Unique Sequence/Grouping ID	Alphanumeric	Required	Must match an existing MPA ID of MCR. The Postage Payment Option for this MPA ID must be set to D = Debit, T = CAPS, or O = Other. The Postage Payment Method for this MPA ID must be P = Permit Imprint or G = OMAS Imprint. The same rules apply for the MPA ID representing the permit holder on the postage statement randomly chosen for adjustment in a Mail.dat job that has multiple permit holders.
User Option Field	Alphanumeric		
PAR Record Status	O,D,I,U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-30 Postage Adjustment Record - PAR

5.16 Special Fees/Charges Record (SFR)

Special Fees/Charges Record (SFR)			
Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of header
CQT Database ID	Numeric	Required	Must match CQT Database ID of CQT.
Piece ID	Alphanumeric	Required	Unique ID of individual piece within a mailing . If connected to PBC, for PBC unique ID, right-justify in the Piece ID field and zero fill.
Service Type	Alphanumeric	Required	If, applicable; Left Justify; Space Added Only one weight-variable fee/charge may be recorded on a single PDR record. Multiple flat fee per piece fees/charges may be recorded on one PDR record through the use of Combination Codes. For applicable values by mail class see table 5-32 below.
Service Stated Value	Numeric		99999999v99; dollars/cents, rounded (decimal implied) The value of the single piece noted when applying for the Special Service
Service Fee	Numeric	Required	99999v99; dollars/cents, rounded (decimal implied) Actual Postal dollars & cents incurred in costs for the specific piece for the one or more fees or charges noted above.
Special Fees/Charges Services ID	Alphanumeric	Required	Long Number unique for this set of services within the Job and Segment. Cannot mix services of two different IDs within the same record. (zero fill prior to numeric, if numeric only)
Amount Due	Numeric		99999v99; dollars/cents, rounded (decimal implied) Actual Postal dollars & cents to be collected for the specific piece upon delivery
SFR Record Status	O, D, I, U	Required	
Reserve	Alphanumeric		
Closing Character	#	Required	No characters are permitted after the closing character.

Table 5-31 Special Fees/Charges Record – SFR

5.16.1 Special Fees/Charges Record – Service Type Accepted Values

The *PostalOne!* System supports the following .sfr Service Types for each Mail Class.

Mail Class	Service Type	Postage Statement Extra Service Line
BPM, PM	K = Certificate of Mailing	S1
PM	D = Certified Mail	S2
BPM, PM	J = COD	S3
BPM, PM	B = USPS Tracking	S4
BPM, PM	E = Insured	S5
PM	F = Registered	S6
BPM, PM	I = Restricted Delivery	S7
BPM, PM	H = Return Receipt (Electronic)	S8
PM, BPM	HM = Return Receipt (Form 3811)	S9
BPM, PM	G = Return/Receipt/Merchandise	S10
BPM, PM	C = Signature Confirmation	S11
FC, BPM, PM	M = Special Handling	S13
BPM, PM	Z1 = Adult Signature Required	S15
BPM, PM	Z2 = Adult Signature Restricted	S16
PM	Y = Day Certain Delivery	S18
FC, BPM, PM	NP = Nonbarcoded Parcel Fee	S23
PM	DP = Day Old Poultry (14-2 only)	S25
PM	A = Day Old Poultry (14-1 only)	S25

Note: Extra Service Lines S17 and S19 use a .ccr Characteristic Type of F and .ccr Characteristic of PP and CB respectively.

5.17 Un-Coded Parcel Address Record (UPA)

Field	Acceptable Values	Required	Notes
Job ID	Alphanumeric	Required	Must match Job ID of header
Piece ID	Alphanumeric	Required	Unique ID of individual piece within a mailing
CQT Database ID	Numeric	Required	If numeric only, fill left with zeroes.
Address	Alphanumeric		Address line to be used for population of shipping services file. The values of a '#', '—' (en dash), or '—' (em dash) will be supported when populated by converting the values at upload to the following: Original Value : Converted Value '#' : '' '—' : '-' '—' : '-' All non-printable characters, extended ASCII codes and other characters which do not appear in Table 5-1 "ASCII Symbols Allowed are not supported.
UPA Record Status	O,D,I,U		
Reserve	Alphanumeric		
Closing Character	#		No characters are permitted after the closing character.

Table 5-33 Un-Coded Parcel Address Record – UPA

6. Periodicals Procedures

This Section contains the procedures for using the Ad % Basis, the edition weight worksheet, the advertising percentage worksheet, and the Centralized Periodicals Payment CPP payment request.

6.1 Ad % Basis

If your advertising percentage calculation already determines the advertising percentage of an edition populate the advertising percentage on only one component and do not populate the Ad % Basis . For mailers using several components where each carries their own advertising percentage the Ad % Basis is required for each of these components. The Component (CPT) Ad % Basis is only required when there are multiple components with an Periodical Ad% Treatment value of S. The Ad % Basis value must be greater than zero for each component with an Periodical Ad% Treatment value of S if there are multiple components with an Periodical Ad% Treatment value of S. Sample calculations are provided to relate the calculation of the Ad % Basis to each of the acceptable methods of advertising percentage measurement. The following excerpt is from the Periodicals Course offered by the NCSC and available to both postal personnel and customers. The sample calculations using Mail.dat data are inserted for this technical specification. The method selected must be applied to the entire publication. Attempts to combine methods will result in the wrong conclusion. The sample calculations provided here are consistent with the three methods as described in the DMM 707.17.4.5 Measuring Advertising.

The DMM 707.17.4.5 Measuring Advertising states: The total advertising and nonadvertising portions may be determined by column inches, square inches, pages, or by another recognized unit of measure if the same unit of measure is used for both portions. One full page of advertising must equal one full page of nonadvertising regardless of the amount of blank space between each advertisement or nonadvertising article on a page. If measured in column inches, nonadvertising inches are determined by subtracting the total measured advertising inches from the total column inches of the publication. A blank page, portion of a page, or blank border or margin is counted as advertising if consideration was received for the whole page, the blank portion, or the blank border or margin. The border of a page is otherwise considered neither advertising nor nonadvertising and is not measured, but it is included in the total weight of the publication for purposes of postage calculation. When measuring nonrectangular sheets, the measurement is based on the smallest rectangle that could contain the irregular sheet; exact measurement is not attempted. When two or more sheets are permanently glued together to form a single sheet, the surface area of the resulting sheet (front and back) is included when measuring the advertising or nonadvertising portion.

6.1.1 Method One: Page Measurement

Step One: Establish total number of pages of publication. Count all pages to arrive at the total number of pages in the periodical

Step Two: Establish total pages of advertising.

Count all full, half and quarter pages of advertising

Add all segments to determine the total number of pages devoted to advertising

Step Three: Establish percentage of advertising. Divide the advertising pages by the total pages to arrive at the advertising percentage

Only a few publications are designed to allow advertising to be calculated by this method.

Example Calculation for Method One Page Measurement:

A publication has two components: the main book (40 pages) with 45.12% advertising and a half page advertising blow-in printed on one side with 100% advertising. Ignore the decimal point stated in the Mail.dat file. Use pages times 10 as the basis. The multiplier 10 is arbitrary and could be whatever the publisher desired so long as it does not introduce round off error and is used consistently for all components describing the edition or mail piece unit. Set the value of ad percent basis to $40 \times 10 = 400$ for the main book and $0.5 \times 10 = 5$ for the component. The advertising percentage for the edition is ad percent basis for the main book multiplied by ad percent for the main book plus ad percent basis for the blow in multiplied by ad percent of the blow in all divided by the sum of the ad percent basis. $(400 \times 45.12 + 5 \times 100.00) / (400 + 5) = 45.80$.

6.1.2 Method Two: Column Inch

In publications that do not have numerous supplements the column inch method provides an easy way to measure advertising.

Examine the periodical to determine the average number of columns per page. This number becomes the standard for the entire publication. All pages will be measured by this standard even if they have a different number of columns.

For example: a periodicals publication has 12 pages. 8 pages have 2 columns, 2 pages have one column, 1 page has 15 columns and the last page has 8 columns. The average number of columns in this publication is 2.

Step One: Establish total column inches of publication

Pick a page that has the standard number of columns

Measure the length of the printed surface of a column on that page and multiply this number by the number of columns on the page. This establishes the number of column inches per page

Multiply the number of column inches per page by the number of pages in the publication. This is the total inches in the publication

Step Two: Establish total column inches of advertising

Measure the length of each advertisement on each page of the publication

Add all advertising inches for the total advertising inches in the publication.

Step Three: Establish percentage of advertising. Divide the total advertising inches by the total column inches to arrive at the advertising percent for the publication

Example Calculation for Method Two Column Inch:

A publication has two components: the main book (40 pages with two standard columns 9 long = 18/page) with 45.12% advertising and a half page (two columns times 0.5 pages times 18 inches) advertising blow-in printed on one side with 100% advertising. Ignore the decimal point stated in the Mail.dat file. Use column inches as the basis. Set the value of ad percent basis to $40 \times 18 = 720$ for the main book and $0.5 \times 18 = 9$ for the component. The advertising percentage for the edition is ad percent basis for the main book multiplied by ad percent for the main book plus ad percent basis for the blow in multiplied by ad percent of the blow in all divided by the sum of the ad percent basis. $(720 \times 45.12 + 9 \times 100.00) / (720 + 9) = 45.80$.

6.1.3 Method Three: Square inch

The square inch method provides us with the most accurate measurement. This method is most suitable when the printed pages of a publication are of a variety of column lengths and widths or if there are a large number of supplements of various sizes in the publication.

Step One: Establish total square inches of publication

Choose any page of the publication except the front page

Measure the length and width of the columns on the page

Multiply the length of the columns by the width to arrive at the total square inches on a page

Multiply the total square inches on the page by the number of pages to determine the total square inches in the publication

Step Two: Establish total square inches of advertising

Measure the length and width of the advertising on each page

Multiply the length by the width of the ads to arrive at the square inches

Repeat this process until all of the advertising on each page in the publication has been measured

Add all the advertising square inches to determine the total advertising inches in the publication

Step Three: Establish percentage of advertising. Divide the total advertising inches by the total square inches in the publication to determine the advertising percentage

Example Calculation for Method Three Square Inches:

A publication has two components: the main book (40 pages with two standard columns 9 long and 3 wide = 54 square inches/ page) with 45.12% advertising and a half page (one column 7 wide by 4 long = 28 square inches) advertising

blow-in printed on one side with 100% advertising. Ignore the decimal point stated in the Mail.dat file. Use square inches as the basis. Set the value of ad percent basis to $40 \times 54 = 2160$ for the main book and 28 for the component. The advertising percentage for the edition is ad percent basis for the main book multiplied by ad percent for the main book plus ad percent basis for the blow in multiplied by ad percent of the blow in all divided by the sum of the ad percent basis. $(2160 \times 45.12 + 28 \times 100.00) / (2160 + 28) = 45.82$. In this case the advertising percentage 45.82 is more accurate because the exact square inches were used for the blow in advertising.

6.1.4 Ad % Basis and the Mail.dat file

Advertising percentage previously at the mailpiece level (in prior Mail.dat versions) is at the component level. Furthermore to find an average advertising percentage to define the edition having multiple components an advertising basis was introduced. The advertising basis is freely definable by the publisher to correspond to page measurement, column inch measurement or square inch measurement.

However, in the postage calculation the advertising percentage in decimal format is multiplied by the weight of the edition to define the advertising pounds as distinct from the editorial pounds (weight of edition that is not included in the advertising pounds). See DMM sections 707.2.1.4 and 707.2.1.5.

The Mail.dat Component field ad percentage treatment of a component must have the value S for that component to be included in the ad percent calculation.

The default values (used when the field is left blank in the Mail.dat file) are for advertising percentage 0.00, for Ad percent treatment S, and when Ad percent treatment is S for Ad percent basis 100.

Since the ad percent basis is not a column in the ad percent worksheet, the ad percent basis cannot be changed except by sending an update to the Mail.dat file.

6.2 Advertising Percentage Treatment

The following values are allowed for the Component Periodical Ad% Treatment depending on the Component Advertising Percent value. For Periodicals, CPT Periodical Ad Percentage greater than or equal zero and less than or equal 100.00 is required if this field is S. If Component – Periodical Ad Percentage is blank, Periodical Ad% Treatment must Blank, B or N. If Component – Periodical Ad Percentage is zero, Periodical Ad% Treatment must Blank, B, N or S. If Component – Periodical Ad Percentage is greater than zero, Periodical Ad% Treatment must be B, N or S. Only components with a Periodical Ad% Treatment value of S will be allowed updates in the Advertising Percentage Worksheet.

Note: The Component file Ad % Basis value is required and must be greater than zero for each component with a Periodical Ad% Treatment value of S if there are multiple components with a Periodical Ad% Treatment value of S. The Component file Ad % Basis value of zero regardless if there are multiple components will generate a divide by zero error, if the Periodical Ad% Treatment value of S, and the job will fail.

Component – Periodical Ad Percentage Value	Allowable Component file: Periodical Ad % Treatment Values
Blank	Blank, B or N
Zero	Blank, B, N or S
Greater than zero	B, N or S

6.3 Edition Weight Worksheet

The edition weight worksheet is available for all Periodicals and pending Periodicals mailings.

Mail Owners and Mail Preparers can now view a new Edition Weight Worksheet that replaces the Piece-Weight Information link. The USPS Verified weight is entered by the USPS acceptance personnel and is used to calculate the postage. The Edition Weight Worksheet can be downloaded in PDF (.pdf), Excel (.xls) or CSV (.csv) formats.

The edition weight worksheet is based on Component (CPT) weight. Initial Weight is calculated by Mail.dat processing by adding the component weights for all components (CPT) associated with the mail piece unit (MPU) via the MPU/C Relationship (MCR) file where those components contribute to the copy weight according to Periodicals postage calculation rules. Subsequent updates to component weights in the Edition Weight Worksheet trigger recalculation of the copy weight by the same method as the initial calculation. Equivalent component weights allow mailers to identify

components as having an identical weight as another component. The worksheets support and allow modification of these equivalent relationships and values. The calculated weights are used to update the Postage Statements.

Once Weights and/or advertising percentage values are changed, overrides are set so that any subsequent updates through Mail.dat using the same mailpiece use the new weights and advertising percentage values from the worksheets.

6.4 Advertising Percentage Worksheet

The advertising percentage worksheet is available for all Periodicals and pending Periodicals mailings.

When Periodicals Postage Statements are submitted via Mail.dat, Mail Owners and Mail Preparers can now update the advertising percentage and view the Advertising Percentage Worksheet. Updating the advertising percentage will be allowed for postage statements in estimated or update stages. The final Advertising Percentage is used to calculate postage. The Advertising Percentage Worksheet can be downloaded in PDF (.pdf), Excel (.xls) or CSV (.csv) formats.

Initial advertising percentage for the Mail Piece Unit comes from Mail.dat processing and is derived using the following rules:

1. When multiple components make up a mailpiece the advertising percentage is calculated from the component Advertising Percentage, Advertising Percentage Treatment, and Ad % Basis values. All components with Periodical Ad% Treatment= S are used to calculate the advertising percentage using the following formula $(\text{Component_AD\%} \times \text{Component_AD\%_Basis}) / \text{Total_AD\%_Basis}$ which is calculated against each component and the results are added together. Where Total_AD%_Basis is the sum of all Ad % Basis values for all components with AD % Treatment = S.
2. When only one component makes up a mailpiece the Component Advertising Percentage is used without any consideration of Advertising Percentage Treatment, and Ad % Basis values.

Subsequent values are calculated for updates to the advertising percentage worksheet using the same formulas as in (1) and (2) above. Only components with a Periodical Ad% Treatment value of S will be allowed updates in the Advertising Percentage Worksheet. Note: the Ad % Basis values are not available for update in the Advertising Percentage Worksheet. Equivalent component advertising percentages allow mailers to identify components as having an identical advertising percentage as another component. The worksheets support and allow modification of these equivalent relationships and values. The calculated advertising percentages are used to update the Postage Statements.

Once Weights and/or advertising percentage values are changed overrides are set so that any subsequent updates through Mail.dat using the same mailpiece use the new weights and advertising percentage values from the worksheets.

6.5 Periodicals Postage – Additional Features

The postage statement register, postage statement register– entry facility detail, the version summary report, the listing by mailing date, and the entry facility listing by mailing date are available to all Periodicals mailers.

The link to access the periodicals postage statement register and its drilldowns is available on the postage statement when a consolidated postage statement is generated. A consolidated postage statement is generated when one of the postage statement generation variables (see Table – Key Postage Statement Consolidation Fields for Periodicals) triggers the creation of child postage statements. The link to access the periodicals postage statement register will not be active when the postage statement generation variables are identical within a mailing and the postage statement created is not consolidated.

The Issue level postage statement totals the issue level postage for all Periodicals postage statements submitted via the acceptance office entry, Postal Wizard entry, or Mail.dat entry. Postage statements via Mail.XML entry will be included in the issue level postage.

Consolidated Payment functionality is available to replace the Centralized Postage Payment for Periodicals Mailers (CPP) program. The system allows CPP customers to consolidate multiple Mail.dat jobs for a particular publication and issue at a single acceptance office (Detached Mail Unit (DMU) or Business Mail Entry Units (BMEU)) for payment. To use this feature, the CPP customer must have a CPP Agreement on file with the Pricing and Classification Service Center (PCSC). The customer must maintain on deposit, the amount of escrow funds indicated in the agreement and follow all other requirements of Publication 406 Guide to the Centralized Postage Payment (CPP) System for Periodicals Mail. For CPP mailings with enclosures, both the periodical statement and the enclosure statement are set to FPP (Finalized

Pending Payment) upon finalization by a postal employee. These enclosures will be paid with the rest of the mailing at the scheduled payment date. Additionally, mailers can select enclosure statements when scheduling payment requests.

Instructions on how to access the Edition Weight Worksheet, the Advertising Percentage Worksheet and the additional features described in this section are in the User Access to Electronic Mailing Information and Reports Guide available on [User Access Guides](#) and eDoc Process: A Guide for CPP Customers available on [A Guide for Centralized Postage Payment \(CPP\) Customers](#).

6.6 Standard Mail Postage for Pending Periodicals

For Mail.dat file submissions of Periodicals letters or flats during the pending period, Periodicals postage statements shall be mapped to the Standard Mail postage statement to determine postage due during the pending Period. For Mail.dat file submissions of Periodicals Parcels, the postal clerk enters the amount of pending postage due according to the PS Form 3605 supplied by the mailer. For letters and flats, the amount of postage due appears on the Periodicals postage statement and the system does not generate the detailed PS Form 3602 Standard Mail postage statement.

6.6.1 Firm Bundles

For Mail.dat file submissions of Periodical Firm Bundles using the Full-Service Intelligent Mail option, it is possible to serialize each copy in the bundle or maintain the bundle as one piece and include only one serial number. If the copies within the Periodical Firm Bundle are recorded separately, the system will expect each record to have a unique serial number and a separate .pdr/.pbc record. If the Periodical Firm Bundle is maintained as one piece, the system will expect the same serial number on each copy and only a single .pdr/.pbc record.

6.6.2 Mapping from Periodicals Flats to Standard Mail Flats – Zone DDU

The below table lists applicable mapping lines from Periodical Flats to Standard Mail Flats with Zone DDU.

Periodicals Line	Standard Mail Flats Line	3.3 oz or less	Over 3.3 and less than 16 oz	3.3 oz or less	Over 3.3 and less than 16 oz
In-County	Description	Carrier Route		Non-Automation	Non-Automation

Table 6-8 Mapping from Periodicals Letters to Standard Mail Letters – Zone None 1-9

6.7 Package Services Postage for Pending Periodicals

For Mail.dat file submissions of Periodicals letters or flats during the pending period, Periodicals postage statements shall be mapped to the Package Services postage statement to determine postage due during the pending Period. For Mail.dat file submissions of Periodicals Parcels, the postal clerk enters the amount of pending postage due according to the PS Form 3605 supplied by the mailer. For letters and flats, the amount of postage due appears on the Periodicals postage statement and the system does not generate the detailed PS Form 3605 Package Services postage statement.

7. Customer/Supplier Agreement Procedures

This Section contains the procedures on key fields that need to be identified when applying a Customer/Supplier Agreement (CSA) to the electronic documentation. These fields should match to the specific separation line entry for a given CSA ID. Upon Mail.dat postage statement finalization, the CSA Status must be Active and apply to a date on when the CSA is effective.

Following table illustrates key fields considered when applying the CSA to the Mail.dat.

No	CSA	Mail.dat		Notes
	Field Name	File	Field Name	
1	CSA ID	Segment (SEG)	CSA Agreement ID	This is assigned a numeric value by the Postal Service. Do not use leading zeroes.
2	Mail Class	Segment (SEG)	Class Defining Preparation	
3	Processing Category	Segment (SEG)	Principal Processing Category	
4	Processing Code	Container Summary (CSM)	Container Level Code	Does not apply for periodicals
5	Facility Locale Key	Container Summary (CSM)	Entry Point – Actual/Delivery – Locale Key	Locale Key should be provided in Mail.dat
6	Day of Week	Container Summary (CSM)	A) Scheduled Induction Date (applies only for BMEU & DMU-Verified Mailer Transported); B) Scheduled Ship Date (applies only for DMU-Verified USPS Transported)	The Date provided in the CSM record should fall within the Day of Week provided in the CSA.
9	Container Destination ZIP	Container Summary (CSM)	Container Destination ZIP	A) Does not apply for Air Separations B) CSM Container Destination ZIP must fall within the separation provided for the CSA. For example, 22202 CSM Container Destination ZIP can apply to 3 digit CSA Container Destination ZIP range of 200-250
10	Recurring Appointment Seq ID	Container Summary (CSM)	Reservation Number	Only applies for DMU-Verified Mailer Transported Note: Reservation Number can also be provided as an transportation update upon mail verification
11	Trip Number	Container Summary (CSM)	CSA Trip ID	Only applies for DMU-Verified USPS Transported or Unscheduled Trip

Table 7-1 CSA Data Integration with Mail.dat

8. Mapping Mail.dat Fields to Postage Statements

This Section displays the mappings of the Mail.dat fields to the postage statements. The five postage statements available for a Mail.dat submission are the PS Form 3600 First-Class and Priority Mail, the PS Form 3602 Standard Mail, the PS Form 3605 Package Services, and the PS Form 3541 Periodicals Mail.

8.1 Weight Validations

The following tables for each class list the validated minimum and maximum weights for each postage statement section.

8.1.1 First Class Mail

If there are no enclosures, the piece weight used to calculate pound postage for First-Class Mail is taken from the MPU file Mail Piece Unit – Weight field. If there are enclosures, the piece weight used to calculate pound postage for First-Class Mail is taken from the sum of the components.

Section Label	Processing Category	.cqt Rate Category	Min Wt.	Max Wt.
---------------	---------------------	--------------------	---------	---------

Section Label	Processing Category	.cqt Rate Category	Min Wt.	Max Wt.
Automation Prices	Cards Letters	E = 5-Digit Barcode H = 3-Digit Barcode L1 = AADC BC L2 = Mixed AADC BC	0 oz.	3.5oz
Automation Prices	Letters (Reply Rides Free)	E = 5-Digit Barcode H = 3-Digit Barcode L1 = AADC BC L2 = Mixed AADC BC	> 1oz	2oz
Automation Prices	Flats	E = 5-Digit Barcode H = 3-Digit Barcode L3 = ADC BC L4 = MxADC BC	0 oz.	13oz
Non-Automation Prices	Cards Letters	N = Basic Presort S = Single Piece	0 oz.	3.5oz

Commercial Base	Parcel, First Class (Commercial Base)	G = 5D Non Barcode K = 3D Non Barcode L5 = ADC Non-BC L6 = MxADC Non – BC S = Single Piece	0 oz.	13oz
Commercial Plus	Parcels, First Class (Commercial Plus)	G = 5D Non Barcode K = 3D Non Barcode L5 = ADC Non-BC L6 = MxADC Non – BC S = Single Piece	3.5oz (Can be equal to 3.5oz)	16oz (Cannot equal 16oz)
Repositionable Notes	Letters (Repositionable Notes) Cards (Repositionable Notes)	S = Single Piece	0 oz.	3.5oz
Repositionable Notes	Flats (Repositionable Notes)	S = Single Piece	0 oz.	13oz

Table 8-1 Weight Validations – First Class Mail

8.1.2 Periodicals and Pending Periodicals

The piece weight used to calculate pound postage for Periodicals mail is calculated by summing the components CPT file Component – Weight related to the MPU ID by the MCR file. This piece weight may be later updated by the Edition Weight worksheet described in Section 6.3. For Periodicals Mail the advertising percentage is calculated by summing the components CPT file Component – Periodical Ad Percentage related to the MPU ID by the MCR file. This advertising percentage may be later updated by the Advertising Percentage worksheet described in Section 6.4.

Processing Category	Flat Machinability	Min Wt.	Max Wt.
Flats	Y = Machinable on ASFM 100	0 oz.	22oz
	U = Machinable on USFM 1000	0 oz.	4.4lbs.
Letters	N/A	0 oz.	16oz

Table 8-2 Weight Validations – Periodicals and Pending Periodicals

8.1.3 Standard Mail

If there are no enclosures, the piece weight used to calculate pound postage for Standard Mail is taken from the MPU file Mail Piece Unit – Weight field. If there are enclosures, the piece weight used to calculate pound postage for Standard Mail is taken from the sum of the components.

8.2 Mail.dat Postage Statement Mapping

The following section contains the updated postage statement mappings for the August 2014 release for First Class Mail, Periodicals, Standard Mail, Package Services, and Priority Mail postage statements. The mapping ingredients vary by postage statement and section. Grayed out lines are lines that are not supported by PostalOne! and will result in a mapping error. Subtotal, Total, and Full Service Intelligent Mail lines are listed for reference.

For the August 2014 release, rate categories of PR, PQ, PK, PI, PE, PG, P5, and P6 will no longer be valid values in the .cqt Rate Category field in Mail.dat version 14-2 and above. Affected lines are noted in the mappings that follow with the new corresponding rate category. If using IDEAlliance version 14-1 the lines will still map correctly using the old rate category. The following keys are provided to relate the rate ingredients in the mappings below to the values in the Mail.dat file.

Rate Ingredient	Mail.dat record and field
DESTINATION_ENTRY	CQT Destination Entry
PROCESS_CATEGORY	MPU Mail Piece Unit – Processing Category
RATE_CATEGORY	CQT Rate Category
RATE_TYPE	CPT Component Rate Type
ZONE	CQT Zone
IN COUNTY/OUT COUNTY	CQT Periodicals: Not County/In County
MACHINABLE	multiple See Section 5.3.2, Mail Piece Unit – Flat Machinability Values for Periodicals Mailings
MPU SURCHARGE	MPU Surcharge
RATE SCHEDULE	MPU Rate Schedule
FCM LETTER RESIDUAL PREP INDICATOR	SEG FCM Letter Residual Preparation Indicator
CONTAINER LEVEL	CSM Container Level
PACKAGE LEVEL	PQT Package Level
ENTRY POINT FOR ENTRY DISCOUNT	CSM Entry Point for Entry Discount – Facility Type
SIMPLIFIED ADDRESS INDICATOR	CQT Simplified Address Indicator

Field Description MPU_SURCHARGE		Mail.dat field name and record		
Description	Value	MPU Surcharge (MPU)	Component Rate Type (CPT)	Rate Category CQT)
First-Class Mail Parcel Surcharge	A			L6 or S
Dimensional Rate	D	D		
Permit Reply Mail	E		I	
Not Oversized	N	N		
Balloon surcharge	P	P		
First-Class Mail Nonmachinable Letters (0.0625 lbs. or less)	R	Based on Rate Category and MPU Weight		
Single Piece	V			S

8.2.1 First-Class Mail and First-Class Package Service PS 3600

- Section C lines 7, 8, 9, 10, and 11 mapped using a .mpu Rate Schedule of P = Commercial Plus must have an associated Commercial Plus Pricing permit.

9. Status Receipt File Layout

This Section contains details about the contents of a Status Receipt file and associated record formats.

Note: *Postage statement receipt files are not available; only status receipt files are available.*

9.1 Status Receipt File Content

The receipt file conforms to these specifications:

A receipt file shall contain one or more records represented by ASCII text or XML. The text shall be in the subset of ASCII characters indicated by the decimal values 33 to 126.

A new line character or sequence of characters (this is platform dependent) shall terminate each record.

The records of a receipt file shall contain a predefined character that shall serve to distinguish its fields. The default character shall be a comma ,.

Note: *Customize the delimiter character by changing the status.receipt.field.delimiter parameter in the MDRSETTINGS.CONF file . For more information, see Batch Processing.*

The receipt file record may have various types. Only one record type has been specified at this point.

A record in a receipt file shall commence with a record-type field that shall serve in the records identification. Following the record-type field shall be various character-delimited fields following a predefined sequence.

New Receipt functionality will provide post finalization internal error codes and error messages in ASCII, XML and Enhanced XML file formats for the following post finalization events: postage statement finalization, postage statement reversal, postage statement cancel, Mailing Group delete, MyPost and Shipping Services File creation.

9.2 Record Format

This Section provides details about the receipt files record formats. For additional information about MDRSETTINGS.CONF parameters, see Batch Processing.

Record Type: status receipts

The *PostalOne!* system allows Batch Processor users to receive Mail.dat transaction confirmations in the form of Status Receipt files. The Status Receipt file indicates the successive stages of a Mail.dat transaction being processed and can be transmitted in three formats: ASCII, XML, and Enhanced XML.

9.2.1 ASCII Receipt File Format

The ASCII Status Receipt file will display all field names and events on one line for a single job submission. The field names and events will be separated by the delimiter selected by the user via the MDRSETTINGS.CONF file or the MDR client application. The user will need to count the field positions to determine which events are populated in the Status Receipt file. The first event will appear immediately after the date-time field. The last event will appear immediately before the error-code field. The following is tracked as issue 60111: There is an extra space at the end of each record and there is an extra empty line at the end of the file. See the *PostalOne!*® Issues List for the scheduling of the issue fix at <http://ribbs.usps.gov/index.cfm?page=intellmaillatestnews>.

The current record type for *PostalOne!* Status Receipt files is: transfer-status.

The transfer-status record shall serve to indicate the progress of the processing of a Mail.dat file transferred to the *PostalOne!* Java upload server. The record shall trace, through its fields, the validation, the loading, and the processing of postage statements for a Mail.dat file transfer. The format for job status records is as follows:

transfer-status<char-del>version<char-del>jobid<char-del>filename<char-del>verification-facility<char-del>zip+4<char-del>date-time<char-del>client-validation<char-del>job-acceptance<char-del>insert<char-del>PS-gen<char-del>PS-canceled<char-del>PS-fin<char-del>mpu-edit<char-del>error-code<char-del>error-msg<char-del>server-validation<char-del>job-deleted<char-del>job-status<new-line>

9.2.1.1 Field Descriptions

transfer-status: represents the literal text that will be placed at the beginning of a transfer-status record.

<char-del>: represents the ASCII character used as the field delimiter.

Version: the version of this receipt file. (e.g. 1.0)

jobid: the Mail.dat Job ID as presented in the header file specification of Mail.dat.

filename: the part of the name of a Mail.dat file without the extension. For example, if the files sent are fooHDR, fooCSM and fooCQT, the filename is foo. If the receipt record is for a finalized, a canceled or a reversed postage statement, this record will contain the container ID of one of the containers that was finalized, canceled, or reversed.

Verification-facility-zip+4: The ZIP+4 Code of the mailing facility where verification occurred.

Date-time: a time stamp, represented in the 24 hour time system, which indicates the creation or the receipt of a file. The Java upload server provides the time that is used.

Client-validation: a binary value of P or F indicating successful client validation or failed client validation, respectively, of a Mail.dat file.

Job-acceptance: a binary value of P or F indicating whether a file has been successfully loaded to the Java upload servers data repository for loading to a database.

Insert: a binary value of P or F indicating the successful loading of a job from the Java upload servers data repository to the database.

PS-gen: a Boolean value of T or F indicating whether a postage statement has been generated or has not been generated.

PS-canceled: a value of C or <empty> indicating whether a postage statement has been canceled or no action has been taken, respectively.

PS-fin: a value of F, R or <empty> indicating whether a postage statement has been finalized, reversed or no action has been taken, respectively.

Mpu-edit: a value of T or <empty> indicating whether an mpu edit has occurred on the front-end or not. This field is not currently populated by *PostalOne!*, so it will always be <empty>.

Error-code: a numeric error code generated by the *PostalOne!* Java upload server that represents the occurrence or absence of an error. A zero in the field indicates the absence of error.

Error-msg: a message generated by the *PostalOne!* Java upload server that describes, with brevity, an error or warning that has occurred. If there is no error or warning, this field will be empty.

Server-validation: a binary value of P or F indicating successful server validation or failed server validation, respectively, of a Mail.dat file.

Job-deleted: a Boolean value of T or F indicating whether a postage statement has been deleted or has not been deleted.

Job-status: a value of F, R, or <empty> indicating whether a postage statement has been finalized, reversed, or if no action has been taken.

<new-line>: the platform-specific new line character sequence.

9.2.2 XML Receipt File Format (Existing XML)

The following is the XML schema for Status Receipts:

The current record type for *PostalOne!* Status Receipt files is: transfer-status.

9.2.2.1 Field Descriptions:

transfer-status: represents the literal text that will be placed at the beginning of a transfer-status record.

Version: the version of this receipt file. (e.g. 1.0)

jobid: the Mail.dat Job ID as presented in the header file specification of Mail.dat.

filename: the part of the name of a Mail.dat file without the extension. For example, if the files sent are fooHDR, fooCSM and fooCQT, the filename is foo. If the receipt record is for a finalized, a canceled or a reversed postage statement, this record will contain the container ID of one of the containers that was finalized, canceled, or reversed.

Verification-facility-zip+4: The ZIP+4 Code of the mailing facility where verification occurred.

Date-time: a time stamp, represented in the 24 hour time system, which indicates the creation or the receipt of a file. The Java upload server provides the time that is used.

Job-status: a value of "F", "R", or <empty> indicating whether a postage statement has been finalized, reversed, or if no action has been taken.

Client-validation: a binary value of P or F indicating successful client validation or failed client validation, respectively, of a Mail.dat file.

Job-acceptance: a binary value of P or F indicating whether a file has been successfully loaded to the Java upload servers data repository for loading to a database.

Insert: a binary value of P or F indicating the successful loading of a job from the Java upload servers data repository to the database.

PS-gen: a Boolean value of T or F indicating whether a postage statement has been generated or has not been generated.

PS-canceled: a value of C or <empty> indicating whether a postage statement has been canceled or no action has been taken, respectively.

PS-fin: a value of F, R or <empty> indicating whether a postage statement has been finalized, reversed or no action has been taken, respectively.

Mpu-edit: a value of T or <empty> indicating whether an mpu edit has occurred on the front-end or not. This field is not currently populated by *PostalOne!*, so it will always be <empty>.

Error-code: a numeric error code generated by the *PostalOne!* Java upload server that represents the occurrence or absence of an error. A zero in the field indicates the absence of error.

Error-msg: a message generated by the *PostalOne!* Java upload server that describes, with brevity, an error or warning that has occurred. If there is no error or warning, this field will be empty.

Server-validation: a binary value of P or F indicating successful server validation or failed server validation, respectively, of a Mail.dat file.

Job-deleted: a Boolean value of T or F indicating whether a postage statement has been deleted or has not been deleted.

9.2.3 Enhanced XML Receipt File Format

The following is the Enhanced XML schema for Status Receipts supported in Release 24.0. This file format is built on the existing XML Receipt File Layout but includes additional fields for newly supported events and additional data returned

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema" elementFormDefault="qualified"
attributeFormDefault="unqualified">

9.2.3.1 Field Descriptions:

transfer-status: represents the literal text that will be placed at the beginning of a transfer-status record.

Version: the version of this receipt file. (e.g. 1.0) This will be 2.0 for the Enhanced XML format.

Jobid: the Mail.dat Job ID as presented in the header file specification of Mail.dat.

filename: the part of the name of a Mail.dat file without the extension. For example, if the files sent are fooHDR, fooCSM and fooCQT, the filename is foo. If the receipt record is for a finalized, a canceled or a reversed postage statement, this record will contain the container ID of one of the containers that was finalized, canceled, or reversed.

Verification-facility-zip+4: The ZIP+4 Code of the mailing facility where verification occurred.

Submitter-CRID: The CRID of the submitter

date-time: a time stamp, represented in the 24 hour time system, which indicates the creation or the receipt of a file. The Java upload server provides the time that is used.

Job-status: a value of "F", "R", or <empty> indicating whether a postage statement has been finalized, reversed, or if no action has been taken.

Hdr-history-sequence-id: this represents the current Historical Header ID for the Mail.dat submissions that triggered the event. If the event did not originate during the processing of Mail.dat, this field is not available

reject-job: This will only appear if the client rejects the job for validation and will have a value of F

client-validation: a binary value of P or F indicating successful client validation or failed client validation, respectively, of a Mail.dat file.

Job-acceptance: a binary value of P or F indicating whether a file has been successfully loaded to the Java upload servers data repository for loading to a database.

Insert: a binary value of P or F indicating the successful loading of a job from the Java upload servers data repository to the database.

Qual-generated: a binary value of Y or N to reflect whether a qualification report was generated by the submission

PS-gen: a Boolean value of T or F indicating whether a postage statement has been generated or has not been generated.

PS-canceled: a value of C or <empty> indicating whether a postage statement has been canceled or no action has been taken, respectively.

PS-fin: a value of F, R or <empty> indicating whether a postage statement has been finalized, reversed or no action has been taken, respectively.

Rtp-tx-id: This reflects the Postage Statement ID assigned by *PostalOne!*. This will only appear if the user has elected to receive statement data at the submission or billable level.

Container id: for statement Mail.dat related events, it reflects the first CSM Container ID related to the statement. This record will only appear if the user has elected to receive statement data at the submission or billable level.

Mail-group-id: reflects the Mail Grouping ID by *PostalOne!*

cust-group-id: reflects the Postage Grouping ID which for Mail.dat submissions will be the same as the Job ID.

Total-pieces: reflects the Total Pieces in the postage statement referenced by this receipt record. This will only appear if the user has elected to receive statement data at the submission or billable level.

Total-copies: reflects the Total Copies in the postage statement referenced by this receipt record. This will only appear if the user has elected to receive statement data at the submission or billable level.

Total-postage: reflects the Total Postage in the postage statement referenced by this receipt record including all adjustments and postage affixes deductions. This will only appear if the user has elected to receive statement data at the submission or billable level.

Container-status: reflects the Container Status, which will be P when all containers are Preliminary, R when all containers are Ready to Pay, or N/A when there are containers with differing container statuses (such as for a master statement).

Mpu-edit: a value of T or <empty> indicating whether an mpu edit has occurred on the front-end or not. This field is not currently populated by *PostalOne!*, so it will always be <empty>.

Error-code: a numeric error code generated by the *PostalOne!* Java upload server that represents the occurrence or absence of an error. A zero in the field indicates the absence of error.

Error-msg: a message generated by the *PostalOne!* Java upload server that describes, with brevity, an error or warning that has occurred. If there is no error or warning, this field will be empty.

Server-validation: a binary value of P or F indicating successful server validation or failed server validation, respectively, of a Mail.dat file.

Job-deleted: a Boolean value of T or F indicating whether a postage statement has been deleted or has not been deleted.

Incentive: a block that displays the incentive information for a postage statement.

Incentive-claimed: displays the incentive information that was claimed for a postage statement.

Incentive-type: displays the incentive that was claimed for a postage statement.

Incentive-pieces: displays the number of pieces that was claimed for the incentive for a postage statement.

Incentive-discount-ttl: Displays the total discount of an incentive claimed for a postage statement.

9.3 Postage Statement Filter

In Release 24.0, a new Receipt File Settings parameter was added to allow selection between two levels of detail for postage statements. The Submission Level returns the same results as prior to Release 24.0, a single receipt per job submission. The Billable Level includes additional details for each billable statement.

Submission Level – Submission level is the basic postage statement filter that can be used for the Status Receipt files. All postage statement events will be populated on one line for the ASCII format and one block for the XML formats. If multiple postage statements are generated for a single job submission, then the system will populate events for the last postage statement that was generated. If the Submission Level filter is selected, events will not be populated for every postage statement that was generated.

Sample ASCII Format Status Receipt – Submission Level:

transfer-status,1.0,RGSITB66,Scenario66,53590-3220,2010-03-24 11:13:10,P,P,P,T,,F,0,P,T,R

This Status Receipt shows the events that are populated for the last postage statement that was generated on a single line.

Sample XML Format Status Receipt – Submission Level:

```
<?xml version=1.0?>
<receipts>
<record-type>
    <version>1.0</version>
```

    <incentive-discount-ttl>300</ incentive-discount-ttl>
  </incentive-claimed>
</incentive>
</record-type>

```

```
</receipts>
```

This Status Receipt shows the events that are populated for the last postage statement that was generated in a single block.

9.3.1 Billable Level

Billable level is the detailed postage statement filter that can be used for the Status Receipt files. All postage statement events will be populated on one line for the ASCII format and one block for the XML formats. If multiple postage statements are generated for a single job submission, then the system will populate all events for each postage statement on a separate line for the ASCII format or a separate block for the XML formats

Sample ASCII Format Status Receipt – Billable Level:transfer-status,1.0,RGSITY17,UpdScenario17,20260-2026,2010-04-22 11:13:29,P,P,P,T,,,0,P,T, transfer-status,1.0,RGSITY17,UpdScenario17,20260-2026,2010-04-22

11:13:29,P,P,P,T,,,0,P,T,R This Status Receipt shows all of the events that are populated for each postage statement that was generated on separate lines.

Sample XML Format Status Receipt – Billable Level:

```
<?xml version=1.0?>
```

```
<receipts>
```

```
  <record-type>
```

```

    <version>1.0</version>

10. Error Code Structure

The *PostalOne!* system is implementing a new error code structure to provide mailers a more efficient process to find and resolve Mail.dat file processing errors. Part of the new error code structure includes making available downloadable files of all Mail.dat error codes on RIBBS. Files will be provided in an MS Excel and XML format (Mail_Dat Error Codes.xls and Mail_Dat Error Codes.XML).

The following fields will be provided on both MS Excel and XML files:

- **ERROR CODE:** The error or warning code which will display in the client after validation or server processing of the Mail.dat files.
- **ERROR TYPE:** Displays the error thrown as either an Error or a Warning.
- **ERROR DISCRIPTION:** The error or warning message text which will also be displayed in the client after validation or server processing of the Mail.dat files.
- **ACTION:** Action or actions that can be taken to correct the issue causing the error or warning to be thrown.
- **KEY ID:** Used to help mailers determine on which record an error occurred in a given file.

Key ID Example:

File: .csm

Key ID: Container ID 000001

Segment ID 0001

Key IDs are available on the Mail.dat IDEAlliance Database Standard file in the Mail.dat Database Design Chart.

10.1 Format for Error Codes in XML

```
<xs:element>
```

```
<xs:element name=ERRORS>
```

```
<xs:complexType>
```

```
<xs:all>
```

```
</xs:element>
```

```
<xs:element name=ERROR>
```

```

</xs:all>
  <xs:element name=NAME>
    <xs:annotation>
      <xs:documentation>The NAME is the field name of the KEY_ID within the
Mail.dat files. This KEY_ID is identified using the Mail.dat IDEAlliance Database Standard which documents each files
KEY_ID, as well as file relationships.</xs:documentation>
    </xs:annotation>
    <xs:element name=VALUE>
      <xs:annotation>
        <xs:documentation>The VALUE is the value with which the
KEY_ID field is populated within the Mail.dat files.</xs:documentation>
      </xs:annotation>
    </xs:element>
  </xs:complexType>
</xs:all>
</xs:element>

```

10.2 Format for Error Codes in MS Excel (.xls file)

ERROR_CODE	ERROR_TYPE	ERROR_DISCRIPTION	ACTION	KEY_ID
The error or warning code which will display in the client after validation or server processing of the Mail.dat files.	Displays the error thrown as either an Error or a Warning	The error or warning message text which will also be displayed in the client after validation or server processing of the Mail.dat files.	Action or actions that can be taken to correct the issue causing the error or warning to be thrown.	Field Name and Value of KEY_ID are displayed.

10.3 Issue Resolution

Some error messages will suggest a specific step to resolve the error, such as checking the client.config file, resubmitting the job, or correcting data (if a data issue is involved) and then resubmitting.

If no resolution is suggested:

1. Verify the machine has the correct software and versions of the software.
2. Verify any settings in the client.config file are correct. (Batch processing users only)
3. Verify the Internet connection is available.
4. Check the *PostalOne!* site to see if an outage has been posted.
5. Verify the machine has sufficient memory for sending files of this size.
6. Verify the all of the data being sent is in the correct format, and does not conflict with other data in the files or postal regulations for the claimed mail classes and rates. To successfully resolve a data issue, correct the data error(s) before resubmitting the file.

There are several issues with work-arounds to obtain the correct results. These work arounds affect the format of the Mail.dat file. In some cases the work around is to submit the postage statements manually. For manual postage statement entry, while it is possible to allow the full-service discount where eligible, it is not possible to return the expected data (ACS or Start-the-Clock) for these mailings

10.4 Processing Order

Mail.dat submissions are processed in the following order: Mail.dat Client validation, Upload, and Server validations and processing.

Mail.dat Client

Words in brackets and italics, such as (number), indicate a value automatically added to the error message by the *PostalOne!* system. For example, the maximum size of a specific field might be inserted if that maximum was exceeded.

Mail.dat Pre-Validation Errors:

Pre-Validation errors are thrown prior to client side validations. These errors are thrown when data is setup incorrectly and does not meet the minimum requirements to begin client side validations.

11. Error Messages

This Section contains a list of error messages generated during manual or batch file processing. Error messages may appear in one or more of the following places:

- In the Validation.log file. By default, the file is on the machine in C:\Validation.log. This option is only available to manual file processing users.
- In the batch processor logs. See Server#.log (# = 1 to n) for general status information, and User#.log (#1 = 1 to n) for transfer error messages containing the error codes and messages as shown in this section. This option is only available to batch processing users.
- In the Client application. To view error messages, select the Mail.dat submission from the Validation/Upload History screen. The details screen will display with the errors for that Mail.dat submission.

To assist in troubleshooting, database error messaging for Mail.dat validation has been updated to generate an error message documenting the specific data fields provided in the Mail.dat file submission when the statement does not map to any rates for each mail class

11.1 Mail.dat Pre-validation Error Messages

This is a list of all the possible Mail.dat pre-validation error messages from the Mail.dat Client application.

Error Code	Mail.dat Pre-validation Error Message	Action	Error Location
N/A	A <file name> was specified in the hdr file but cannot be found.		Multiple Files
N/A	Error loading Mail.dat specification. (This error occurs for several reasons one being a Mail.dat version that is not supported.)		Multiple Files
N/A	Your account does not have access eDoc Sender CRID:: <XXXXXXXX>		.seg
N/A	The eDoc Sender CRID in the <XXXXXXXX> job does not match the eDoc Sender CRID in the Original job.		.seg
N/A	The following files were specified in the hdr file but cannot be found: <files>		Multiple Files
N/A	Mail.dat file submissions with .hdr IDEAlliance Version 08-2 are no longer supported.		.hdr
N/A	.csm file must be included for this submission.		.csm
0591	For File Updates Processing, an original Mail.dat must have been submitted before an update can be made.	Submit an original job before attempting to submit an update job.	Updates
0594	This job cannot be deleted because of an associated finalized postage statement.	Do not attempt to delete jobs when the postage statement for the corresponding job has been finalized.	Deletes
0596	For File Updates Processing, the .hdr Mail.dat Software Version field must match between the original job and update job submitted	Populate the .hdr Mail.dat Software Version field with the same value for original and update job submissions.	Updates
3623	<File name> File status <status> does not match the header file status <status>.		.hdr
3624	The original job getting inserted already exists.	Change the Job ID in all files and resubmit the job.	Multiple Files
3625	The .hdr Header Historical Sequence Number field must be decremented for any updates to the original job.	Populate the .hdr Header Historical Sequence Number field with a value that is decremented from the original job.	.hdr

Error Code	Mail.dat Pre-validation Error Message	Action	Error Location
3673	The job submitted is currently being processed.	Allow original job to complete processing before submitting an update job.	Multiple Files
3997	The .hdr User License Code field is required for all job submissions.	Populate the .hdr User License Code field.	.hdr
4034	For Full-Service or Mixed Service mailings, only one of the .pdr, .imr, or .pbc files can be submitted in the same Mail.dat job.	Include only one the .pdr, .imr, or .pbc files for Full-Service or Mixed Service mailings.	Multiple Files
4283	Identical job is currently being processed.	Populate the Job ID field in every file and resubmit the job.	Multiple Files

Table 11-1 Mail.dat Pre-validation Error Messages

11.2 Mail.dat Client Error Messages

This is a list of all the possible Mail.dat Client file validation error messages from the Mail.dat Client.

Error Code	Mail.dat Client Error Message	Action	Error Location
0002	For Mixed Full-Service Processing, the .seg Class Defining Preparation value provided was {}; it must contain 1=First class, 2=Periodicals, 3=Std mail, 4=Pkg Services, or 6= Std/Periodicals Co-Mailings.	Populate .seg Class Defining Preparation field with 1 = First Class, 2 = Periodicals, 3 = Std Mail, 4 = Pkg Services, or 6 = Std/Periodicals Co-Mailings.	.seg
0003	For Mixed Full-Service Processing, the .mpu Mail Piece Unit – Rate Type value provided was {1}; it must contain B = Bound Printed Matter, R = Regular (US/MEX/CAN), N = Nonprofit, S = Science of Agriculture, C = Classroom, W = Science of Agriculture Limited Circulation, Y = Regular Limited Circulation, D = Parcel Select, or P = Parcel Post.	Populate the .mpu Mail Piece Unit – Rate Type field with B, R, N, S, C, W, Y, D, or P.	.mpu
0004	For Mixed Full-Service Processing, the .mpu Mail Piece Unit – Processing Category value provided was {}; it must contain LT = Letters, FL = Flats, or CD = Cards.	Populate .mpu Mail Piece Unit – Processing Category field with LT = Letters, FL = Flats, or CD = Cards.	.mpu
0006	For Mixed Full-Service Processing, the .mpa Postage Payment Method contains an invalid value; it must contain P = Permit S = Stamp G = Govt – Fed (use Permit) L = Metered: Lowest C = Metered: Correct M = Metered: Neither or T = Per Pend (using Permit).	Populate .mpa Postage Payment Method field with P, S, G, L, C, M or T.	.mpa
0007	The value provided For Mixed Full-Service Processing, the .cpt Component Class contains was {}; it must contain 1 = First Class 2 = Periodicals 3 = Std Mail 4 = Pkg Services or 5 = Per Pending.	Populate the .cpt Component – Class field with 1, 2, 3, 4, or 5.	.cpt

Error Code	Mail.dat Client Error Message	Action	Error Location
0008	The value provided For Mixed Full-Service Processing, the .cpt Component Rate Type was {} when the .seg Class Defining Preparation field is populated with 1 = First Class ; it must contain R = Regular (US/MEX/CAN) N = Nonprofit M = Repositionable Component I = First Class Permit Reply Mail or Z – Included, part of host postage	Populate .cpt Component – Rate Type field with R, N, M, I, or Z.	.cpt
0009	The value provided For Mixed Full-Service Processing, the .cpt Component Rate Type was {} when the .seg Class Defining Preparation field is populated with 2 = Periodicals; it must contain R = Regular (US/MEX/CAN) N = Nonprofit S = Science of Agriculture C = Classroom W = Science of Agriculture Limited Circulation Y = Regular Limited Circulation H = Per Ride-Along Z – Included, part of host postage or M = Repositionable Component	Populate .cpt Component – Rate Type field with R, N, S, C, W, Y, H, Z or M.	.cpt
0012	For MLOCR mailings, the jobs can only contain one segment record.	Include only one segment record in data set.	.seg
0013	For MLOCR Mailings, the .seg Class Defining Preparation value provided was {1}; it must be populated with 1 = First Class or 3 = Standard Mail.	Populate .seg Class Defining Preparation field with 1 = First Class or 3 = Standard Mail.	.seg
0017	For MLOCR Mailings, the .mpu Mail Piece Unit – Weight must be less than or equal to 1 ounce when the .mpu Mail Piece Unit – Processing Category is populated with LT = Letters or CD = Cards, the .mpa Postage Payment Method is populated with S = Stamp, and the .mpu Mail Piece Unit – Class field is populated with populated with 1 = First Class. The value provided was {1}.	Populate the .mpu Mail Piece Unit – Weight field with a value that is less than or equal to 1 oz.	Multiple files
0018	For MLOCR Mailings, the .mpu Mail Piece Unit – Weight must be less than or equal to 3.3 ounces when the .mpu Mail Piece Unit – Processing Category is populated with LT = Letters, the .mpa Postage Payment Method is populated with S = Stamp, and the .mpu Mail Piece Unit – Class field is populated with 3 = Std Mail. The value provided was {1}.	Populate the .mpu Mail Piece Unit – Weight field with a value that is less than or equal to 3.3 oz.	Multiple files
0019	For MLOCR Mailings, the .mpu Mail Piece Unit – Weight must be less than or equal to 3.3 ounces when the .mpu Mail Piece Unit – Processing Category is populated with LT = Letters or CD = Cards, the .mpa Postage Payment Method is populated with L, C, P, G or M, the .mpu Mail Piece Unit – Class field is populated with 1 = First Class, and the .cqt Rate Category field is populated with E, H, L1, L2, L3 or L4. L = Metered: Lowest, C = Metered: Correct, P = Permit, G = Gov't – Fed (use Permit), M = Metered: Neither, E = 5 Digit Barcode, H = 3 Digit Barcode, L1 = AADC BC, L2 = MxAADC BC, L3 = ADC BC, L4 = MxADC BC.	Populate the .mpu Mail Piece Unit – Weight field with a value that is less than or equal to 3.3 oz.	Multiple files

Error Code	Mail.dat Client Error Message	Action	Error Location
0020	For MLOCR Mailings, the .mpu Mail Piece Unit – Weight must be less than or equal to 13 ounces when the .mpu Mail Piece Unit – Processing Category is populated with FL = Flats, the .mpa Postage Payment Method is populated with L, C, P, G or M, and the .mpu Mail Piece Unit – Class field is populated with 1. L = Metered: Lowest, C = Metered: Correct, P = Permit, G = Gov’t – Fed (use Permit), M = Metered: Neither, 1 = First Class. The value provided was {1}.	Populate the .mpu Mail Piece Unit – Weight field with a value that is less than or equal to 13 oz.	Multiple files
0021	For MLOCR Mailings, the .mpu Mail Piece Unit – Weight must be less than or equal to 3.3 ounces when the .mpu Mail Piece Unit – Processing Category is populated with LT = Letters, the .mpa Postage Payment Method is populated with L, C, P, G or M, and the .mpu Mail Piece Unit – Class field is populated with 3. L = Metered: Lowest, C = Metered: Correct, P = Permit, G = Gov’t – Fed (use Permit), M = Metered: Neither, 3 = Std Mail.	Populate the .mpu Mail Piece Unit – Weight field with a value that is less than or equal to 3.3 oz.	Multiple files
0022	For MLOCR Mailings, there cannot be more than 13 different weight increments when the .mpa Postage Payment Method field is populated with P, the .seg Class Defining Preparation field is populated with 1= First Class, and the .mpu Mail Piece Unit – Processing Category field is populated with FL=Flats.	Do not include more than 13 different weight increments when the .mpa Postage Payment Method field is populated with P, the .seg Class Defining Preparation field is populated with 1, and the .mpu Mail Piece Unit – Processing Category field is populated with FL.	Multiple files
0027	For MLOCR Mailings, the .seg Barcode Verifier Indicator field value provided was {1}; it must contain either Y = Yes or N = No.	Populate .seg Barcode Verifier Indicator field with Y = Yes or N = No.	Multiple files
0031	For MLOCR Mailings, barcode data is not permitted in the .csm file when the .csm Container Type is set to M = Logical Pallet (MLOCR). The value provided was {1}.	Do not include barcodes.	Multiple files
0032	For MLOCR Mailings, the .mpa Postage Payment Method field value provided was {1}; it must contain L = Metered: Lowest C = Metered: Correct P = Permit M = Metered: Neither G = Gov’t – Fed (use Permit) or S = Stamp when the .seg Class Defining Preparation field is populated with 1 = First Class and the .mpu Mail Piece Unit – Processing Category field is populated with LT = Letters or CD = Cards.	Populate .mpa Postage Payment Method field with L, C, P, M, G, or S.	.mpa
0033	For MLOCR Mailings, the .mpa Postage Payment Method field value provided was {1}; it must contain L = Metered: Lowest C = Metered: Correct P = Permit M = Metered: Neither G = Gov’t – Fed (use Permit) when the .mpu Mail piece Unit – Processing Category is populated with FL = Flats.	Populate .mpa Postage Payment Method field with L, C, P, M, or G.	.mpa
0034	For MLOCR Mailings, the .mpu Mail Piece Unit – Class must match the class in the associated .seg and .cpt file(s).	Populate the .mpu Mail Piece Unit – Class field with a value that is identical to that in the .seg and .cpt files	Multiple files

Error Code	Mail.dat Client Error Message	Action	Error Location
0035	For MLOCR Mailings, which are not Simple Mailings, there must be at least one container quantity record present in .cqt file and one package quantity record in the .pqt file for each container summary record present in the .csm file when container type is populated with L for logical tray. The value provided was {1}.	Include a .cqt record and .pqt record for each .csm record in a job, which is not a Simple Mailing.	Multiple files
0036	For MLOCR Mailings, the .mcr Additional Postage MPA ID field must be populated when the .mpa Postage Payment Method field is populated with G = Gov't – Fed (use Permit) S = Stamp C = Metered: Correct L = Metered: Lowest M = Metered: Neither .The value provided was {1}.	Populate the .mcr Additional Postage MPA ID field when the .mpa Postage Payment Method field is populated with G, S, C, L, or M.	Multiple files
0039	For MLOCR Mailings, there must be at least one .mpu Mail Piece Unit – Processing Category populated with LT = Letters, FL = Flats, or CD = Cards for each segment record. The value provided was {1}.	Populate the .mpa Mail Piece Unit – Processing Category field with LT = Letters, FL = Flats, or CD = Cards.	Multiple files
0045	For File Cancellation or Deletion Processing, this job could not be cancelled/deleted because component equivalents in jobs [list job numbers] refer to this job.	Do not attempt to cancel or delete a job when there are .cpt Equivalent Component IDs in other jobs that are referenced.	.cpt Multiple fields
0047	For .cpt File Processing, the following fields must all be populated for an equivalent component to be defined that is referencing a different job: .cpt Equivalent User License Code, .cpt Equivalent Component Mail.dat Job ID, and .cpt Equivalent Component ID.	Populate the .cpt Equivalent User License Code, .cpt Equivalent Component Mail.dat Job ID, and .cpt Equivalent Component ID fields.	.cpt Multiple fields
0048	For .cpt File Processing, when an equivalent component is defined within the same job the equivalent component ID must match to another component ID in the .cpt file.	Populate the .cpt Equivalent Component ID field with a value that exists in the .cpt Component ID field.	.cpt Multiple fields
0051	The .cpt Job ID field does not match the .hdr Job ID field.	Populate the .cpt Job ID field with a value that is identical to the .hdr Job ID field.	Multiple files
0052	Required Field Missing: Job ID is a required field in the .cpt file.	Populate the .cpt Job ID field.	.cpt
0053	Required Field Missing: Component ID is a required field in the .cpt file.	Populate the .cpt Component ID field.	.cpt
0054	Component – Periodical Ad Percentage and the Periodical Ad Percentage Status fields are required in the .cpt file when the .cpt Periodical Ad % Treatment field is populated with S = Carries own Ad Percentage . The value provided was {1}.	Populate the .cpt Component – Periodical Ad Percentage and Periodical Ad Percentage Status fields when the .cpt Periodical Ad% Treatment field is populated with S.	.cpt
0056	Required Field Missing: Component Class is a required field in the .cpt file when .cpt Component Rate Type and .cpt Component Process Category are populated.	Populate the .cpt Component – Class field when the .cpt Component – Rate Type and .cpt Component – Processing Category fields are populated.	.cpt

Error Code	Mail.dat Client Error Message	Action	Error Location
0057	Required Field Missing: Component Rate Type is a required field in the .cpt file when .cpt Component Class and .cpt Component Process Category are populated.	Populate the .cpt Component – Rate Type field when the .cpt Component – Class and .cpt Component – Processing Category fields are populated.	.cpt
0058	Required Field Missing: Component Process Category is a required field in the .cpt file when .cpt Component Rate Type and .cpt Component Class are populated.	Populate the .cpt Component – Processing Category field when the .cpt Component – Rate Type and .cpt Component – Class fields are populated.	.cpt
0059	Required Field Missing: Periodical Issue Number is a required field in the .cpt file when .cpt Periodical Volume Number is populated.	Populate the .cpt Periodical Issue Number field when the .cpt Periodical Volume Number field is populated.	.cpt
0060	Required Field Missing: CPT Record Status is a required field in the .cpt file.	Populate the .cpt CPT Record Status field.	.cpt
0062	Required Field Missing: Closing Character is a required field in the .cpt file.	Populate the .cpt Closing Character field..	.cpt
0063	Alphanumeric Data Type Error: Job ID must be an alphanumeric value in the .cpt file.	Populate .cpt Job ID field with an alphanumeric value.	.cpt
0064	Alphanumeric Data Type Error: Component Description must be an alphanumeric value in the .cpt file.	Populate .cpt Component Description field with an alphanumeric value.	.cpt
0066	The .cpt Mailer ID of Mail Owner field must be populated with an alphanumeric value.	Populate .cpt Mailer ID of Mail Owner field with an alphanumeric value.	.cpt
0067	The .cpt CRID of Mail Owner field must be populated with an alphanumeric value.	Populate .cpt CRID of Mail Owner field with a numeric value.	.cpt
0069	Alphanumeric Data Type Error: Periodical Volume Number must be an alphanumeric value in the .cpt file.	Populate .cpt Periodical Volume Number field with an alphanumeric value.	.cpt
0070	Alphanumeric Data Type Error: Periodical Issue Number must be an alphanumeric value in the .cpt file.	Populate .cpt Periodical Issue Number field with an alphanumeric value.	.cpt
0071	The .cpt Periodical Frequency field must be an alphanumeric value.	Populate .cpt Periodical Frequency field with an alphanumeric value.	.cpt
0073	The .cpt Equivalent User License Code field must be populated with an alphanumeric value.	Populate .cpt Equivalent User License Code field with an alphanumeric value.	.cpt
0074	The .cpt Equivalent Mail.dat Job ID field must be populated with an alphanumeric value.	Populate .cpt Weight Equivalent Mail.dat Job ID field with an alphanumeric value.	.cpt
0075	Alphanumeric Data Type Error: Weight Equivalent Component ID must be an alphanumeric value in the .cpt file.	Populate .cpt Weight Equivalent Component ID field with an alphanumeric value.	.cpt
0079	The .cpt Component Title field must be populated with an alphanumeric value.	Populate .cpt Component Title field with an alphanumeric value.	.cpt
0080	The .cpt User Option field must be populated with an alphanumeric value.	Populate .cpt User Option field with an alphanumeric value.	.cpt
0081	The .cpt Reserve field must be populated with an alphanumeric value.	Populate .cpt Reserve field with an alphanumeric value.	.cpt
0082	Numeric Data Type Error: Component – Weight must be a numeric value in the .cpt file.	Populate .cpt Component – Weight field with a numeric value.	.cpt
0083	Numeric Data Type Error: Component – Length must be a numeric value in the .cpt file.	Populate .cpt Component – Length field with a numeric value.	.cpt

Error Code	Mail.dat Client Error Message	Action	Error Location
0084	Numeric Data Type Error: Component – Width must be a numeric value in the .cpt file.	Populate .cpt Component – Width field with a numeric value.	.cpt
0085	Numeric Data Type Error: Component – Thickness must be a numeric value in the .cpt file.	Populate .cpt Component – Thickness field with a numeric value.	.cpt
0086	Numeric Data Type Error: Component – Periodical Ad Percentage must be a numeric value in the .cpt file.	Populate .cpt Component – Periodical Ad Percentage field with a numeric value.	.cpt
0087	Numeric Data Type Error: Ad % Basis must be a numeric value in the .cpt file.	Populate .cpt Ad% Basis field with a numeric value.	.cpt
0089	Date Data Type Error: Periodical Issue Date must be a valid date formatted as YYYYMMDD in the .cpt file.	Populate .seg Automation Coding Date field with a valid date formatted as YYYYMMDD.	.cpt
0090	The value provided for the .cpt Component – Weight: Source field was {1}; it must contain A = Agent (real-time), C = Calculated (formula), P = Postal (clerk), or L = Logical (implied from rate).	Populate the .cpt Component – Weight: Source field with A, C, P, or L.	.cpt
0091	The value provided for the .cpt Component – Weight: Status field was {1}; it must contain N = None Given, P = Pending, F = Final or M = Manifest Weight as function of Rate Interval (not actual).	Populate the .cpt Component – Weight: Status field with N, P, F, or M.	.cpt
0093	The value provided for the .cpt Component – Class field was {1}; it must contain 1 = First Class 2 = Periodicals 3 = Std Mail 4 = Pkg Services 5 = Per Pending or 9 = Other.	Populate the .cpt Component – Class field with 1, 2, 3, 4, 5, or 9.	.cpt
0095	The value provided for the .cpt Component – Processing Category field was {1}; for domestic mailings it must contain LT = Letter FL = Flat CD = Card CM = Custom Mail NP = Non Machinable Parcels MP = Machinable Parcel IR = Irregular Parcel NA = NFM with piece weight < 6oz NB = NFM with piece weight > 6 oz or PF = Parcel, First Class.	Populate the .cpt Component – Processing Category field with LT = Letter FL, CD, CM, NP, MP, IR, NA, NB, or PF.	.cpt
0097	The value provided for the .cpt Periodical Ad % Treatment field was {1}; it must contain B = Ad % not counted, CPT weight added to base piece, S = Carries own Ad Percentage, or N = Not applicable when the .cpt Component – Periodical Ad Percentage field is populated.	Populate the .cpt Periodical Ad% Treatment field with B, S, or N when the .cpt Component – Periodical Ad Percentage field is populated.	.cpt
0099	The value provided for the .cpt Equivalent Component Type field was {1}; it must contain W = Weight; B = Both Weight and Ad%; or Blank = None.	Populate the .cpt Equivalent Component Type field with W, B, or leave blank.	.cpt

Populate an .mpu record for the .seg file when the .hdr Presentation Category field is populated with P or M.	Multiple files
0873	For .mpu File Processing, there is a missing .mpu record matching .cqt Mail Piece Unit ID field.	Populate an .mpu record matching the .cqt Mail Piece Unit ID field.	Multiple files
0879	Alphanumeric Data Type Error: The .oci Original Job ID field must be populated with an alphanumeric value.	Populate the .oci Original Job ID field with an alphanumeric value.	.oci
0880	Alphanumeric Data Type Error: The .oci Original Segment ID field must be populated with an alphanumeric value.	Populate the .oci Original Segment ID field with an alphanumeric value.	.oci
0881	Alphanumeric Data Type Error: The .oci Original Display Container ID field must be populated with an alphanumeric value	Populate the .oci Original Display Container ID field with an alphanumeric value.	.oci
0882	Alphanumeric Data Type Error: the .oci Original Label: IM Container or IM Tray Barcode field must be populated with an alphanumeric value.	Populate the .oci Original Label: IM Container or IM Tray Barcode field with an alphanumeric value.	.oci
0883	Alphanumeric Data Type Error: the .oci Original Mail.XML Mailing Group ID field must be populated with an alphanumeric value.	Populate the .oci Original Mail.XML Mailing Group ID field with an alphanumeric value.	.oci
0884	Alphanumeric Data Type Error: the .oci Original Mail.XML Customer Group ID field must be populated with an alphanumeric value.	Populate the .oci Original Mail.XML Customer Group ID field with an alphanumeric value.	.oci
0885	Alphanumeric Data Type Error: the .oci Reserve field must be populated with an alphanumeric value.	Populate the .oci Reserve field with an alphanumeric value.	.oci
0886	Alphanumeric Data Type Error: The .oci Job ID field must be populated with an alphanumeric value.	Populate the .oci Job ID field with an alphanumeric value.	.oci
0887	Numeric Data Type Error: The .oci Container ID field must be populated with a numeric value.	Populate the .oci Container ID field with a numeric value.	.oci
0888	Numeric Data Type Error: The .oci Original Container ID field must be populated with a numeric value.	Populate the .oci Original Container ID field with a numeric value.	.oci
0889	Numeric Data Type Error: Original Mail.XML Container ID must be a numeric value in the .oci file.	Populate the .oci Original Mail.XML Container ID field with a numeric value.	.oci
0890	The value provided for The .oci OCI Record Status field was {1}; it must contain O = Original, D = Delete, I = Insert, or U = Update.	Populate the .oci Record Status field with O = Original, D = Delete, I = Insert, or U = Update.	.oci
0891	The value provided for The .oci Closing Character field was {1}; it must contain #.	Populate the .oci Closing Character field with #.	.oci

Error Code	Mail.dat Client Error Message	Action	Error Location
0895	Duplicate Record Found: Each .oci record must have a unique combination of Original Job ID, Original User License Code, and Original Container ID.	Populate each record in the .oci file with a unique combination of Original Job ID, Original User License Code, and Original Container ID.	.oci
0898	The value provided for the .cpt Periodical Ad % Treatment field was {1}; it must contain B, N, S B = Ad % not counted, CPT weight added to base piece, N = Not applicable, S = Carries own Ad Percentage or blank.	Populate the .cpt Periodical Ad% Treatment field with B, N, S or leave blank.	.cpt
0900	The value provide for the .cqt Periodicals: Not County/In County field was {1}; it must contain I = In-County or N = Not County.	Populate the .cqt Periodicals: Not County/In County field with I or N.	.cqt
0901	The value provided for The .cqt Periodicals: Sub / Non-Sub / Requestor Indicator field was {1}; it must contain S = Sub N = Non R = Requester or O = Other.	Populate the .cqt Periodicals: Sub / Non-Sub / Requestor Indicator field with S, N, R, or O.	.cqt
0902	The .cqt Periodicals Co-Palletization Discount Indicator field was {1}; it must contain. "Y" = Yes; "N" = No.	Populate the .cwt Periodicals Co-Palletization Discount Indicator field with Y or N.	.cqt
0911	The .pqt Package Level field value provided was {1}; it must be populated with A = Firm when the .cqt Rate Category field is populated FB = Firm Bundle.	Populate the .pqt Package Level field with A when the .cqt Rate Category field is populated with FB.	.pqt, .cqt
0918	Required Field Missing: Job ID is a required field in the .pqt file.	Populate the .pqt Job ID field.	.pqt
0919	Required Field Missing: CQT Database ID is a required field in the .pqt file.	Populate the .pqt CQT Database ID field.	.pqt
0920	Required Field Missing: Package ID is a required field in the .pqt file.	Populate the .pqt Package ID field.	.pqt
0921	Required Field Missing: Package Zip Code is a required field in the .pqt file.	Populate the .pqt Package Zip Code field.	.pqt
0922	Required Field Missing: Number of Copies is a required field in the .pqt file	Populate the .pqt Number of Copies field.	.pqt
0923	Required Field Missing: Number of Pieces is a required field in the .pqt file.	Populate the .pqt Number of Pieces field.	.pqt
0924	Required Field Missing: PQT Record Status is a required field in the .pqt file.	Populate the .pqt PQT Record Status field.	.pqt
0925	Required Field Missing: Package Level is a required field in the .pqt file.	Populate the .pqt Package Level field.	.pqt
0926	Required Field Missing: Closing Character is a required field in the .pqt file.	Populate the .pqt Closing Character field.	.pqt
0927	The .pqt Job ID field must be populated with an alphanumeric value.	Populate the .pqt Job ID field with an alphanumeric value.	.pqt
0928	The .pqt Package ID field must be populated with an alphanumeric value.	Populate the .pqt Package ID field with an alphanumeric value.	.pqt
0929	The .pqt Package ZIP Code field must be populated with an alphanumeric value.	Populate the .pqt Package Zip Code field with an alphanumeric value.	.pqt
0931	The .pqt Reserve field must be populated with an alphanumeric value (when populated).	Populate the .pqt Reserve field with an alphanumeric value when populated.	.pqt
0932	The .pqt Package Carrier Route field must be populated with an alphanumeric value (when populated).	Populate the .pqt Package Carrier Route field with an alphanumeric value when populated.	.pqt

Error Code	Mail.dat Client Error Message	Action	Error Location
0933	The .pqt CQT Database ID field must be populated with a numeric value.	Populate the .pqt CQT Database ID field with a numeric value.	.pqt
0934	The .pqt Number of Copies field must be populated with a numeric value.	Populate the .pqt Number of Copies field with a numeric value.	.pqt
0935	The .pqt Number of Pieces field must be populated with a numeric value.	Populate the .pqt Number of Pieces field with a numeric value.	.pqt
0936	The .pqt Bundle Charge Allocation field must be populated with a numeric value (when populated).	Populate the .pqt Bundle Charge Allocation field with a numeric value when populated.	.pqt
0938	The .pqt PQT Record Status field value provided was {1}; it must contain O = Original, D = Delete, I = Insert or U = Update.	Populate the .pqt PQT Record Status field with O = Original, D = Delete, I = Insert, or U = Update.	.pqt
0939	The .pqt Package Carrier Route field value provided was {1}; it must begin with C, R, H, B, or G (Valid Carrier Route Prefix) followed by 3 numbers with no illegal meta characters.	Populate the .pqt Package Carrier Route field with a value that begins with C, R, H, B, or G followed by a 3 numbers with no illegal meta characters.	.pqt
0940	The .pqt Closing Character field value provided was {1}; it must contain # sign.	Populate the .pqt Closing Character field with #.	.pqt
0944	Each .pqt record must have a unique combination of Job ID, CQT Database ID, and Package ID.	Populate each .pqt record with a unique combination of the following fields: Job ID, CQT Database ID, and Package ID.	.pqt Multiple fields
0945	There must be no characters after the Closing Character.	Remove all characters after the .pqt Closing Character field.	.pqt
0952	Required Field Missing: Job ID is a required field in the .seg file.	Populate .seg Job ID field.	.seg
0953	Required Field Missing: Segment ID is a required field in the .seg file.	Populate .seg Segment ID field.	.seg
0955	Required Field Missing: Logical/Physical Container Indicator is a required field in the .seg file	Populate .seg Logical/Physical Container Indicator field.	.seg
0956	Required Field Missing: Log/Phy Package Indicator is a required field in the .seg file.	Populate .seg Log/Phy Package Indicator field.	.seg
0957	Required Field Missing: LOT Database Date is a required field in the .seg file.	Populate .seg LOT Database Date field.	.seg
0958	Required Field Missing: Verification Facility Name is a required field in the .seg file.	Populated .seg Verification Facility Name field.	.seg
0959	Required Field Missing: Verification Facility ZIP+4 is a required field in the .seg file.	Populate .seg Verification Facility ZIP+4 field.	.seg
0960	Required Field Missing: Automation Coding Date is a required field in the .seg file.	Populate .seg Automation Coding Date field.	.seg
0961	Required Field Missing: Carrier Route Coding Date is a required field in the .seg file.	Populate .seg Carrier Route Coding Date field.	.seg
0962	Required Field Missing: Carrier Route Sequencing Date is a required field in the .seg file.	Populate .seg Carrier Route Sequencing Date field.	.seg
0963	Required Field Missing: Mail Facility ID is a required field in the .seg file.		.seg
0964	Required Field Missing: SEG Record Status is a required field in the .seg file.	Populate .seg SEG Record Status field.	.seg
0965	Required Field Missing: Closing Character is a required field in the .seg file.	Populate .seg Closing Character field.	.seg
0966	The .seg Segment ID field must be populated with an alphanumeric value.	Populate .seg Segment ID field with alphanumeric value.	.seg

Error Code	Mail.dat Client Error Message	Action	Error Location
0967	The .seg Segment Description field must be populated with an alphanumeric value.	Populate .seg Segment Description field with alphanumeric value	.seg
0969	The .seg Verification Facility Name field must be populated with an alphanumeric value.	Populate .seg Verification Facility Name field with alphanumeric value.	.seg
0972	Alphanumeric Data Type Error: Mail Facility ID must be an alphanumeric value in the .seg file.		.seg
0973	The .seg MPA ID for Container and Bundle Charge Method field must be populated with an alphanumeric value.	Populate .seg MPA ID for Container and Bundle Charge Method field with alphanumeric value.	.seg
0974	Alphanumeric Data Type Error: CSA Agreement ID must be an alphanumeric value in the .seg file.		.seg
0975	The .seg User Option Field must be populated with an alphanumeric value.	Populate .seg User Option field with alphanumeric value.	.seg
0976	The .seg Reserve field must be populated with an alphanumeric value.	Populate .seg Reserve field with alphanumeric value.	.seg
0977	Numeric Data Type Error: Verification Facility ZIP+4 to be a numeric value in the .seg file.	Populate .seg Verification Facility ZIP+4 with a numeric value.	.seg
0978	Date Data Type Error: LOT Database Date must be a valid numeric value formatted as YYYYMMDD in the .seg file.	Populate .seg LOT Database Date field with a valid numeric value formatted as YYYYMMDD.	.seg
0979	Date Data Type Error: Automation Coding Date must be a valid numeric value formatted as YYYYMMDD in the .seg file since automation mail exists.	Populate .seg Automation Coding Date field with a valid numeric value formatted as YYYYMMDD.	.seg
0980	Date Data Type Error: Carrier Route Coding Date must be a valid numeric value formatted as YYYYMMDD in the .seg file since carrier route mail exists.	Populate .seg Carrier Route Sequence Date field with a valid numeric value formatted as YYYYMMDD.	.seg
0981	Date Data Type Error: Carrier Route Sequencing Date must be a valid numeric value formatted as YYYYMMDD in the .seg file since carrier route walk sequence mail exists.	Populate .seg Carrier Route Sequencing Date field with a valid numeric value formatted as YYYYMMDD.	.seg
0982	Date Data Type Error: Move Update Date must be a valid numeric value formatted as YYYYMMDD in the .seg file.	Populate .seg Move Update Date field with a valid numeric value formatted as YYYYMMDD.	.seg
0985	Date Data Type Error: Zone Matrix Date must be a valid numeric value formatted as YYYYMMDD in the .seg file.		.seg
0986	The .seg Principal Processing Category field value provided was {1}; it must contain LT = Letter, FL = Flat, CD = Card, CM = Custom Mail, NP = Non Machinable Parcels, MP = Machinable Parcel, IR = Irregular Parcel, or PF = Parcel, First Class.	Populate .seg Principal Processing Category field with LT = Letter, FL = Flat, CD = Card, CM = Custom Mail, NP = Non Machinable Parcels, MP = Machinable Parcel, IR = Irregular Parcel, or PF = Parcel, First Class.	.seg
0987	The .seg Substituted Container Prep field value provided was {1}; it must contain S = Sacks or T = Trays.	Populate .seg Substituted Container Prep field with S = Sacks for Trays or T = Trays for Sacks.	.seg
0988	The .seg Periodicals Newspaper Treatment field value provided was {1}; it must contain Y =Yes or N=No.	Populate .seg Periodicals Newspaper Treatment field with Y = Yes or N = No.	.seg

Error Code	Mail.dat Client Error Message	Action	Error Location
0989	The .seg Logical/Physical Container Indicator field value provided was {1}; it must contain L = Logical container or P = Physical container.	Populate .seg Logical/Physical Container Indicator field with L = Logical Container or P = Physical Container.	.seg
0990	The .seg Log/Phy Package Indicator field value provided was {1}; it must contain L=Logical Package or P= Physical package.	Populate .seg Log/Phy Package Indicator field with L = Logical Package or P = Physical Package.	.seg
0993	The .seg LOT Direction Indicator field value provided was {1}; it must contain F = Forward R = Reverse.	Populate .seg LOT Direction Indicator field with F = Forward or R = Reverse.	.seg
0994	The .seg Barcode Verifier Indicator field value provided was {1}; it must contain Y=Yes or N=No.	Populate .seg Barcode Verifier Indicator field with Y = Yes or N = No.	.seg
0997	The .seg Detached Address Label Indicator field value provided was {1}; it must contain Y = Yes or blank = No, Not applicable.	Populate .seg Detached Mailing Label Indicator field with Y = Yes or blank = No, Not Applicable.	.seg
0998	The .seg Mailing Agreement Type field value provided was {1}; it must contain A = Alternate Mailing System B = Optional Procedure C = Manifest Mailing D = Value Added E = Combined Mail or F = Combined and Value Added.	Populate .seg Mailing Agreement Type field with A = Alternate Mailing System, B = Optional Procedure, C = Manifest Mailing, D = Value Added, E = Combined Mail, or F = Combined or Value Added.	.seg
0999	The .seg Container and Bundle Charge Method field value provided was {1}; it must contain 0 – no publications in the mailing 1 – Charge all to a 3 rd party 2 – Charge all to one of the publications or 3 – proportion by copies to each of the publications.	Populate .seg Container and Bundle Charge Method field with 0 = no publications in the mailing, 1 = Charge all to a 3 rd party, 2 = Charge all to one of the publications, or 3 = proportion by copies to each of the publications.	.seg
1001	The Seamless Acceptance Indicator field contains an invalid value; it must contain 1, 2 or blank.		.seg
1002	The .seg Less Than a Presort Segment Presentation field value provided was {1}; it must contain Y =Yes or N=No when populated.	Populate .seg Less Than a Presort Segment Presentation field with Y = Partial or N = Full Presort when populated.	.seg
1003	The .seg Full-Service Participation Indicator field value provided was {1}; it must contain F = Full Service Option, M = Mixed (Basic and Full Mixed) or blank= None.	Populate .seg Full-Service Participation Indicator field with F = Full Service Option, M = Mixed (Basic and Full Mixed) or blank = none.	.seg
1010	The .pdr Move Update Method field value provided was {1}; it must contain 0 = None 1 = ACS 2 = NCOA Link 3 = FAST Forward 4 = Mailer Move Update Process Certification/Alternative method (99% rule, legal restraint, 100% newly acquired from addressee) 5 = Ancillary Service Endorsements 6 = Multiple 7 = Simplified/Occupant/Exceptional/Alternative Address Format – No move update method needed for this code or 8 = OneCode ACS (when populated).	Populate the .pdr Move Update Method field with 0, 1, 2, 3, 4, 5, 6, 7, or 8 when populated.	.pdr

Error Code	Mail.dat Client Error Message	Action	Error Location
1012	The .seg Move Update Method field value provided was {1}; it must contain 0 = None 1 = ACS 2 = NCOA Link 4 = Mailer Move Update Process Certification/Alternative method (99% rule, legal restraint, 100% newly acquired from addressee) 5 = Ancillary Service Endorsements 6 = Multiple 7 = Simplified/Occupant/Exceptional/Alternative Address Format – No move update method needed for this code or 8 = OneCode ACS (when populated).	Populate .seg Move Update Method field with 0, 1, 2, 4, 5, 6, 7, or 8 (when populated).	.seg
1013	The .seg SEG Record Status field contains an invalid value; it must contain O = Original, D = Delete record, I = Insert record, if not match previous Keys, U = Update with this record, if match to Keys.	Populate .seg SEG Record Status field with O = Original, D = Delete, I = Insert, or U = Update.	.seg
1015	Move Update Date is a required field in the .seg file when the Move Update Method field is not populated with 0 = None, 4 = Mailer Move Update Process Certification/Alternative method (99% rule, legal restraint, 100% newly acquired from addressee), 6 = Multiple 7 = Simplified/Occupant/Exceptional/Alternative Address Format – No move update method needed for this code or 8 = One Code ACS. The value provided was {1}.	Populate .seg Move Update Date field.	.seg Multiple fields
1016	Required Field Missing: Class Defining Preparation is a required field in the .seg file since Principal Processing Category is populated.	Populate .seg Class Defining Preparation field.	.seg Multiple fields

4634	The .cpt Component – Rate Type provided was {1}. The .cpt Component – Rate Type must be E, E1, E2, E4, E5, E6, E7, E8, E9, J, O, K, T, T1, T2, T3, T4, or T5 when the .cpt Component – Class is 1 = First Class and the .hdr Mail.dat Presentation Category is N = Single Piece.	Populate the .cpt Component – Rate Type with E, E1, E2, E4, E5, E6, E7, E8, E9, J, O, K, T, T1, T2, T3, T4, or T5.	.cpt
4636	The Piece Barcode Record .pbc is not supported, when the .mpu Mail Piece Unit – Class field is populated with 1 = First Class, the .mpu Mail Piece Unit – Processing Category field is populated with PF = Parcel, First Class and the .hdr Mail.dat Presentation Category field is populated with N = Single Piece.	Do not attempt to submit a Piece Barcode Record .pbc file, when the .mpu Mail Piece Unit – Class field is 1 = First Class, the .mpu Mail Piece Unit – Processing Category field is PF = Parcel, First Class and the .hdr Mail.dat Presentation Category field is N = Single Piece.	.pbc
4639	The .pdr IM Barcode field must be populated with a valid Impb when the .pdr Impb Barcode Construct field is populated.	Populate the .pdr IM Barcode field with a valid Impb.	.pdr
4640	The .sfr Service Type of AA = Live Animal Transportation Fee is not supported.	Populate the .sfr Service Type field with a valid value other than AA = Live Animal Transportation Fee.	.sfr
4643	A container can only have a single sibling container when the .csm Container Type is AB = Air Box. Container ID {1} has more than one sibling container.	Update the data such that each Air Box only has a single Sibling Container.	.csm

Error Code	Mail.dat Client Error Message	Action	Error Location
4644	When a container uses the .csm Container Type of AB = Air Box, the .seg Logical/Physical Container Indicator must be populated with P = Physical Container.	Update the .seg Logical/Physical Container Indicator to P = Physical Container when using Air Boxes.	.seg
4645	Only Priority, First Class, and Standard mail postage statements with .mpu Mail Piece Unit – Processing Category of LT = Letters or FL = Flats may claim a .ccr Characteristic of PM = Political Mail or EM = Election Mail.	Submit a Priority, First Class, or Standard mail postage statement with .mpu Mail Piece Unit – Processing Category of LT = Letters or FL = Flats to claim a .ccr Characteristic of PM = Political Mail or EM = Election Mail.	.mpu
4646	The .mpu Postage Affixed Type must be blank when the .mpa Postage Payment Method is populated with P = Permit.	Do not populate the .mpu Postage Affixed Type.	.mpu
4647	The .seg Container and Bundle Charge Method field value provided was {1}; it must contain 1 (Charge all to a 3 rd party), 2 (Charge all to one of the publications), or 3 (proportion by copies to each of the publications) when the .seg Class Defining Preparation field is populated with 2 = Periodicals.	Populate the .seg Container and Bundle Charge Method field with 1, 2, or 3 when the .seg Class Defining Preparation field is populated with 2 = Periodicals.	.seg
4648	The .seg eDoc Sender CRID must be the same across all records within the .seg file.	Populate the .seg eDoc Sender CRID will the same value across all records within the .seg file.	.seg
4649	The secondary .mcr Additional Postage MPA ID field must be populated with a value for permit type PI when the .mcr Primary MPA ID field is populated with a value for permit type MT and the .mpa Postage Payment Method field is populated with S = Stamp, L = Metered: Lowest, C = Metered: Correct or M = Metered: Neither. The value provided was {1}.	Populate the secondary .mcr Additional Postage MPA ID field with a value for permit type PI when the .mcr Primary MPA ID field is populated with a value for permit type MT and the .mpa Postage Payment Method field is populated with S, L, C or M.	.mcr
4650	The .cqt Service Level Indicator cannot be populated with F = Full-Service, when the .seg Segment ID associated to the piece has the Detached Mailing Label Indicator populated with A = Detached Address Label.	Full-Service pieces are not eligible to claim DAL lines.	.cqt
4651	Referential Integrity Error: The total number of copies from all .pdr/.pbc records must equal the .cqt Number of Copies for the corresponding CQT DB ID {1}.	Correct the .pdr/.pbc records to match the .cqt Number of Copies for the corresponding CQT DB ID.	Multiple files
4653	The .sfr Service type claimed was {1}. When the .mpu Mail Piece Unit Class is 1 = First Class the .sfr Service Type must be M = Special Handling or NP = Nonbarcoded Parcel Fee.	Populate the .sfr Service Type with M or NP.	.sfr
4660	When the .mpu Rate Schedule is P = Commercial Plus, the .mpa Permit Number provided must be approved for commercial plus pricing.	Update the .mpa Permit Number to an approved commercial plus pricing permit.	.mpu
4676	Total Outside-County copies of this publication issue mailed from all mailing offices must be under 5,000 when the .mpu Rate Type is Y = Regular Limited Circulation or W = Science of Agriculture Limited Circulation.	Do not claim more than 4,999 outside-count copies of a single publication when using .mpu Rate Type of Y = Regular Limited Circulation or W = Science of Agriculture Limited Circulation.	.mpu

Error Code	Mail.dat Client Error Message	Action	Error Location
4760	When submitting a tray-based copalletization consolidator submission, the .csm Postage Statement Mailing Date is required.	Populate the .csm Postage Statement Mailing Date.	.csm

Table 11-2 Mail.dat Client Error Messages

11.3 Mail.dat Client Warning Messages

This is a list of all the possible Mail.dat Client file validation warning messages from the Mail.dat Client. These will display in the Mail.dat client but will not reject the job.

Error Code	Mail.dat Client Warning Message	Action	Error Location
0577	For Full-Service Processing, the .csm Scheduled Induction Date field is required when the .csm Reservation Number and the .csm FAST Content ID fields are populated. The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm Reservation Number and .csm FAST Content ID fields are populated.	.csm
0579	For Full-Service Processing, the .csm Scheduled Induction Date field is required when the .csm CSA Agreement ID is populated, .csm USPS Pick Up field is populated with N = No, .csm Entry Point for Entry Discount – Facility Type field is populated with O = Origin or T = Orig(T-Hub Sq), and .csm Container Status field is populated with R = Ready to pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm CSA Agreement ID is populated, .csm USPS Pick Up field is populated with N, .csm Entry Point for Entry Discount – Facility Type field is populated with O or T, and .csm Container Status field is populated with R or T.	.csm
0580	For Full-Service Processing, the .csm Scheduled Induction Time field is required when the .csm CSA Agreement ID is populated, .csm USPS Pick Up field is populated with N = No, .csm Entry Point for Entry Discount – Facility Type field is populated with O = Origin or T = Orig(T-Hub Sq), and .csm Container Status field is populated with R = Ready to pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Induction Time field when the .csm CSA Agreement ID is populated, .csm USPS Pick Up field is populated with N, .csm Entry Point for Entry Discount – Facility Type field is populated with O or T, and .csm Container Status field is populated with R or T.	.csm
0587	For Full-Service Processing, at least one of the following fields must be populated when the .pdr file is submitted: .mpa Mail Owner's Lcl Permit Ref Num/Int'l Bill Num, .mpa CRID of Mail Owner, .mpa Mailer ID of Mail Owner, .cpt Mailer ID of Mail Owner, .cpt CRID of Mail Owner, or .mpa USPS Publication Number. The value provided was {1}.	Populate one of the following fields when the .pdr file is submitted for Full-Service mailings: .mpa CRID of Mail Owner, .mpa Mailer ID of Mail Owner, .cpt Mailer ID of Mail Owner, .cpt CRID of Mail Owner, or .mpa USPS Publication Number.	Multiple
0588	For Full-Service Processing, at least one of the following fields must be populated when the .pdr file is submitted for Full-Service: .mpa CRID of Mail Preparer or .mpa Mailer ID of Mail Preparer.	Populate either the .mpa CRID of Preparer field or the .mpa Mailer ID of Preparer field when the .pdr file is submitted for Full-Service mailings.	Multiple
0729	Date Data Type Error: Scheduled Induction Date must be a valid numeric value formatted as YYYYMMDD in the .csm file	Populate the .csm Scheduled Induction Date field with a valid numeric value formatted as YYYYMMDD.	.csm

Error Code	Mail.dat Client Warning Message	Action	Error Location
2614	Alphanumeric Data Type Error: The .csm Scheduled Induction Time must be populated with an alphanumeric value formatted as HH:MM (when populated).	Populate the .csm Scheduled Induction Time field with an alphanumeric value formatted as HH:MM.	.csm
3516	The .csm Entry Point – Actual/Delivery Locale Key field must be populated with an alphanumeric value and must contain “ORIGIN” when the Entry Point for Entry Discount – Facility Type field is populated with O = Origin or H = Tran Hub.	Populate the .csm Entry Point – Actual/Delivery – Locale Key field with an alphanumeric value and ORIGIN when the Entry Point for Entry Discount – Facility Type field is populated with O or H.	.csm
3699	Required Field Missing: Scheduled Induction Date is a required field in the .csm file.	Populate the .csm Scheduled Induction Date field.	.csm
3753	For Full-Service mailings, the .csm Scheduled Induction Date field must be populated when the .csm Entry Point for Entry Discount – Facility Type field is populated with D=DDU. The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm Entry Point for Entry Discount – Facility Type field is populated with D.	.csm
3966	For Full-Service Processing, the .csm Scheduled Induction Date field must be within 30 days of the past or present of the .csm Postage Statement Mailing Date.	Populate the .csm Scheduled Induction Date field with a date that is within 30 days of the past or present of the .csm Postage Statement Mailing Date field.	.csm
3985	Required Field Missing: Scheduled Induction Date is a required field in the .csm file when Scheduled Induction Time is present.	Populate the .csm Scheduled Induction Date field when the .csm Scheduled Induction Time field is populated.	
4010	When .csm Container Status is populated with T=Transportation Info Update, the only .csm fields that can be updated are the IM Container or Tray Barcode, 10-Character Container Barcode, Container ID, Reservation Number, FAST Scheduler ID, Scheduled Induction Date, Scheduled Induction Time, Scheduled Ship Date, Scheduled Ship Time, CSA Separation ID, USPS Pick Up, FAST Content ID, Entry Point – Actual/Delivery Locale Code, Entry Point – Actual/Delivery Postal Code, Stop Designator, Truck Or Dispatch Number, eInduction Indicator, and Accept Misshipped fields.	Verify that only the .csm IM Container or Tray Barcode, 10-Character Container Barcode, Container ID, Reservation Number, FAST Scheduler ID, Scheduled Induction Date, Scheduled Induction Time, Scheduled Ship Date, Scheduled Ship Time, CSA Trip ID, USPS Pick Up, FAST Content ID, Entry Point – Actual/Delivery Locale Code, Entry Point – Actual/Delivery Postal Code, Stop Designator, Truck Or Dispatch Number, eInduction Indicator, and Accept Misshipped fields are updated when the .csm Container Status field is populated with T.	.csm
4128	The value provided for The .csm Entry Point – Actual / Delivery – Locale Key field was {1}; it must contain “LOC” followed by 6 alphanumeric characters when the .csm Container Status field is populated with T = Transportation Information Update, the .csm Entry Point for Entry Discount – Facility Type field is populated with O = Origin, K = Origin NDC, L = Origin ASF, J = Origin ADC, C = Origin SCF, Q = Origin AMF, or E = Origin DU and the .seg Full-Service Participation Indicator field is populated with F = Full Service Option or M = Mixed (Basic and Full Mixed).	Populate the .csm Entry Point – Actual / Delivery – Locale Key field with “LOC” followed by 6 alphanumeric characters when the .csm Container Status field is populated with T, the .csm Entry Point for Entry Discount – Facility Type field is populated with O, K, L, J, C, Q, or E and the .seg Full-Service Participation Indicator field is populated with F or M.	Multiple

Error Code	Mail.dat Client Warning Message	Action	Error Location
4149	The value provided for The .csm Entry Point for Entry Discount – Facility Type field was {1}; it must contain A = ASF, B = DNDC, M = Dest AMF, K = Origin NDC, C = Origin SCF, E = Origin DU or O = Origin when the .csm Container Level field is populated with AE = NDC and the .seg Class Defining Preparation field is populated with 6 = Std/Periodicals co-mailings.	Populate the .csm Entry Point for Entry Discount – Facility Type field with A, B, M, K, C, E or O when the .csm Container Level field is populated with AE and the .seg Class Defining Preparation field is populated with 6.	.csm
4237	The .csm Scheduled Induction Date field is required when the .csm USPS Pick Up field is populated with N=No, the .csm Container Status field is populated with T=Transportation info update and the .seg Full Service Participation Indicator field is populated with F=Full Service or M=Mixed (Basic and Full Mixed). The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm USPS Pick Up field is populated with N, the .csm Container Status field is populated with T and the .seg Full Service Participation Indicator field is populated with F or M.	.csm
4238	The .csm Scheduled Induction Time field is required when the .csm USPS Pick Up field is populated with N=No, the .csm Container Status field is populated with R=Ready to pay and the .seg Full Service Participation Indicator field is populated with F=Full Service or M=Mixed (Basic and Full Mixed). The value provided was {1}.	Populate the .csm Scheduled Induction Time field when the .csm USPS Pick Up field is populated with N, the .csm Container Status field is populated with R and the .seg Full Service Participation Indicator field is populated with F or M.	.csm
4239	The .csm Scheduled Induction Time field is required when the .csm USPS Pick Up field is populated with N=No, the .csm Container Status field is populated with T=Transportation info update and the .seg Full Service Participation Indicator field is populated with F=Full Service or M=Mixed (Basic and Full Mixed). The value provided was {1}.	Populate the .csm Scheduled Induction Time field when the .csm USPS Pick Up field is populated with N, the .csm Container Status field is populated with T and the .seg Full Service Participation Indicator field is populated with F or M.	.csm
4251	The STID portion of the Intelligent Mail Barcode in the .pdr file must match the .mpu Mail Piece Unit – Class.	Populate the STID portion of the .pdr IM/TM/ Barcode field with a value that matches the .mpu Mail Piece Unit – Class field.	Multiple
4272	The .csm Scheduled Induction Date field is required when the .csm USPS Pick Up field is populated with N = No, the .csm Container Status field is populated with R = Ready to pay and the .seg Full Service Participation Indicator field is populated with F=Full Service or M=Mixed (Basic and Full Mixed).The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm USPS Pick Up field is populated with N, the .csm Container Status field is populated with R and the .seg Full Service Participation Indicator field is populated with F or M.	.csm
4280	The STID portion of the Intelligent Mail Barcode in the .pbc file must match the .mpu Mail Piece Unit – Class.	Populate the STID portion of the .pbc Barcode field with a value that matches the .mpu Mail Piece Unit – Class field.	Multiple
4330	The .csm eInduction Indicator field must be blank when the .csm Parent Container Reference ID field is not populated and the .csm Container Type field is populated with S = Sack (general), V = Sack (Virtual), 1 = #1 Sack, 2 = #2 Sack, 3 = #3 Sack, 4 = 01V Sack, 5 = 03V Sack, O = 1' Tray, T = 2' Tray, E = EMM Tray, F = Flat Tub, or L =Logical Tray (MLOCR).	Verify that the .csm eInduction Indicator field is blank when the .csm Parent Container Reference ID field is not populated and the .csm Container Type field is populated with S, V, 1, 2, 3, 4, 5, O, T, E, F, or L.	.csm

Error Code	Mail.dat Client Warning Message	Action	Error Location
4390	The .mpa Mailer ID of Preparer or the .mpa CRID of Preparer must be populated when an incentive is claimed.	Populate the .mpa Mailer ID of Preparer or the .mpa CRID of Preparer when an incentive is claimed.	.mpa .ccr
4391	The .cpt Mailer ID of Mail Owner, .mpa Mailer ID of Mail Owner, the .cpt CRID of Mail Owner, or the .mpa CRID of Mail Owner must be populated when an incentive is claimed.	Populate the .cpt Mailer ID of Mail Owner, .mpa Mailer ID of Mail Owner, the .cpt CRID of Mail Owner, or the .mpa CRID of Mail Owner when an incentive is claimed.	.ccr .mpa .cpt
4392	The .mpa CRID of Preparer does not exist.		.ccr .mpa
4393	The .mpa CRID of Mail Owner does not exist.	Update the .mpa CRID of Mail Owner to a valid value.	.ccr .mpa
4415	The .hdr {1} File Status cannot be populated with N when the .hdr {1} Record Count field is populated with a value greater than 0.	Populate the record status field with O, D, R, C or U if the record status is above 0.	
4437	A .pdr or .pbc file must be submitted for a Seamless Parallel Run Mailing.	Please include a .pdr or .pbc file with your Seamless Parallel Run eDoc submission.	Multiple Files
4440	For Seamless Parallel Run processing, the .pdr IM/TM/ Barcode field must be populated with a 20, 25, 29, or 31 character value.	Populate the .pdr IM/TM/ Barcode field a 20, 25, 29, or 31 character value.	.pdr
4442	For Seamless Parallel Run processing, the .pbc Barcode field must be populated with a 20, 25, 29, or 31 character value.	Populate the .pbc Barcode field a 20, 25, 29, or 31 character value.	.pbc
4444	For Seamless Parallel Run processing, the .csm Number of Pieces field is required when the .seg Logical/Physical Container Indicator field is populated with P = Physical Container. The value provided was {1}.	Populate the .csm Number of Piece field when the .seg Logical/Physical Container Indicator field is populated with P.	.csm
4445	For Seamless processing, the .csm Scheduled Ship Date field is required when the .csm USPS Pick Up field is populated with Y = Yes and the .csm Container Status field is populated with R = Ready to Pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Ship Date field when the .csm USPS Pick Up field is Y and the .csm Container Status field is populated with R or T.	.csm
4446	For Seamless Parallel Run processing, the .csm Scheduled Ship Date field is required when the .csm USPS Pick Up field is populated with Y = Yes and the .csm Container Status field is populated with R = Ready to Pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Ship Date field when the .csm USPS Pick Up field is Y and the .csm Container Status field is populated with R or T.	.csm
4447	For Seamless processing, the .csm Scheduled Ship Time field is required when the .csm USPS Pick Up field is populated with Y = Yes and the .csm Container Status field is populated with R = Ready to Pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Ship Time field when the .csm USPS Pick Up field is Y and the .csm Container Status field is populated with R or T	.csm

Error Code	Mail.dat Client Warning Message	Action	Error Location
4448	For Seamless Parallel Run processing, the .csm Scheduled Ship Time field is required when the .csm USPS Pick Up field is populated with Y = Yes and the .csm Container Status field is populated with R = Ready to Pay or T = Transportation Information Update. The value provided was {1}.	Populate the .csm Scheduled Ship Time field when the .csm USPS Pick Up field is Y and the .csm Container Status field is populated with R or T.	.csm
4449	For Seamless processing, the .csm Scheduled Induction Date field is required when the .csm Reservation Number and the .csm FAST Content ID fields are populated. The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm Reservation Number and .csm FAST Content ID fields are populated.	.csm
4450	For Seamless Parallel Run processing, the .csm Scheduled Induction Date field is required when the .csm Reservation Number and the .csm FAST Content ID fields are populated. The value provided was {1}.	Populate the .csm Scheduled Induction Date field when the .csm Reservation Number and .csm FAST Content ID fields are populated.	.csm
4451	For Seamless processing, the .csm Scheduled Induction Time field is required when the .csm Reservation Number and the .csm FAST Content ID fields are populated. The value provided was {1}.	Populate the .csm Scheduled Induction Time field when the .csm Reservation Number and .csm FAST Content ID fields are populated.	.csm
4452	For Seamless Parallel Run processing, the .csm Scheduled Induction Time field is required when the .csm Reservation Number and the .csm FAST Content ID fields are populated. The value provided was {1}.	Populate the .csm Scheduled Induction Time field when the .csm Reservation Number and .csm FAST Content ID fields are populated.	.csm
4454	For Seamless Parallel Run processing, the .csm USPS Pick Up field should be populated with Y – Yes or N – No when the .csm Container Status field is populated with R = Ready to pay or T = Transportation Information Update, and the container is not a sibling.	Populate the .csm USPS Pick Up with Y – Yes or N – No field when the .seg Full-Service Participation field is populated with F or M, the .csm Container Status field is populated with R or T, and the container is not a sibling.	.csm
4455	For Seamless processing, the .csm Scheduled Ship Date field must be within 30 days of the past or present of the .csm Postage Statement Mailing Date.	Populate the .csm Scheduled Ship Date field must be within 30 days of the past or present of the .csm Postage Statement Mailing Date.	.csm
4456	For Seamless Parallel Run processing, the .csm Scheduled Ship Date field must be within 30 days of the past or present of the .csm Postage Statement Mailing Date.	Populate the .csm Scheduled Ship Date field must be within 30 days of the past or present of the .csm Postage Statement Mailing Date.	.csm
4458	For Seamless Parallel Run processing, the value provided for the .csm Entry Point for Entry Discount – Facility Type field was {1}; it cannot contain N = Not Determined when the .csm Container Status is populated with R = Ready to Pay.	Populate the .csm Entry Point for Entry Discount – Facility Type field with a value other than N when the .csm Container Status field is populated with R.	.csm

Error Code	Mail.dat Client Warning Message	Action	Error Location
4464	For Seamless Parallel Run processing, if populated, the .csm CSA Agreement ID field must be populated with a 10 digit numeric value between 1000000000 and 9999999999 when .csm Container Status field is populated with R = Ready to Pay.	Populate the .csm CSA Agreement ID field with a 10 digit numeric value between 1000000000 and 9999999999 when .csm Container Status field is populated with R.	.csm
4466	For Seamless Parallel Run processing, if populated, the .csm Reservation Number field must be populated with (1) a 10 digit value with the format nnnnn + R + mmdd (where n = numeric and mmdd = date of recurring appointment); (2) a 6 character value with the format nnnnn + R; or (3) a 9 digit numeric value between 1000000000 and 9999999999, when the .csm Container Status field is populated with R = Ready to Pay.	Populate the .csm Reservation Number field with (1) a 10 digit value with the format nnnnn + R + mmdd (where n = numeric and mmdd = date of recurring appointment); (2) a 6 character value with the format nnnnn + R; or (3) a 9 digit numeric value between 1000000000 and 9999999999, when the .csm Container Status field is populated with R.	.csm
4471	For Full-Service Processing, at least one of the following fields must be populated when the .pbc file is submitted: .mpa Mail Owner's Lcl Permit Ref Num/Int'l Bill Num, .mpa CRID of Mail Owner, .mpa Mailer ID of Mail Owner, .cpt Mailer ID of Mail Owner, .cpt CRID of Mail Owner, or .mpa USPS Publication Number.	Populate one of the following fields when the .pbc file is submitted for Full-Service mailings: .mpa Mail Owner's Lcl Permit Ref Num/Int'l Bill Num, .mpa CRID of Mail Owner, .mpa Mailer ID of Mail Owner, .cpt Mailer ID of Mail Owner, .cpt CRID of Mail Owner, or .mpa USPS Publication Number.	Multiple
4472	For Full-Service Processing, at least one of the following fields must be populated when the .pbc file is submitted for Full-Service: .mpa CRID of Mail Preparer or .mpa Mailer ID of Mail Preparer.	Populate either the .mpa CRID of Preparer field or the .mpa Mailer ID of Preparer field when the .pbc file is submitted for Full-Service mailings.	Multiple
4531	For {1}, the piece level information is required in either the .pbc or .pdr file.	Include either the .pdr or .pbc file.	
4532	For {%1}, the number of barcodes populated must be greater than {%2} percent threshold, or apply the Nonbarcoded Parcel Fee via the .sfr file. The current percentage is {%3}.	Populate the .pdr IM Barcode or include the Nonbarcoded Parcel Fee in the .sfr file.	.pdr
4539	For {1}, the STC portion of the Impb provided in the .pdr IM Barcode field must match the .mpu Mail Piece Unit – Class. The value provided was {2}.	Populate the STC portion of the barcode with a valid value which matches the .mpu Mail Piece Unit – Class.	.pdr
4545	For {1}, the STID portion of the Imb in the .pdr IM Barcode field must match the .mpu Mail Piece Unit – Class.	Populate the STID portion of the barcode with a valid value which matches the .mpu Mail Piece Unit – Class.	.pdr
4548	For Periodical mailings, containers with container type M = Logical Pallet (MLOCR must be referenced by a physical sibling, when the .csm Container Status is populated with P = Preliminary Postage Statement.	Populate the .csm Sibling Container Reference ID field for a physical sibling when the .csm Container Type field is populated with M.	.csm
4550	The Container ID in the .csm file, with a .csm Container Type of L = Logical Tray (MLOCR) or F = Flat Tub, which has the .csm Supplemental Physical Container ID populated, must have a corresponding Container ID in the .cqt file.	Populate the .cqt Container ID field, with the corresponding .csm Container ID, when the .csm Supplemental Physical Container ID is populated.	.csm

Error Code	Mail.dat Client Warning Message	Action	Error Location
4551	For Periodical mailings, containers with container type V = Sack (Virtual) not marked for co-palletization, must be referenced by a physical sibling, when the .csm Container Status is populated with P = Preliminary Postage Statement.	Populate the .csm Sibling Container Reference ID field for a physical sibling when the .csm Container Type field is populated with V.	.csm
4555	The .cqt Rate Category provided was {1}. When claiming .cqt Rate Category of S = Single Piece for First Class Residual pieces, you must include Automation or Presort pieces.	Populate the .cqt Rate Category with E = 5 Digit Barcode, H = 3 Digit Barcode, L1 = AADC BC, L2 = MxAADC BC, or N = Presort when your .mpu Mail Piece Unit - Class is populated with 1 = First Class, .mpu Mail Piece Unit - Processing Category is LT = Letter, and the .cqt Rate Category is S = Single Piece.	.cqt
4560	For Full-Service or Mixed Service mailings, physical sibling container information is required for Postage Statement finalization, when the .csm Container Type is set to L = Logical Tray (MLOCR) or M = Logical Pallet (MLOCR), .hdr Mail.dat Presentation Category is set to P = Conventional Presort, and .csm Container Status is set to P = Preliminary Postage Statement.	Populate the .csm Sibling Container Reference ID on a physical container, with a Container ID that references a container with a .csm Container Type of L = Logical Tray (MLOCR) or M = Logical Pallet (MLOCR).	.csm
4565	For Full-Service Processing, the Mail.dat Job is currently missing a file required at Ready to Pay; it must contain either a .pdr or .pbc file.	Include either a .pdr, or .pbc file in the mailing.	.csm
4566	For Full-Service or Mixed Service mailings, piece data information in the .pdr or .pbc file will be required when the .csm Container Status field is populated with R=Ready to pay..	Include either a .pdr or .pbc file for containers with a .csm Container Status field populated with R for Full or Mixed Service mailings.	.csm
4567	For Full-Service Processing, the Mail.dat Job is currently missing a file required at Ready to Pay; it must contain or have previously contained either a .pdr or .pbc file.	Include the .pdr or .pbc file when the .csm Container Status field is populated with R for Full-Service mailings.	.csm
4600	For Periodical mailings, containers with container type L = Logical Tray (MLOCR) must be referenced by a physical sibling, when the .csm Container Status is populated with P = Preliminary Postage Statement.	Populate the .csm Sibling Container Reference ID field for a physical sibling when the .csm Container Type field is populated with L.	.csm
4631	For pallets claiming a .csm Container Level of E = FSS Sort Plan, a .pqt Package Level of X = FSS Sort Plan must be used in order to receive DFSS pricing.	Populate the .pqt Package Level field with X = FSS Sort Plan for all packages residing on pallets with .csm Container Level of E = FSS Sort Plan.	.csm
4632	The .pbc Barcode field was populated with an Impb. Imps may only be submitted via a .pdr file using the .pdr IM Barcode field.	Submit Impb via the .pdr IM Barcode field.	.pdr

Table 11-3 Mail.dat Client Warning Messages

11.4 Mail.dat Server Errors Messages

Server validation errors are thrown in the database after a job validates and uploads successfully through the Mail.dat Client application. These errors are thrown when a job contains invalid combinations of data. The server validations

include, qualification report generation checks, and postage statement generation checks that are not performed through the Mail.dat Client Application.

This is a list of all the possible Mail.dat server validation error messages from the Database. Note text in brackets () is explanatory and does not appear in the error message.

Error Code	Mail.dat Server Error Message	Action	Error Location
6000 Series	PostalOne! encountered an internal error during Mail.Dat file load. This will automatically be re-attempted.	Job submission will be automatically re-attempted	File Load
6000 Series	PostalOne! encountered internal errors during Mail.Dat file load. Please contact PostalOne! application support for assistance.	Contact <i>PostalOne!</i> application support.	File Load
6000 Series	PostalOne! encountered an internal error during Mail.Dat validations. This will automatically be re-attempted.	Job submission will be automatically re-attempted	Multiple Files
6000 Series	PostalOne! encountered internal errors during Mail.Dat validations. Please contact PostalOne! application support for assistance.	Contact <i>PostalOne!</i> application support.	Multiple Files
6000 Series	PostalOne! encountered an internal error during the Qualification Report generation process. This will automatically be re-attempted.	Job submission will be automatically re-attempted	Qual Report
6000 Series	PostalOne! encountered internal errors during the Qualification Report generation process. Please contact PostalOne! application support for assistance.	Contact <i>PostalOne!</i> application support.	Qual Report
6000 Series	PostalOne! encountered an internal error during the Postage Statement Generation process. This will automatically be re-attempted.	Job submission will be automatically re-attempted	Postage Statement
6000 Series	PostalOne! encountered internal errors during the Postage Statement Generation process. Please contact PostalOne! application support for assistance.	Contact <i>PostalOne!</i> application support.	Postage Statement
7000	The Sum of CQT pieces/copies do not match the pieces/copies of the associated CSM record.	Verify that the .csm Number of Copies and Pieces is equal to the sum of the .cqt Number of Copies and Pieces.	Multiple Files
7001	The CQT number of pieces does not match the CQT number of copies.	Populate the .cqt Number of Pieces with the same value that is populated in the .cqt Number of Copies field.	.cqt
7002	The PQT number of pieces does not match the PQT number of copies.	Populate the .pqt Number of Pieces with the same value that is populated in the .pqt Number of Copies field.	.pqt
7003	The parent CSM number of pieces does not match the sum of all child CSM pieces.	Populate the .csm Number of Pieces field for the parent container with a value that is equal to the sum of all child .csm Number of Pieces.	.csm
7004	The parent CSM weight does not match the sum of all child CSM weights.	Populate the .csm Total Weight field for the parent container with a value that is equal to the sum of all .csm child weights.	.csm

Error Code	Mail.dat Server Error Message	Action	Error Location
7006	For each .cqt and .pdr CQT Database ID, the number of .pdr records whose .pdr "Wasted or Shortage Piece" Indicator is set to "W" = Wasted piece produced but was spoiled; "S" = Shortage – piece NOT produced; or blank = for all else must equal the .cqt Number of Pieces, the .cqt Number of Copies, or a value in between the .cqt Number of Pieces and .cqt Number of Copies. The value provided was {1}.	Verify that the .pdr records whose .pdr "Wasted or Shortage Piece" Indicator is set to W, S, or blank are equal to the .cqt Number of Pieces, the .cqt Number of Copies, or a value in between the .cqt Number of Pieces and .cqt Number of Copies.	Multiple Files
7007	A valid Finance number could not be found for the .mpa Permit Zip+4. The value provided was {1}.	Populate the .mpa Permit ZIP+4 field with a value that maps back to a valid Finance Number.	Qual Report
7011	A Qualification Report was not generated.	Verify that all fields are populated correctly to create a Qualification Report.	Qual Report
7012	A Shortage/Spoilage adjustment was attempted on an already finalized postage statement. Adjustment could not be made.	All shortage/spoilage adjustments must be made prior to postage statement finalization.	Postage Statement
7013	The PDR Shortage/Spoilage adjustment could not be covered by the associated postage statement. Adjustment could not be made.	Verify that the .pdr Wasted or Shortage Piece Indicator field is populated correct for Shortage/Spoilage adjustments.	Postage Statement
7014	The PAR Shortage/Spoilage adjustment could not be covered by any existing un-finalized postage statement. Adjustment could not be made.	Verify that the fields in the .par file is populated correct for Shortage/Spoilage adjustments.	.par
7017	Parent container does not exist.	Verify that the .csm Parent Container Reference ID field is populated with a valid value.	.csm
7026	Invalid Rate Category/Destination Entry combination. The value provided was {1}.	Populate the .cqt Rate Category and .cqt Destination Entry field with a valid combination.	Postage Statement
7027	{1} statement failed to account for all {2}. Expected: {3}, mapped: {4}. For Postage Statement Seq. Id: {5}, no postage rate was found for this combination of inputs: Seg Id: {6}, Cpt Class: {7}, Ctr Status: {8}, Postg Grouping Id: {9}, Mailing Date: {10}, Customer Ref Id: {11}, Fed Agency Cost Code: {12}, Permit Number: {13}, Permit Zip: {14}, Postage Payment Method: {15}, Permit Type: {16}, Finance Number: {17}, Process Category: {18}, Rate Type: {19}, Mpu Class: {20}, Rate Schedule: {21}, Rate Cat: {22}, CQT Zone: {23}, Number of Pieces: {24}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement

Error Code	Mail.dat Server Error Message	Action	Error Location
7028	{1} statement failed to account for all {2}. Expected: {3}, mapped: {4}. For Postage Statement Seq. Id: {5}, no postage rate was found for this combination of inputs: Seg Id: {6}, Cpt Class: {7}, Ctr Status: {8}, Postg Grouping Id: {9}, Mailing Date: {10}, Customer Ref Id: {11}, Fed Agency Cost Code: {12}, Permit Number: {13}, Permit Zip: {14}, Postage Payment Method: {15}, Permit Type: {16}, Finance Number: {17}, Process Category: {18}, Rate Type: {19}, Mpu Class: {20}, Rate Schedule: {21}, Rate Cat: {22}, CQT Zone: {23}, Number of Pieces: {24}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7029	{1} statement failed to account for all {2}. Expected: {3}, mapped: {4}. For Postage Statement Seq. Id: {5}, no postage rate was found for this combination of inputs: Seg Id: {6}, Cpt Class: {7}, Ctr Status: {8}, Postg Grouping Id: {9}, Mailing Date: {10}, Customer Ref Id: {11}, Fed Agency Cost Code: {12}, Permit Number: {13}, Permit Zip: {14}, Postage Payment Method: {15}, Permit Type: {16}, Finance Number: {17}, Process Category: {18}, Rate Type: {19}, Mpu Class: {20}, Rate Schedule: {21}, Rate Cat: {22}, CQT Zone: {23}, Number of Pieces: {24}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7030	A Periodical or Pending Periodical statement failed to account for all pieces. Expected: {1}, mapped: {2}. For Postage Statement Seq. Id: {3}, no postage rate was found for this combination of inputs: Seg Id: {4}, Cpt Class: {5}, Ctr Status: {6}, Postg Grouping Id: {7}, Mailing Date: {8}, Customer Ref Id: {9}, Fed Agency Cost Code: {10}, Permit Number: {11}, Permit Zip: {12}, Postage Payment Method: {13}, Process Category: {14}, Rate Type: {15}, Mpu Class: {16}, Rate Cat: {17}, CQT Zone: {18}, Number of Pieces: {19}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7031	Invalid Rate Category/In-County Out-County Indicator for Periodical Postage Statements. Invalid Postage Statement value – {1}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7032	Invalid Rate Category used for a Non-Incidental Enclosure Postage Statement. Invalid Rate Category – {1}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7033	A Mail Owner and Mail Preparer were not provided and the submitting user does not have a linked Permit within the Post Office of Mailing from the .mpa Permit ZIP+4	Populate the preparer permit with a valid value that is linked to the user.	Qual Report
7034	All permits in a single version must map to a finance number.	Populate all permits in a single version with values that map to the same finance number.	Qual Report
7042	The duplicate tray barcode percentage is more than the threshold for {1}, actual: {2}, threshold: {3}.	Verify that the job does not include duplicate barcodes.	.csm

Error Code	Mail.dat Server Error Message	Action	Error Location
7046	Total Weight of Host CPT exceeds 20 ounces – {1}.	Populate the .cpt Component – Weight field with a value that is less than or equal to 20 oz.	.cpt
7047	When the Container and Bundle Charge Method field is populated with 2 = Charge all to one of the publications, the MPA ID for Container and Bundle Charge Method field in the .seg file must match an MPA ID in the .mpa file in order to generate Section D (Bundle) Lines on a Postage Statement. The value provided was {1}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7048	When the Container and Bundle Charge Method field is populated with 2 = Charge all to one of the publications, the MPA ID for Container and Bundle Charge Method field in the .seg file must match an MPA ID in the .mpa file in order to generate Section E (Container) Lines on a Postage Statement. The value provided was {1}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7051	An Error was Encountered during Job Status Load.	Server malfunction	Job Status Load
7052	Maximum re-submit attempts; errors encountered during job status load. The value provided was {1}.	Server malfunction	Job Status Load
7053	The .seg Container and Bundle Charge Method 1 is not fully supported and requires manual entry of a container and bundle statement for the third party payer.	A postage statement must be entered manually.	.seg
7054	The .cqt Service Level Indicator must be F when the .seg Full Service Participation Indicator is F = full-service option. The value provided was {1}.	Populate the .cqt Service Level Indicator field with F when the .seg Full-Service Participation Indicator field is F.	Multiple files
7055	The .cqt Service Level Indicator must be F=full-service option for at least one .cqt record when the .seg Full Service Participation Indicator is M=Mixed-service (basic and full mixed).The value provided was {1}.	Populate the .cqt Service Level Indicator field with F for at least one .cqt record when the .seg Full-Service Participation Indicator is populated with M.	Multiple files
7056	The .cqt Service Level Indicator must be populated with B = Basic, P = PostNet or O for other such as non-auto when the .seg Full-Service Participation Indicator field is blank. The value provided was {1}.	Populate the .seg Service Level Indicator field with O, B, or P when the .seg Full-Service Participation Indicator field is blank.	Multiple files
7057	The postage statement for this job has been frozen. Once a postage statement is frozen, containers within that postage statement cannot be canceled. {1}.	Do not attempt to cancel containers that are associated to a frozen postage statement.	Multiple files
7058	Cannot update records whose Record Status is set to O= Original. {1}.	Populate the Record Status field with U for update job submissions.	.hdr
7059	The .csm Label: IM/TM/ Container or IM/TM/ Tray Barcode must be unique below the configurable threshold when the .csm Container Status is R = Ready to pay or T = Transportation Information Update, if after R = Ready to pay or X = Previously Closed or Paid, and the .cqt Service Level Indicator is F = full-service option for the specified .csm Container ID.	Populate the .csm Label: IM/TM/ Container or IM/TM/ Tray Barcode field with a value that is unique below the configurable threshold when the .csm Container Status is R or T and the .cqt Service Level Indicator is F for the specified .csm Container ID.	Multiple Files

Error Code	Mail.dat Server Error Message	Action	Error Location
7060	The .pdr IM/TM/ Barcode must be unique below the configurable threshold ({1}%) when the .csm Container Status is R = Ready to pay, the .cqt Service Level Indicator field is F = Full service option for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing. The percentage duplicate was {2}.	Populate the .pdr IM/TM/ Barcode field with a value that is unique below the configurable threshold when the .csm Container Status is R, the .cqt Service Level Indicator field is F for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing.	Multiple Files
7061	The .pbc Barcode must be unique below the configurable threshold ({1}%) when the .csm Container Status is R= Ready to pay, the .cqt Service Level Indicator field is F=Full service option for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing. The value provided was {2}.	Populate the .pbc Barcode field with a value that is unique below the configurable threshold when the .csm Container Status is R, the .cqt Service Level Indicator field is F for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing.	.pbc
7063	The PBC Shortage/Spoilage adjustment is greater than the postage on the associated postage statement. Adjustment could not be made. {1}.	Adjust the amount of the .pbc Shortage/Spoilage amount to a value that is less than the postage on the associated postage statement.	.pbc
7068	Submission date must be within 30 days of the Postage Statement Mailing Date. The System will only support Transportation Update with Container Status T = Transportation Information Update, if after R = Ready To Pay or X = Previously Closed or Paid. The value provided was {1}.	Submit the job within 30 days of the .csm Postage Statement Mailing Date field value.	.csm
7078	The total postage on the lines for a postage statement does not match the total on the statement's header.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7079	There were duplicate postage statement lines (Section: '%', Line Number: '%') generated for a postage statement with Mail Class ('%').	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7081	A Pending Periodical statement failed to account for all pieces on the standard postage lines. Expected: {1}, mapped: {2}. For Postage Statement Seq. Id: {3}, no postage rate was found for this combination of inputs: Seg Id: {4}, Cpt Class: {5}, Ctr Status: {6}, Postg Grouping Id: {7}, Mailing Date: {8}, Customer Ref Id: {9}, Fed Agency Cost Code: {10}, Permit Number: {11}, Permit Zip: {12}, Postage Payment Method: {13}, Permit Type: {14}, Finance Number: {15}, Process Category: {16}, Rate Type: {17}, Mpu Class: {18}, Number of Pieces: {19}.	Populate Mail.dat fields according to <i>PostalOne!</i> Technical Specification to map to lines correctly.	Postage Statement
7085	There are more than one origin entry offices for the CPP permit. There must be only one origin entry office for a mailing with a CPP permit.	Populate the .mpa Permit Number with a value that has only one origin entry office for the CPP Permit.	Multiple Files
7091	For eInduction processing, the .csm Label: IM Container Or IM Tray Barcode field must be unique within the submitted job.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a unique value within the submitted job.	Multiple Files

Error Code	Mail.dat Server Error Message	Action	Error Location
7092	Referential Integrity Error: The Total Number of Copies from all .pqt child handling unit records must equal the .cqt parent records Number of Copies	Verify that the total Number of Copies from all .pqt child handling unit records is equal to the .cqt parent records Number of Copies	Multiple Files
7093	Referential Integrity Error: The number of child .pdr records must equal a count between the Number of Pieces and the Number of Copies in the parent .csm file.	Verify that the number of child .pdr records is equal to a count between the Number of Pieces and the Number of Copies in the parent .csm file.	Multiple Files
7104	For Seamless, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field must contain exactly 21 characters when the .csm Container Type is P = Pallet, H = EIRS 61 – Hamper, Large Canvas, A = EIRS 61P – Hamper, Large Plastic, G = EIRS 66 – General Purpose Mail Container w/Gate D = EIRS 68 – Eastern Region Mail Container w/Web Door, R = EIRS 84 – Wire Container Rigid, C = EIRS 84C – Collapsible Wire Container, Z = User Pallet, AB = Air Box, B = Bedload, U = Unit Load Device or W = Walled Unit. The value provided was {1}.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with exactly 21 characters when the .csm Container Type is P, H, A, G, D, R, C, Z, AB, B, U, or W.	.csm
7105	For Seamless, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field must begin with 99M when the corresponding .csm Container Type is P = Pallet, H = EIRS 61 – Hamper, Large Canvas, A = EIRS 61P – Hamper, Large Plastic, G = EIRS 66 – General Purpose Mail Container w/Gate D = EIRS 68 – Eastern Region Mail Container w/ Web Door, R = EIRS 84 – Wire Container Rigid, = EIRS 84C – Collapsible Wire Container, Z = User Pallet, AB = Air Box, B = Bedload, U = Unit Load Device or W = Walled Unit. The value provided was {1}.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a value that begins 99M when the corresponding .csm Container Type is P, H, A, G, D, R, C, Z, AB, B, U, or W.	.csm
7106	For Seamless, the .csm Label: IM Container Or IM Tray Barcode field must be unique within the submitted job and amongst all physical pallets associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a unique value within the submitted job and amongst all physical pallets associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	.csm
7107	For Seamless, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field contains an invalid value; it must contain a 24 character lmtb.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a 24 character lmtb.	.csm
7108	For Seamless, the .csm Label: IM Container Or IM Tray Barcode field must be unique within the submitted job and amongst all physical handling units associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a unique value within the submitted job and amongst all physical handling units associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	.csm .seg

Error Code	Mail.dat Server Error Message	Action	Error Location
7115	Referential Integrity Error: The number of child .pbc records must equal a count between the Number of Pieces and the Number of Copies in the parent .csm file	Verify that the number of child .pbc records is equal to a count between the Number of Pieces and the Number of Copies in the parent .csm file.	Multiple Files
7136	More than {1} failures for error code: {2}.		Multiple Files
7151	POSTNET barcode is not eligible for Automation pricing.	Populate the IMTM Barcode or claim a Non-Automation rate.	Multiple Files
7152	For postage statement processing, only one line between lines H1 – H4 of PS Form 3602-R/N may be submitted on a single postage statement when the .mpu Mail Piece Unit Weight is not identical. Combinations of lines H1 and H3 or H2 and H4 may be submitted on a single postage statement if the .mpu Mail Piece Unit Weight is identical.	Update the .mpu Mail Piece Unit Weight to be identical for all mailpieces between lines H1 and H3 or H2 and H4, or break up lines H1 and H3 or H2 and H4 to different postage statement if weight is not identical.	.mpu
7155	The MID and Serial element of the .pdr IM/TM/ Barcode may not be duplicated {1} or more times, by mail class, when the submission is not a simple mailing, the .csm Container Status field is R = Ready to pay, the .cqt Service Level Indicator field is F = Full Service, and the mailing is not setup as a Simple Mailing. The barcode that exceeded the configurable threshold is {2}.	Populate the MID and Serial element of the .pdr IM/TM/ Barcode field with a value that is unique below the configurable threshold, by mail class, when the submission is not a simple mailing, the .csm Container Status field is R, the .cqt Service Level Indicator field is F for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing.	.pdr
7156	The MID and Serial element of the .pbc Barcode may not be duplicated {1} or more times, by mail class, when the submission is not a simple mailing, the .csm Container Status field is R = Ready to pay, the .cqt Service Level Indicator field is F = Full Service. The barcode that exceeded the configurable threshold is {2}.	Populate the .pbc Barcode field with a value that is unique below the configurable threshold when the .csm Container Status is R, the .cqt Service Level Indicator field is F for the specified .csm Container ID, and the mailing is not setup as a Simple Mailing.	.pbc
7166	For Seamless processing, the .pdr IM/TM/ Barcode must be unique below the configurable threshold ({1}%), when the submission is not setup as a simple mailing, and the .csm Container Status is R = Ready to Pay. The value provided was {2}%.	Populate the .pdr IM/TM/ Barcode field with a value that is unique below the configurable threshold, when the submission is not setup as a simple mailing, and the .csm Container Status is R.	.pdr
7170	For Seamless processing the .pbc Barcode must be unique below the configurable threshold ({1}%), when the submission is not setup as a simple mailing. The value provided was {2}.	Populate the .pbc Barcode field with a value that is unique below the configurable threshold, when the submission is not setup as a simple mailing.	.pbc
7172	When multiple .mpa records are provided, the associated CRID determined for the provided .mpa Mailer ID of Preparer does not match the associated Mailer ID determined for the provided .mpa CRID of Preparer of another record, when the associated fields are not populated. Only one Mailing Agent can be identified per mailing.	If your job identifies a separate .mpa Mailer ID of Preparer and .mpa CRID of Preparer, for all .mpa records, make sure the associated CRID determined for the .mpa Mailer ID of Preparer matches the associated MID determined .mpa CRID of Preparer.	N/A
7174	For Postage Statement processing, Form 3602R/N – Section H for Product Samples must be submitted on a separate Postage Statement.		Multiple Fields

Error Code	Mail.dat Server Error Message	Action	Error Location
7175	The CRID {1} of the Permit Holder with the MailPiece Unit Name {2}, Mail Piece Unit ID {3} and Segment ID {4} is not nonprofit authorized.	When the .mpu Mail Piece Unit – Rate Type is N = Nonprofit, please provide a nonprofit eligible Mail Owner in one of the following fields; .cpt Mailer ID of Mail Owner, .mpa Mailer ID of Mail Owner, .cpt CRID of Mail Owner, .mpa CRID of Mail Owner, or .mpa Mail Owner Lcl Permit Ref Number/ Int'l Bill Number and .mpa Mail Owner Lcl Permit Ref Number / Int'l Bill Num – Type.	.mpu
7176	For Seamless processing, the number of child .pbc records must equal a count between the parent .csm Number of Pieces field and the .csm Number of Copies field.	Verify that the number of child .pbc records is equal a count between the parent .csm Number of Pieces field and the .csm Number of Copies field when the .seg Full-Service Participation Indicator field is populated with F or M, and the .csm Container Status field is populated with R.	Multiple
7191	For {1}, the .pdr IM Barcode must either be 31 characters in length with a 9 or 11-Digit .pdr Piece Barcode or is 31 characters in length or less and the .upa Address must be populated for the corresponding .pdr Piece ID or the .sfr Service Type must be populated with NP for the corresponding .pdr Piece ID.	Provide a 31 character IM barcode with a 9 or 11-Digit .pdr Piece Barcode or provide the .upa Address field with corresponding .upa Piece ID or provide the .sfr Service Type of NP with the corresponding .sfr Piece ID.	Multiple
7200	The unique combination of .pdr Piece ID and .pdr CQT Database ID must match the .sfr Piece ID and .sfr CQT Database ID.	Populate the .sfr Piece ID and .sfr CQT Database ID to match the .pdr Piece ID and .pdr CQT Database ID.	Multiple
7201	The unique combination of .pbc PBC Unique ID and .pbc CQT Database ID must match the combination of .sfr Piece ID and .sfr CQT Database ID.	Populate the .sfr Piece ID and .sfr CQT Database ID to match the .pbc PBC Unique ID and .pbc CQT Database ID.	Multiple
7202	A postage statement contains mail piece units both with the Picture Permit Imprint Incentive and without. Pieces claiming the Picture Permit Indicia Incentive must be on their own postage statement.	Update the .mpa Customer Reference ID or .csm Postage Grouping ID to separate Picture Permit Imprint pieces.	Multiple
7206	The .up Piece ID must match the .pdr Piece ID or the .pbc PBC Unique ID	Update the .up Piece ID field to match the .pdr Piece ID or the .pbc PBC Unique ID.	.up
7216	The .pdr IM Barcode was not populated with an Impb. The .pdr IM Barcode must be populated with an Impb when the .mpu Mail Piece Unit – Class is 1 = First Class, the .mpu Mail Piece Unit – Processing Category is PF = Parcels, First Class, and the .hdr Mail.dat Presentation Category is N = Single Piece.	Populate the .pdr IM Barcode with an Impb.	.pdr

Table 11-4 Mail.dat Server Error Messages

11.5 Mail.dat Server Warning Messages

This is a list of all the possible Mail.dat server validation warning messages from the Database. Note text in brackets () is explanatory and does not appear in the error message.

Error Code	Mail.dat Server Warning Message	Action	Error Location
7082	For eInduction processing, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field for Imcb(s)/pallets must be unique amongst all containers associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field for Imcb(s)/pallets with a unique value amongst all containers associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days.	.csm
7083	For eInduction processing, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field for Imcb(s)/pallets must be unique amongst all containers finalized within the last 45 days.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field for Imcb(s)/pallets with a unique amongst all containers finalized within the last 45 days.	.csm
7084	There are zero origin entry offices for the CPP permit. There must be one entry office for a mailing with a CPP permit.	Populate the .mpa Permit Number with a value that has an entry office for the CPP Permit.	Postal Service Permit Data
7096	The permit balance of the .mpa Permit Number {1} and Permit ZIP+4 {2} provided will be negative after postage statement processing.	Add Funds to the .mpa Permit Number	.mpa
7097	The balance of .mpa USPS Publication Number {1} and Permit ZIP+4 {2} provided will be negative after postage statement processing.	Add Funds to the .mpa USPS Publication Number	.mpa
7098	The balance of .mpa Account Number {1} will be negative after Postage Statement processing.	Add funds to the .mpa Account Number.	.mpa
7100	The additional postage permit balance associated to the .mpa Permit Number {1} for Pre-Cancelled Stamps and Permit ZIP+4 {2} provided will be negative after postage statement processing.	Add Funds to the .mpa Permit Number	.mpa
7101	According to the Seamless Acceptance Site, the statement submitted is not eligible for Auto-Finalization. Your statement will not be Auto-Finalized.	Check which Postage Statement types are eligible for Auto-Finalization through the Seamless Acceptance Site for your Seamless Acceptance CRID. Ensure your statement is manually finalized.	.csm
7102	According to the Seamless Acceptance Site, the processing category provided is not eligible for Auto-Finalization. Your statement will not be Auto-Finalized.	Check which Processing Category values are eligible for Auto-Finalization through the Seamless Acceptance Site for your Seamless Acceptance CRID. Ensure your statement is manually finalized.	.csm
7103	According to the Seamless Acceptance Site, the Full Service Participation value provided is not eligible for Auto-Finalization. Your statement will not be Auto-Finalized.	Check which Full Service Participation values are eligible for Auto-Finalization through the Seamless Acceptance Site for your Seamless Acceptance CRID. Ensure your statement is manually finalized.	.csm
7109	For Seamless, containers with container type M= Logical Pallet (MLOCR) must be referenced by a physical sibling with .csm Sibling Container Indicator populated with Y=Yes, and the submission is not setup as a simple mailing.	Populate the .csm Sibling Container Indicator field with Y for a physical sibling when the .csm Container Type field is populated with M, and the submission is not setup as a simple mailing.	.csm

Error Code	Mail.dat Server Warning Message	Action	Error Location
7110	For Seamless, containers with container type L =Logical Tray (MLOCR) must be referenced by a physical sibling with .csm Sibling Container Indicator populated with Y=Yes, and the submission is not setup as a simple mailing.	Populate the .csm Sibling Container Indicator field with Y for a physical sibling when the .csm Container Type field is populated with L, and the submission is not setup as a simple mailing.	.csm
7112	For Seamless, the .csm Entry Point – Actual/Delivery – Locale Key must be populated with a 9 digit alphanumeric value that is not 'ORIGIN' or 'LOCORIGIN.'	Populate the .csm Entry Point – Actual/Delivery – Locale Key field with a 9 digit alphanumeric value that is not 'ORIGIN' or 'LOCORIGIN.'	.csm
7114	The CAPS Credit Account balance associated to the .mpa Permit Number {1} and Permit ZIP+4 {2} provided will be negative after postage statement processing.	Add Funds to the CAPS Credit Account.	.mpa
7116	For Seamless Parallel Run, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field must begin with 99M when the corresponding .csm Container Type is P = Pallet, H = EIRS 61 – Hamper, Large Canvas, A = EIRS 61P – Hamper, Large Plastic, G = EIRS 66 – General Purpose Mail Container w/Gate D = EIRS 68 – Eastern Region Mail Container w/Web Door, R = EIRS 84 – Wire Container Rigid, = EIRS 84C – Collapsible Wire Container, Z = User Pallet, AB = Air Box, B= Bedload, U = Unit Load Device or W = Walled Unit. The value provided was {1}.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a value that begins 99M when the corresponding .csm Container Type is P, H, A, G, D, R, C, Z, AB, B, U, or W.	.csm
7117	For Seamless Parallel Run, the .csm Label: IM Container Or IM Tray Barcode field must be unique within the submitted job and amongst all physical pallets associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a unique value within the submitted job and amongst all physical pallets associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	.csm
7118	For Seamless Parallel Run, the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field contains an invalid value; it must contain a 24 character lmtb.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a 24 character lmtb.	.csm
7119	For Seamless Parallel Run, the .csm Label: IM Container Or IM Tray Barcode field must be unique within the submitted job and amongst all physical handling units associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	Populate the .csm Label: IM/TM/ Container Or IM/TM/ Tray Barcode field with a unique value within the submitted job and amongst all physical handling units associated to the .seg eDoc Sender CRID value that were finalized within the last 45 days of the Postage Statement Mailing Date.	.csm .seg
7120	For Seamless Parallel Run, containers with container type M= Logical Pallet (MLOCR) must be referenced by a physical sibling with .csm Sibling Container Indicator populated with Y=Yes, and the submission is not setup as a simple mailing.	Populate the .csm Sibling Container Indicator field with Y for a physical sibling when the .csm Container Type field is populated with M, and the submission is not setup as a simple mailing.	.csm

Table 11-6 Mail.dat Client Info Message

12. Change History Archive

Section	Title	Release Functionality	Description
---------	-------	-----------------------	-------------

8.2.4	Package Services Mapping	40/January	Added a note for clarification stating: Package Services Parcel Select Sections D, E, F, and G use a Rate Type of P = Parcel Post to map to these lines currently (January 2015). A future release is intended to correct this.
4.2.13	Shipping Services File Generation	40/January	Added information regarding SSF Transaction ID now being populated in a shipping services file and is displayed on the postage statement header.
11.4	Mail.dat Server Errors	40/January	Removed internal server error codes 7018-7025 replaced by 6000 series.
11.6	Mail.dat Client Info Messages	40/January	Removed: 3689. Modified: 7227, 7035, 7036, 4760
4.2.4.8 4.2.4.12 4.2.4.13 4.2.11	Postage Account Record Piece Detail Record Piece Barcode Record Unsupported Mailing Cases	40/January	Updated sections to reflect modified spoilage and shortage functionality. Spoilage or Shortage using a .pdr, .pbc, or .par file for Periodicals, Standard /Periodical Co-Mailings, Package Services Parcels (Non Machinable, Machinable, Irregular) or Priority Mail are not supported. A refund request using PS Form 3533 must be used.

Section	Title	Release Functionality	Description
Various	Various	40/January	Date change on Cover and footers
10	Error Messages	40/January	Removed: 4046, 4257, 4258, 4259, 4260. All have to do with a removed IDEAlliance 13-1 field of Content of Mail.
8.2.1	First Class Mail Postage Statement Mapping	40/January	Changed .mpu Surcharge value on Section C lines 6, 11, 16 from A to N and added CQT Barcode Discount or Surcharge Indicator to S or I.

Section	Title	Release Functionality	Description
1.2	Releases Addressed	40/January	Removed 37.2 release and added 40 release
4.2.1.1	Header File	40/January	Added bullet about when claiming Commercial Plus Pricing a registered Commercial Plus Pricing is used.
4.2.8	Periodicals Validations	40/January	Added note about Limited circulation discount is only being applied to mailings with less than 5000 outside county copies per .mpa USPS publication number.
4.2.13	Shipping Services File	40/January	Updated functionality. A SSF will be generated upon eDoc upload prior to finalization and no longer at finalization.

5.16	Special Fee Charges Record	40/January	Updated Acceptable value from alphanumeric to numeric
8.2.1	First Class and First Class Package Services Mapping	40/January	Added bullet stating Section C lines 7,8,9,10,11 must be mapped using an associated Commercial Plus Pricing Permit when an .mpu rate schedule of P is used.
8.2.5	Priority Mail Mapping	40/January	Added bullet stating that Section A, B, C, D lines must be mapped using an associated Commercial Plus Pricing Permit when an .mpu rate schedule of P is used.
11	Error Messages	40/January	Added: 4660, 4676, 4760, 7231, 7234, 7236 Modified: 4228 Removed: 7217
Entire Document	All	40/January	Updated the description of .seg Class Defining Preparation of 6 = Std/Periodicals/CPM Co-Mailings to 6 = Std/Periodicals Co-Mailings.

Section	Title	Release Functionality	Description
All	All	39/November	Updated typo of .sir to .sfr
4.2.11	Unsupported Mailing Cases	39/November	Added bullet to state Spoilage and shortage is not supported for Priority Mail, Bound Printed Matter, or Periodicals statements. The refund must be made using PS Form 3533.
5.2.10	Container Quantity Record	39/November	Added rate category of FC to applicable Bound Printed Matter Rate Categories.
Section	Title	Release Functionality	Description
8.2	Mail.dat Postage Statement Mapping	39/November	PS Form 3541 Part A and C updates for weight limits

Section	Title	Release Functionality	Description
11	Error Messages	39/November	Removed error code 4642, 4210 (ETR10239) Modified error code 7175 (Nonprofit authorization) Added error codes 7229, 7230, 4555 (ETR10260)

Section	Title	Release Functionality	Description
4.2.8.1	Air Box Validations	39/November	Updated Air Box Constraints <ul style="list-style-type: none"> Air Box containers must have the .seg Logical/Physical Container Indicator populated with P

			<ul style="list-style-type: none"> - Sibling Air Box containers do not require Total Weight populated - Each Air Box container may only have a single sibling container - Sibling containers will be charged as a sack regardless of Total Weight field
4.3.5	Nonprofit Postage Statement ByFor	39/November	Added new section outlining Nonprofit Mail Owner order of Precedence and Nonprofit authorization
5.2	Segment Record	39/November	Added comment to Container and Bundle Charge Method field to use a non zero value for periodicals and zero value for all non-periodical jobs
5.3	Mail Piece Unit Record	39/November	Added comment in Postage Affixed Type field to state that this cannot be populated when the .mpa Postage Payment Method is P
5.7	Un-coded Parcel Address	39/November	Added comment to Address field stating acceptable values
11	Error Messages	39/November	Added: 7175, 4648, 4647, 4646, 4644, 4543, Modified: 4519, 1149 Removed: 3786, 3826, 3828
4.2.8	Periodical Validations	39/November	Added bullet for bundle charges with both In-County and Outside-County pieces.

Section	Title	Release Functionality	Description
6.7.1	BPM Parcels for Pending PE	July/38	Updated BPM Parcels mapping for Pending Periodicals – removed all but zones 1&2 and DDU.
8.2.4	Package Services PS 3605	July/38	Switched lines A76 and A78 to match finalized postage statement
8.2.2	Periodicals Mapping	July/38	Updated Container Level values for lines D1-7 to be AB, AG, AH
4.2.5.3	Internal and External Copalletization	July/38	Added new section on internal and external copalletization
4.2.4.1	HDR File	July/38	Removed old values of I and S for Mail.dat HDR Presentation Category. Added new descriptions for values, P, N, M, C and E.
1.2	Releases Addressed	July/38	Updated Release dates and submission dates for IDEAlliance based on new deployment dates
4.2.13	Shipping Services File Generation	July/38	Added pdr file are 5, 9, or 11 digits in length required for Piece Barcode Modified warning validation 7197 and removed warning validation 7198
5.1	.hdr Record	July/38	Added new fields of Special Fee/Charge Barcode Record Count and Record Status to .hdr file. Note: PostalOne! does not currently support the .SFRB file.

			Updated allowable values in the Mail.dat Presentation Category to be M, P, N, C, E
--	--	--	--

Section	Title	Release Functionality	Description
5.7	Component Characteristics File	July-38	Updated Content values for 14-1. VV = Political Mail, PI = Election Mail Added bullet about Election Mail and Political Mail not being allowed on the same postage statement
4.2.4.6	MailPiece Unit File	July-38	Added bullet about .mpu Surcharge equals Dim Weight how the weight is calculated
4.2.4.9	ContainerSummaryRecord	July-38	Added bullet about Entry Point for Entry Discount being used to assign a Local Key to a facility on Postage Statement Register.
4.2.13	Product Tracking System Constraints	July-38	Updated table 4-13 with acceptable .mpu Rate Types for Package Services Added new chart: Electronic File Name Dynamic Fields Removed Mailer ID of Mail Owner population for SSF Generation
4.3.1.2	Periodicals Key Postage Statement Generation Fields	July-38	Added Entry Point for Entry Facility – Locale Key as a Periodical Postage Statement Generation Variable
5.16	Special Fees/ Charges Record	July-38	Listed out applicable service types allowed by mail class
8.2	Mail.dat Postage Statement Mapping	July-38	Removed S25 as an applicable line for FC, SM, and BPM mailings. (removed from July scope only valid in PM) Removed Package Services new line G6 (removed from July) Periodicals Section D lines 4,6 added AG, AH as container level values (CR July)
4.2.5.3	FSS within Mixed Class Mailings and Comail	July-38	New section stating what classes of mail can be co mails within FSS
11	Error Messages	July-38	Added/Modified: 0863, 3520, 3682, 4613, 4634, 4638, 4639, 4640, 4445, 4447, 4455, 4539. 4545, 7222, 7223, 7224, 7225, 7197 Removed: 4154, 4157, 4159, 4160, 4196, 4284, 4291, 4541, 4628, 4629, 4630, 4535, 4536, 4537, 4561, 7213, 7214, 7189, 7198
5.7	Component Characteristics Record	37.2 April	Updated 2014 Promotions chart to include footnote 7 ⁷ For Mail.dat 13-1 and Mail.XML 13.0A/13.0B, the value “IV” is supported for indicating Premium Advertising in the eDoc, beginning April 6, 2014

11	Error Messages	37.2 April	Added/Modified the following errors to support April patch release Added: 4559, 7216, 4611, 7217, 4612, 4613, 4633, 4634, 4635, 4636 Modified: 7191, 0534, 0843, 0857, 3520, 3682, 4048, 4555, 4596, 4532, 4533, 4047, 4049, 1151, 3804, 3805, 3806, 3807, 3808, 3809, 3810, 3939
8.2.5	Priority Mail Mapping	37.2 April	Updated PM Section A line mappings Note: Section A lines 1-20 are supported in April Patch, remaining PM lines are supported in July 2014 release
